Andrea Jurkiewicz, Assessor
Columbia County
230 Strand Street Rm. 331
St. Helens, OR 97051

Columbia County 2023 Assessor's Certified Ratio Study Acceptance

The Department's Mass Appraisal Review team has completed its required review of your *2023 Assessor Certified Ratio Study* report and accepts its findings.

In accordance with ORS 309.200 the county assessor has produced and timely filed a ratio study report and appraisal plan that documents achievement of the 100% real market value (RMV) standard for the forthcoming assessment roll as required by ORS 308.232. Any significant changes made to the reported RMV adjustment program must be documented and forwarded to the mass appraisal team at MassAppraisal.Team@dor.oregon.gov

Your appraisal / valuation plan is yet to be received and is due on or before November 1, 2023.

In accordance with ORS 309.203(1) the Department recommends you continue to maintain accurate property records and values which are extremely important to the maintenance of the county's property tax program.

Our mass appraisal team is available to assist with your real market value mass appraisal programs. If you have questions, please contact any of the CMART team members via email at MassAppraisal.Team@dor.oregon.gov.

Sincerely,

Roxanne Gillespie, MAI, Manager
Program Assistance
Property Tax Division

Certification and Analysis of Valuation Methods and Procedures

State of Oregon)
)
) SS.
County of Columbia)

I, Andrea Jurkiewicz, Assessor of Columbia County, State of Oregon, do hereby certify that I have prepared a ratio study for the current tax year according to ORS 309.200 and the guidelines developed by the Department of Revenue. Additionally, the attached is a complete and accurate copy of the original now on file in my office.

I further certify that the ratios and adjustments identified in this study will achieve 100% of real market value for real property and manufactured structures for the current year. This report is given to the Department of Revenue and will be given to the Clerk of the Board of Property Tax Appeals to provide current knowledge of the adjustment program used by my office.

A handwritten signature in black ink that reads "Andrea Jurkiewicz".

INTRODUCTION

Ratio Study Purpose

The purpose of Ratio Study is to measure the level of appraised value in relation to the market value as of the assessment date of January 1. For 2023, this is the relationship between the base set-up real market values for all re-calculated or re-appraised areas.

Furthermore, the Ratio Study's purpose is to document the analysis and to identify adjustment factors that will achieve 100% of Real Market Value (RMV). As an additional benefit, this study is a valuable tool for managing appraisal and adjustment programs.

Columbia County is divided into six (6) appraisal areas as illustrated on the County map included in this report. These appraisal areas are referred to as "Maintenance Areas" (MA). Within each maintenance area, properties are grouped further for market analysis and adjustments by using Study Area (SA), Property Class, or RMV Class designations.

In addition to the six Maintenance Areas, there is a MA 7 that is designated for personal property manufactured structures located throughout Columbia County. This MA is not illustrated on the County Map but is referenced on the area list.

The Ratio Study

The format of the Ratio Study is intended to reflect the adjustment program as defined by Oregon Administrative Rule (OAR) 150-309-0230. Most notably are the "Summary of Ratio Indications" and the "Market Area Conclusions and Adjustments" sections of this study. The remaining sections lend additional support and provide explanation of the adjustment.

Recalculation Base Setup Value

An analysis and study of value is performed annually by appraisal staff for land, on-site development costs, local cost modifiers, depreciation schedules, etc. This process is referred to as a "Setup" study. The conclusion from this study is the Jan 1st Base Real Market Value before the ratio study adjustments and trends are applied.

RMV Class Market Perception (trending) versus Property Classification groupings

Refer to the "Property Class and RMV Class Descriptions and Counts" section for a list of the RMV Classes and corresponding Property Class.

RMV Class – A market grouping intended for organizing data and used for *trending* purposes. Also, this grouping represents how knowledgeable sellers and buyers perceive properties as well as how those properties move on the open market.

Property Class – A basic classification grouping of similar property types in order to provide uniformity and consistency in valuation. This classification is based on the Highest and Best Use of the property except for specially assessed properties.

Historically, market perception in Columbia County has not indicated a dissimilarity of value between Property Class 4XX Rural Residential properties or Property Class 5XX/6XX Specially Assessed properties which are under the farm or forest programs and have specially assessed values (SAV/MSAV) allocated to them. These special assessment programs provide a property owner a tax

break for meeting the bare minimum requirements. For example: 12 chickens and a cow or planting just enough trees in order to qualify. Routinely, the owner/buyer performs the minimum in order to meet the requirements to receive the tax break that the specially assessed values for PC 5XX and PC 6XX affords them.

Since there is little market perception in Columbia County which shows a difference between PC 4XX, 5XX and 6XX properties, these property classifications have been assigned the RMV Class 4XX grouping for *trending* the Real Market Value (not the specially assessed values). Market indications illustrate that these specially assessed properties are typically purchased for their acreage and rural "feel" and not because they are under special assessment classification for a farm or forest operation.

Due to the limitations of the current assessment system software, RMV Class is the only way to gather market groupings for each study and to apply trends.

Summary of Ratio Indicators

This summarizes the adjustments by MA, SA, and Neighborhood (NH). Adjustments are made in general categories by RMV Class:

1. Residential Urban (RMV class 1XX); Rural Tract (RMV class 4XX or 8XX) - This includes residential land, single family site-built dwellings, real property manufactured structures, condominium's, 2 to 4-unit multi-family properties within the city limits and rural properties which include small rural residential parcels to large farm and forest parcels.
2. Commercial (RMV class 2XX) and Industrial (RMV class 3XX) - This includes commercial and industrial properties appraised by the County in urban or rural locations.
3. Others: this is for properties that do not fit well into any of the categories, or they may be better reported as a separate group.

Sales Trimming for Ratio Trending

When performing an analysis of the sales for a dataset, there may be ratios that are either very high or very low in the array. These are commonly referred to as "outliers". These outlying ratios require further investigation to identify whether the sale is deemed "usable" for the ratio trending analysis. In addition, there may be other extreme circumstances surrounding the sale that would result in a skewed ratio.

If the sale is deemed not beneficial to the analysis, then the sale should be "trimmed" from the array. The two standard methods of trimming sales are "Trimmed Mean" and the "Interquartile Range". Removing ratio outliers is not a mandatory practice but is appropriate when drawing a conclusion about trending and sales data. If the decision is made to trim outliers, then this task must be performed using one of the approved methods before the process of analyzing the sale datasets.

For this Ratio Study, a trimming method was not applied since all usable sales were deemed appropriate for ratio analysis and trending purposes.

Time Study Purpose

The purpose for performing a time study is to measure the movement of value over a period of time. In this case, sales data is analyzed and an adjustment factor (shown as a percent) is developed to bring the sales price to the January 1 assessment date.

Three separate time studies have been performed: one for the RMV Class 1XX properties, another for the RMV Class 4XX properties, and one for Personal Property Manufactured Structures RMV Class 019. For Floating Properties (RMV Class 111), Commercial (RMV Class 2XX), and Industrial (RMV Class 3XX) properties, no time adjustment study was performed due to the lack of sales data available.

The Direct Calculation analysis was deemed as the best technique to adjust the sales price for movement over time. This method was applied to the RMV Class 1XX, 4XX, and 019 properties. The conclusion from the time study is applied to adjust the Sales Price to the January 1st assessment date for this ratio year, then a central tendency (Mean, Median, Weighted Mean or Geometric Mean) is selected as the best indicator for the trend results.

A Ratio Study Report

Following are the essential elements that comprise a Ratio Study report. As outlined, a study includes the individual report for an area or areas, as well as the supporting sales listings and statistical data.

Market grouping

The current assessment system in use allows for adjusting values by market group using stratification and combination. Stratification means splitting a large group of properties into separate groups based on market differences. Conversely, combination means combining properties from separate groups with similar market characteristics.

Due to the limitations of the Helion Ratio Study software, RMV Class is the only way to gather market groupings for organizing sales data for trending purposes. After the RMV class is selected, the data is further stratified or combined by maintenance area, study areas and/or further defined by location, type of property or by those that have a special use.

Every study is two or more pages in length and identifies the RMV Class, maintenance area(s), study area(s), illustrates the calculation of the adjustment, and further explains how the factors used in the calculation were selected. Furthermore, each study includes a list of sales with related market groupings and statistics. A separate ratio report is completed for most County assessed properties and a trend conclusion is determined regardless of the sales data available.

Elements of each ratio study report

1. Study Definition. The upper portion of the report identifies the market grouping for the study. After selecting the RMV class, the market groupings are further defined by Maintenance Area (MA) and Study Area (SA) followed by a general description.
2. The Adjustment Calculation Summary. This section includes the January 1st base recalculation values and population counts. The following are identified:
 - a. The number of sales used.

- b. The total size of the population in the study.
- c. The Sales as a percentage of the population.
- d. The Population Values area identifies values of the population by Land RMV, On-site Development RMV, Residential Improvement RMV and Farm/Ancillary buildings RMV as it is documented in the Assessor file for the sales collection year. These values are shown as dollar amounts and as a percentage of the total RMV both before and after adjustment.
Note: the heading "Prior Year Population Values" is not an accurate title for this section and a request to fix this heading has been submitted to our software developer.
 - i. Pre-Trend Values – the total of the Jan 1st base recalculation values by fragment item (Land RMV, OSD RMV, Improvement RMV and Farm Improvement RMV).
 - ii. Post Trend Values – the pre-trend values multiplied by the adjustment factor for each value item (Land RMV, OSD RMV, Improvement RMV and Farm Improvement RMV) as determined in the study.
- e. The "Selected Ratio from Sales" is the chosen central tendency after the time adjustment conclusion has been applied to the sales price, bringing the sales price to the Jan 1st assessment date. This ratio is either the mean, median, weighted mean or geometric mean. The ratio selections are based on the following principles:
 - i. No single sale should have a large influence on the ratio indications. The objective is to avoid a mean distorted by an extreme ratio, a weighted mean influenced by high valued properties and to avoid a median when gaps exist in the middle of the frequency distribution.
 - ii. Ratios above and below 100 can be a result of being at or near market. A single trend will result in half the properties being over market and half being under market. A single trend cannot reduce the distribution of ratios within the group.
 - iii. If an adjustment is clearly needed then it is applied. Similarly, the ratio adjustment with the greatest support is applied.
 - iv. Reliability fluctuates. It is dependent upon the size of the sample and the variability within the sample. Therefore, the central tendencies will lie within a range of reliable conclusions.
- f. The "Time Trend Adjustment" is the conclusion from the time study as an annual percent adjustment. To arrive at a time adjustment conclusion, the prior year certified real market value and the collected sales by property class are used.
- g. The "Before Ratio" is the selected time adjusted central tendency.
- h. The "Overall Adjustment Factor" is needed to bring the current year RMV to the statutorily required 100% real market value as of the January 1 assessment date. It is calculated by dividing 1 by the Before Ratio. For improved properties, the overall adjustment factor is separated into the following line fragments:
 - i. Land Adjustment Factor: the adjustment by which the land portion of a property is adjusted. It usually is the land adjustment factor used in the analysis of unimproved land within the same MA and SA. However, the adjustment may be from the analysis of the improved RMV class if an insufficient sales sample of unimproved land is not available.

- ii. OSD Adjustment Factor: the adjustment factor that brings the site improvement portion of the property to 100% of RMV. This value is a separate component for improved properties however will be an adjustment of 100 for this year.
 - iii. Residential Improvement Factor: the adjustment factor needed to bring the residential and associated improvements to 100% of RMV as part of the overall adjustment.
 - iv. Farm Improvement Adjustment: the adjustment factor applied as part of the overall adjustment that will bring outbuildings and other ancillary structures to 100% real market value.
- 3. The “After Ratio” measures the valuation to be sure it meets 100% real market value requirements as outlined in statute. The After Ratio is calculated by applying the adjustment from the study to the base RMV on a value item basis (Land, OSD, Improvement and Farm Improvement). This value is referred to as the “After RMV”. Next, the After RMV is divided by the Time Adjusted Sales Price to return an After Ratio for each sale in the array. Central tendencies are then calculated from the After Ratio(s) to fulfill the statutory requirements and to "test" the County's ratio study program.
- 4. Explanation: this is a written statement explaining which central tendency was selected in the analysis. If other factors contributed to the conclusion, they may be mentioned here as well.
- 5. Performance History. The following are historical displays of performance and valuation (See also Statistical Data and Measures):
 - a. Coefficient of Dispersion (COD). The COD is calculated using the central tendencies Sales After Ratio. At the bottom of the report, a timeline showing the history of COD ranges can be found. The acceptable measurement of COD uniformity is when the percentage range is between 10 and 20. A COD higher than the maximum allowed for the property classification is an indication that the classification may have a valuation problem.
 - b. Price Related Differential (PRD). The PRD history measures the vertical equity of the RMV. The measurements of vertical equity are defined as:
 - i. Regressive: a PRD above 1.00 suggests that the high-valued properties are under-appraised and the low-valued properties are over-appraised.
 - ii. Progressive: a PRD less than 1.00 suggests that high-value properties are over-appraised and low-valued properties are under-appraised.
 - iii. An ideal PRD is within the range of .98 to 1.03.
- 6. Statistical Data and Measures: As with all statistical analysis, the accuracy of each conclusion depends on a sufficient sample size that properly represents the population of an area. Judgements about grouping properties in order to gain reasonably accurate results are primarily based on creating an adequate sample size of study areas that move similarly in the market. Descriptive statistics are found on the second page of each ratio study and are split into two categories:
 - a. Statistics of Central Tendency – the center, middle or typical element in a dataset shown in two columns: the “Sales (Ratio)” and the “Sales (After Ratio)”. These are generally assumed to reflect the level of appraised value relative to the market value. However, the central tendency ratios must be analyzed in some detail to produce reasonably accurate trend conclusions. The central tendency measurements are comprised of the following:

- i. The “Sales (Ratio)” column: Also referred to as the “before ratio”, this column reflects the ratios determined by taking the base RMV divided by the time-adjusted sale price.
 - Median: the middle ratio of an array. It is a positional ratio and if gaps are present near the center of the data set then the Median may be an unreliable measurement.
 - Mean: traditionally referred to as the “average”, the mean is the sum of all the ratios divided by the number of ratios. Because it uses all the ratios in an array, it is easily distorted by extreme high and low ratios.
 - Weighted Mean: the sum of the total RMV divided by the sum or the total Sale Price. The sales with relatively high prices will have the most effect on this measure.
 - Geometric Mean: the “Nth” root of the product of the ratios, where “N” is the number of ratios in the array.
- ii. The “Sales (After Ratio)” column: these central tendencies represent the adjusted ratios by using the calculation of the adjusted base RMV divided by the adjusted Sale Price.
 - Median: the middle ratio of an array. It is a positional ratio and if gaps are present near the center of the data set then the Median may be an unreliable measurement.
 - Mean: traditionally referred to as the “average”, the mean is the sum of all the ratios divided by the number of ratios. Because it uses all the ratios in an array, it is easily distorted by extreme high and low ratios.
 - Weighted Mean: the sum of the total RMV divided by the sum or the total Sale Price. The sales with relatively high prices will have the most effect on this measure.
 - Geometric Mean: the “Nth” root of the product of the ratios, where “N” is the number of ratios in the array.
- b. Statistics of Distribution: this performance measurement describes how values are distributed within the group by illustrating how far the ratios are from the central tendency. Care must be taken not to “read too much” into the distribution statistics but rather to use them as an indication of the accuracy or consistency of RMV within the marketplace. If the sample is relatively small, the conclusion of the distribution may be unreliable.
 - i. Frequency Distribution: this is a graph and numeric display of the distribution of sales by ratio range. Both the Sales Ratio and After Sales Ratio are plotted.
 - ii. The Chart of Central Tendencies: this chart plots the number sales and the corresponding central tendency for each month within a sales collection year. These monthly central tendencies are determined by using the time adjusted ratios from the sales array. The time adjusted ratios are calculated by taking the unadjusted base RMV and dividing it by the time adjusted sale price for each sale.
 - iii. Average Deviation (AD) – the average of the differences between each ratio and the Median for the entire grouping.

- iv. Coefficient of Dispersion (COD) – measures the uniformity of RMV and is the average deviation from the Median converted to a percentage. As displayed on the report, the COD reflects the time adjusted “Sales Ratio” (Before Ratio) COD (not the “After Ratio” COD). As outlined in OAR 150-308-0380, the current “working” COD standards are:

Type of Property	Maximum COD
Vacant land RMV Class, 100, 400	20%
Real MS and PPMS RMV Class XX9	25%
Urban Improved RMV Class 101	
Homogenous	10%
Non-Homogenous	15%
Rural Improved RMV Class 401	20%
Apartments RMV Class 701	12%
Commercial Improved RMV Class 201 –	
Large Urban	15%
Smaller Urban	20%
Industrial	No standard has been set
Floating Property	No standard has been set

- v. Standard Deviation (SD) – a measure of deviation from the Mean for a normally distributed population. For this statistic to be useful, the population and the sales sample must meet relatively strict statistical standards. Therefore, it is considered less useful for a typical standard appraisal analysis than the COD.
- vi. Coefficient of Variance (COV) – the standard deviation from the Mean, converted to a percentage. This is a measure of uniformity.
- vii. Price Related Differential (PRD) – a measure of vertical equity that tests whether appraisals are reasonably equal between high and low value properties. It is calculated by dividing the Mean by the Weighted Mean.
- The PRD standard is a range between 98% to 103%
- viii. 95% Confidence Level – a calculation of uniformity used to determine the reliability that the sales array is representative of the population. This number is expressed as a percentage. The lower the percentage the greater the reliability. Conversely, the higher the percentage the lower the reliability.

7. List of “Included Sales” used in the analysis. The sales data reflects the Jan 1st assessment date and are listed as follows:

- a. For most studies, listings are used of sold properties that meet the definition of an arms-length sale. Each sale is identified by MA, SA, Neighborhood and RMV Class. Once identified, then additional details are provided to describe the individual properties. Next, a ratio is determined for each sale then statistical data is calculated for the entire grouping and displayed. The major components are as follows:

- i. Maintenance Area (MA): one of the seven appraisal areas.
- ii. Study Area (SA): market identification code.
- iii. Neighborhood (NH): this identifier is not used at this time and the current designation is "000".
- iv. Property Class (PRP CLS): a three-digit number identifying the type of property based on Highest and Best Use (except for specially assessed property).
- v. Stat Class (ST CLS): the building type of main structure included in the sale.
- vi. Condition Code (CO CD): Sales are identified by a code illustrating whether a sale is confirmed or not confirmed. The current condition codes in use are as follows:

Code	Description
01	Change of use
02	Deed doesn't show warranty of title (QC)
03	Grantee/grantor is a political subdivision/gov't agency
04	Lender foreclosure, grantee/grantor is a bank or other financial inst.
05	Grantee/grantor is charitable, religious, or other institution
06	Grantee/grantor are related or business associates
07	Conveyance of partial or divided interest
08	Grantee and grantor are the same, convenience
09	Exchange of properties (trade)
10	Short sale or conveyance to avoid foreclosure/lien
11	Grantor is sheriff, court officer, receiver, guardian, trustee
12	Contract payoff
13	Critical field on deed/document left blank (consideration, date of sale, etc.)
14	Prior year sale
16	Sale includes personal property not accurately extracted (blue sky, goodwill)
17	Sale includes orchards, crops or other exempt property
20	Other errors or omissions
21	Property sold not same as assessed (LLA, PP, needs repair, assemblage)
22	Sale includes timber value
23	Sale of properties that had RMV adjudicated in the past 5 years
25	RMV needs updating due to new construction
27	Sales review requested
28	Sales Rev Performed-Not Useable for Ratio
30	Unconfirmed but usable
33	Confirmed and usable sale
35	Assessment clerk question
43	Sale requires additional analysis
50	Special size change code for tracking only
80	Segregation

- vii. Map Number (MAP NO.): The Assessor's map and tax lot number (more than one tax lot may be involved in the sale but not displayed).

- viii. Document Number (DOC NUM.): The calendar year in which the title transfer document was recorded and the recording number of the title transfer document.
- ix. Acres (AC): the total land size expressed as acreage.
- x. RMV Land: the Jan 1 base setup land value plus the on-site development value that is determined during the annual appraisal setup study.
- xi. RMV Imp: the Jan 1 base setup value using the current DOR factor book. The local cost modifier and depreciation schedule conclusions are then applied. These items are determined by the annual setup analysis.
- xii. Total RMV: the sum of the base setup RMV Land and the base setup RMV Imp.
- xiii. Sale Price: the time adjusted sale price of the property as of the date of sale.
- xiv. Sale Date: the month and the year that the property sold.
- xv. Sale Number (#): the sale data is arrayed in ascending order by ratio.
- xvi. Ratio (RT): a comparison of the total Jan 1 appraised value to the adjusted sale price and expressed as a percentage without a decimal point (total sales file RMV/time adjusted sales price = Adjusted Ratio).

Specially Processed Values

Not all assessed values are adjusted in the manner described in this report. Specially assessed values, certain personal property values, and many industrial property values are recalculated or specifically processed annually. The ratio study does indicate how the RMV of farm and forest deferred properties will be adjusted but does not document the specially assessed values.

Annual Setup, Reappraisal, and Recalculation

Establishing annual base values - Every year, the staff devotes approximately four to five months to analyzing and reviewing recent sales. During this time, base land values, OSD values, local cost modifiers, and local market-based depreciation schedules are developed. In addition, class and condition benchmarks are established. These values are referred to as "Base Setup Values" and are entered into the tables for January 1.

Reappraisal - An area (or property type) is selected each year for a physical reappraisal performed by the appraisal staff. During this time, every property within the reappraisal area is visited, inspected, and reviewed for any changes such as; class, condition, topography, access, view, or any other factor that will have an influence on the value. Once the reappraisal is complete, the property is calculated electronically using the base values and factors developed in the Set-up study.

Recalculation - The recalculation process is established from the base setup values and factors that are developed during the setup study and the existing inventory in our system. A physical inspection of the properties is not performed. Since the setup study is performed annually to develop base values, this recalculation method is a more reliable way to determine market trends rather than solely depending on the ratio study conclusions.

Status of the Assessor's Adjustment Program

The Columbia County Assessor and staff will continue to review market information until the actual changes are made to the roll. It is possible that additional data and further analysis will lead to conclusions different from those contained in this report.

The Assessor must make those adjustments that are indicated by reliable market data to produce the most accurate appraisals possible. Any future modification to the adjustment factors in this report will be reported to the Department of Revenue and will be documented in this study.

Total number of arms-length sales

The sale counts below show the number of code 21, 30 and 33 sales that are arm lengths transactions for the 2022 sales collection year. The code 30 and 33 sale counts are considered to have sold the same as the certified roll value and not the Jan 1st base value.

Area	Number of Arm's Length Sales (Code 21, 30, & 33)	Sales used in the Ratio Study (Code 30 and 33)	Number of Confirmed Sales (Code 33)	Percent Confirmed
MA 1	216	205	195	95%
MA 2	153	141	133	94%
MA 3	66	58	54	93%
MA 4	80	60	55	92%
MA 5	86	61	53	87%
MA 6	124	115	103	90%
MA 7 PPMS	66	28	26	93%
Comm/Ind	22	12	6	50%
Apartment	3	3	2	67%
Floating Property	16	7	7	100%
Total:	832	690	634	92%

92% of usable sales used have been confirmed for the current study

*GROUPING
ANALYSIS and
STUDY AREA
DESCRIPTIONS*

Grouping Analysis

When performing an analysis, some study areas or classification groupings may move within the market in a similar manner. When this is observed, they may have been combined into one individual study. In addition, other study areas and/or market groups may have been combined to improve the sale sample in order to arrive at a more reliable conclusion. Study areas and/or market groups were analyzed separately if:

- The data indicated that an individual SA and/or market grouping had sufficient data to arrive at a reliable conclusion, and
- The sales within those areas indicated that it would not be reasonable to combine them with another area and/or classification.

If a study area and/or classification group were combined, then they have been identified in the individual Ratio study.

Study Area descriptions

Maintenance Area 1 – City or St. Helens

00	Residential/Commercial/Industrial	73	Comm. use in Ind. area within Comm. corridor
15	River Front	74	Comm. use in Ind. area outside Comm. corridor

RESIDENTIAL
SALES COMPARISON

Sales Comparison

For the 2023 ratio year, the following illustrates the percent difference between the certified real market value of residential property and the adjusted sales price for the collection year. Prior to 2023, the Jan 1st base value was used to determine the percent difference from the adjusted sales price for each ratio year.

The data depicts arms-length transactions over a span of 5 years. The chart diagrams, and the subsequent information of current market trends, are for market studies and appraisal purposes.

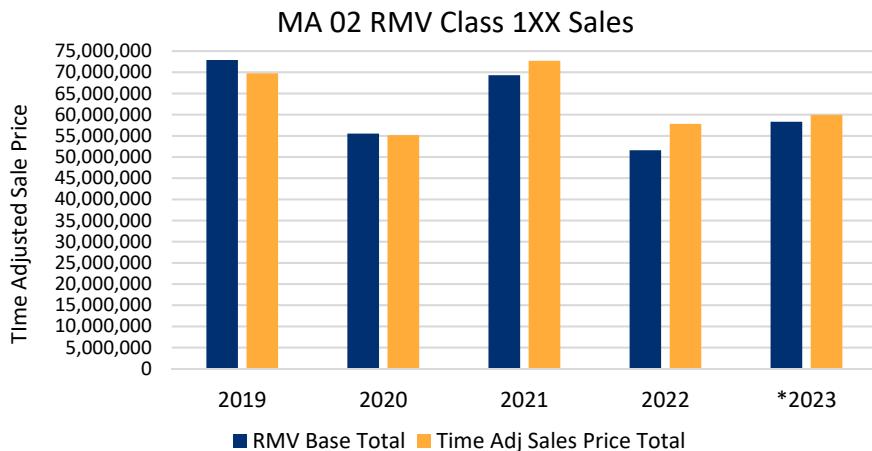

Maintenance Area 1 – St. Helens

Ratio Year	# of Sales	Total RMV	Time Adjusted Sales Price Total	Difference	% difference from RMV to Adj Sales Price
2019	255	72,806,397	74,816,136	2,009,739	2.76%
2020	233	65,665,940	70,398,176	4,732,236	7.21%
2021	282	83,925,620	96,716,338	12,790,718	15.24%
2022	428	142,297,520	165,331,607	23,034,087	16.19%
*2023	205	77,739,860	82,971,497	5,231,637	6.73%

*TIME
ADJUSTMENT
STUDY*

Time Study Method

The Columbia County Assessor's Appraisal staff performs a Recalculation Base Setup study annually to establish new market values beginning Jan 1st of the assessment year. This method has raised questions by the Department of Revenue (DOR) as to which market value should be used as a measurement for determining a time adjustment and trending conclusions for the current ratio study:

- o Should the prior year's certified RMV, an already time adjusted and trended value, be used as a measurement for current market movement and ratio conclusions?
 - o Or, should the *un-adjusted and un-trended* January 1st recalculation base setup value be used?

The method of using base setup values as a measure against the sales data provides better-quality analysis scales and reliable indicators for the current market. However, the Oregon Department of Revenue and the “Assessor’s Ratio Procedures Manual – 2017” specifies that the sales for the current ratio study are to be adjusted using the prior year certified roll values. (See OAR 150-309-0230 (12)(a) and (b); OAR 150-309-0230 (13)). By adhering to the recommendations of the DOR and following Oregon Administrative Rule, many legitimate and credible sales were eliminated from the sales dataset. Following is a list of 135 bona fide sales that were excluded because the certified roll value did not reflect the same as when the property sold during the 2022 sales collection year:

Reason	Sales Excluded
Certified acreage different than when the property sold.	1
Certified RMV as an entered value.	4
Certified RMV as vacant land vs. sold as improved.	6
Certified RMV reflects a partial percent complete on the improvement vs. Jan 1 base reflecting as 100% complete which is how it sold.	19
Certified RMV reflects different condition/inventory than the Jan 1 base and how it sold.	54
Certified RMV reflects value as part of total unit vs. the Jan 1 base reflects a single unit value and sold as a single unit.	1
Jan 1 st base and the consideration on deed reflects a lump sum for multiple accounts but cannot be adequately extracted from certified roll value.	50

Total valid sales not used for the 2022 Time Adjustment Study 135

Number of valid sales available <u>if</u> the Jan 1 Recalculation Base Setup had been permitted:		<u>Actual</u> number of sales applied and allowed by Dept. of Revenue and Oregon Admin. Rule:	
Residential	773	Residential	640
Personal Property MS	28	Personal Property MS	28
Floating Property	7	Float Property	7
Comm/Multi-Family	17	Comm/Multi-Family	15
Total	825	Total	690

A total of 825 arm's length sales were available but only 690 sales were allowed to be used, resulting in 16% of the sales not being used. It goes without saying that the percentage of sales that were eliminated affects the time adjustments and ratio conclusions greatly. Nevertheless, to maintain compliance with State laws and rules, the certified RMV along with a total of 690 sales have been implemented for the time adjustment and trending conclusions for the 2023 Ratio year.

Time Study Groupings

The sales data collected from 01-01-2022 to 12-31-2022 was separated into several Property Class groupings:

1. Property Class 1XX: These are residential properties located within the city limits of each maintenance area.
2. Property Class 4XX, 5XX, and 6XX: Those rural residential properties and those under farm or forest special assessment located outside the city limits within each maintenance area.
3. Property Class 019: This classification is comprised of personal property manufactured structures located throughout the County.
4. Property Class 111: Floating properties, countywide.

Several time adjustment studies were performed using the property class groupings listed above. Upon review, it was determined that too few vacant land sales were found to adequately measure an adjustment for time. Therefore, vacant land will be included with the improved property analysis. In addition, since the Helion software only allows for market groupings by RMV Class, the ratio study classifications will be as follows:

Property Class (Highest and Best Use)	RMV Class (Trending)
Residential City (1XX)	1XX
Rural Residential (4XX, 5XX, 6XX)	4XX
Personal Property MS (019)	019
Floating Property (111)	111

Following the Oregon Department of Revenue and the Assessor's Ratio Procedures Manual 2017, an examination of market movement was conducted using the Ratio Analysis-Direct Calculation method. Adhering to the DOR's guidelines, sales for the current ratio study were time-adjusted against the prior year certified values ("roll value"). An analysis was performed and an annual rate of change from the date of sale to the Jan 1st assessment date roll value was calculated.

Time Adjustment conclusions

The analysis indicates the following annual time adjustments:

Classification	Description	Time Study Conclusion
Property Class 1XX (RMV Class 1XX)	Residential property located in the City limits, vacant land and improved.	1%
Property Class 4XX, 5XX, & 6XX (RMV Class 4XX)	Vacant land and improved rural residential property located outside the city limits.	3%
Property Class 019 (RMV Class 019)	Personal property manufactured structures, countywide.	3%
Property Class 111 (RMV Class 111)	Floating Homes, Combinations and Boat Houses located throughout the county.	No adjustment due to lack of sales available.
Property Class 2XX and 3XX (RMV Class 2XX and 3XX)	Commercial and Industrial properties; vacant land and improved countywide.	No Adjustment applied (too few sales).

Time Adjustment conclusions continued

Applying the time adjustment conclusion in the Helion ORCATS Ratio Study program:

1. The annual time adjustment conclusion is entered into the Time Trend Adjustment field. Once this is entered and applied, the central tendencies are adjusted and are then displayed in the “Sales (Ratio)” column.
2. The best indicator of value (central tendency) is selected from the Sales (Ratio) column and then entered into the “Selected Ratio from Sales” field. Once applied, the trend factors are calculated on a line item basis.

Historical Time Adjustment conclusions on an Annual Basis

Mid-Point method:

<u>Year</u>	<u>RMV 1XX</u>	<u>RMV 4XX</u>	<u>RMV 019</u>
2019	103%	104%	-

Direct Calculation method using the Recalculation Base Setup RMV:

<u>Year</u>	<u>RMV 1XX</u>	<u>RMV 4XX</u>	<u>RMV 019</u>
2020	11%	9%	4.44%
2021	9%	18%	20%

Direct Calculation method using the prior year Certified RMV:

<u>Year</u>	<u>RMV 1XX</u>	<u>RMV 4XX</u>	<u>RMV 019</u>
2022	16%	23%	72%*
2023	1%	3%	3%

Time Study for RMV Class 4XX

Y axis intersect from beginning of trend line to end of trend line:

01/01/2022 101%

01/01/2023 98%

Number of days in the year: 365

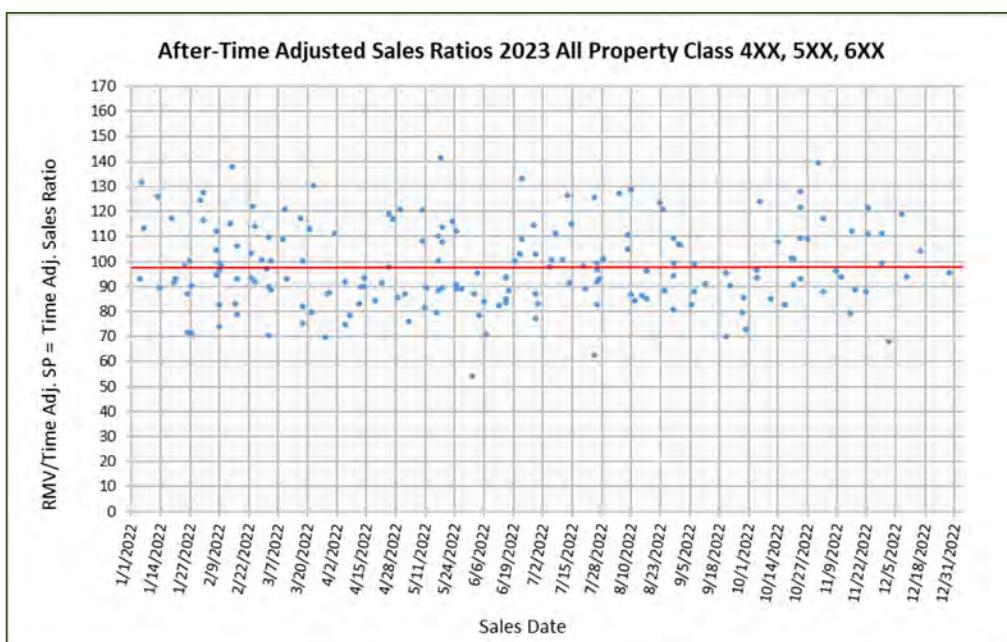

Amount of change: 3%

Annual change factor: 97%

Annual adjustment factor: 103%

Overall Annual Adjustment: 3%

Intermediate adj factor: 0.0085%

Time Study for RMV Class 019

Y axis intersect from beginning of trend line to end of trend line:

01/01/2022 96%

01/01/2023 93%

Number of days in the year: 365

Amount of change: 3%

Annual change factor: 97%

Annual adjustment factor: 103%

Overall Annual Adjustment: 3%

Intermediate adj factor: 0.0085%

*SUPPLEMENTAL
NOTES*

Reappraisal

At this time, residential properties located in the City of Scappoose are undergoing a reappraisal. All sales used for the ratio study analysis in this area have been re-appraised.

Recalculation Setups

For the 2023 year, a county wide recalculation setup was not performed. Instead, appraisal staff focused on the valuation of personal property manufactured structures located in MA 07. Adjustment schedules were developed for the following highly-sought after manufactured home parks: Crestwood Village (SA 27), Columbia City Estates (SA 28), and Springlake Park (SA 30). These parks consist of better-quality homes and have amenities such as lakes, gated communities, proximity to services, home owners' associations, and community living.

The decision has been made to perform recalculation setups on even years. This will leave the odd numbered years for appraisal staff to focus on property classifications which require a more in-depth analysis and are indicating areas of concern.

Explanation

RMV Class 100, SA 00

Unimproved land, City of St. Helens

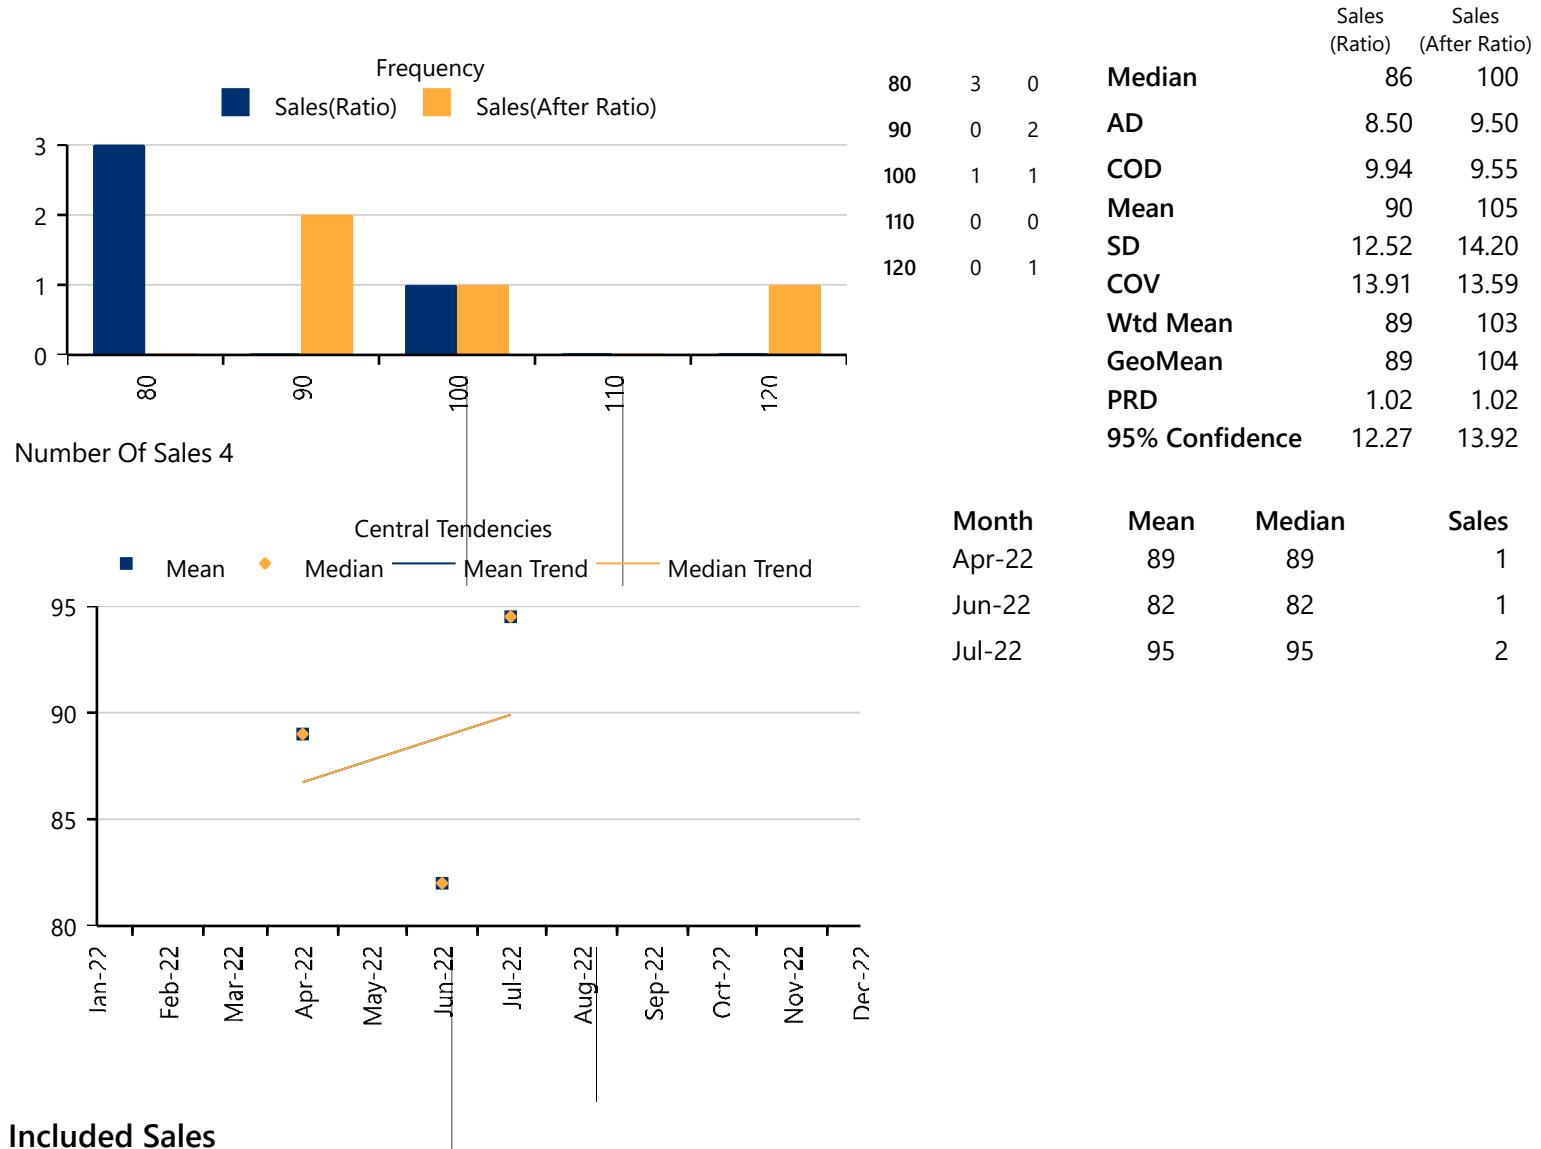

There were 4 sales available for this study of vacant land in the City of St. Helens which represents 2.25% of the total population of accounts. The time adjustment of 1% was applied to the dataset and the Median of 86 was selected and applied. This resulted in a Land Adjustment Factor of 116.

Adjustment Calculation Summary

RECALCULATED

Sample - Number of Sales	178			
Population - Number of Accounts	4053			
Sales as a percentage of the Population	4.39%			
<i>Prior Year Population Values</i>				
Land RMV	353,877,630	26.77%	410,498,051	25.22%
OSD RMV	135,819,260	10.28%	135,819,260	8.34%
Improvement RMV	826,870,834	62.56%	1,074,932,084	66.03%
Farm Improvement RMV	5,152,510	0.39%	6,698,263	0.41%
<i>Selected Ratio From Sales</i>	81			
Time Trend Adjustment	1			
<i>Before Ratio</i>	81			
<i>Overall Adjustment Factor</i>	123			
Land Adjustment Factor	116			
OSD Adjustment Factor	100			
Improvement Adjustment Factor	130			
Farm Improvement Factor	130			
<i>After Ratio</i>	100			

Explanation

RMV Class 101: SA 00

Nonhomogeneous Improved property, City of St. Helens

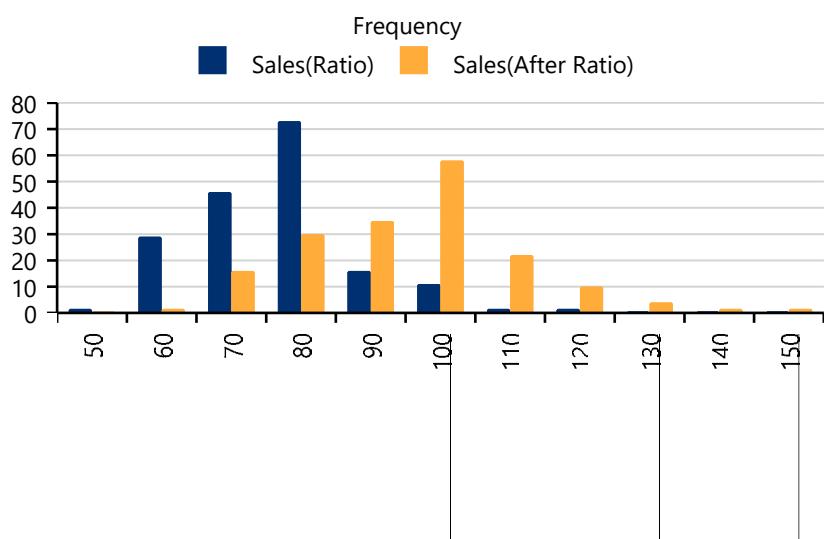

The time adjustment of 1% was applied to this grouping of improved residential properties located in the City of St. Helens. Once applied, the Mean (81) was selected and applied as the best indicator which then returned an Overall Adjustment Factor of 123%.

Nonhomogeneous Improved land - Town house/Row house, City of St. Helens

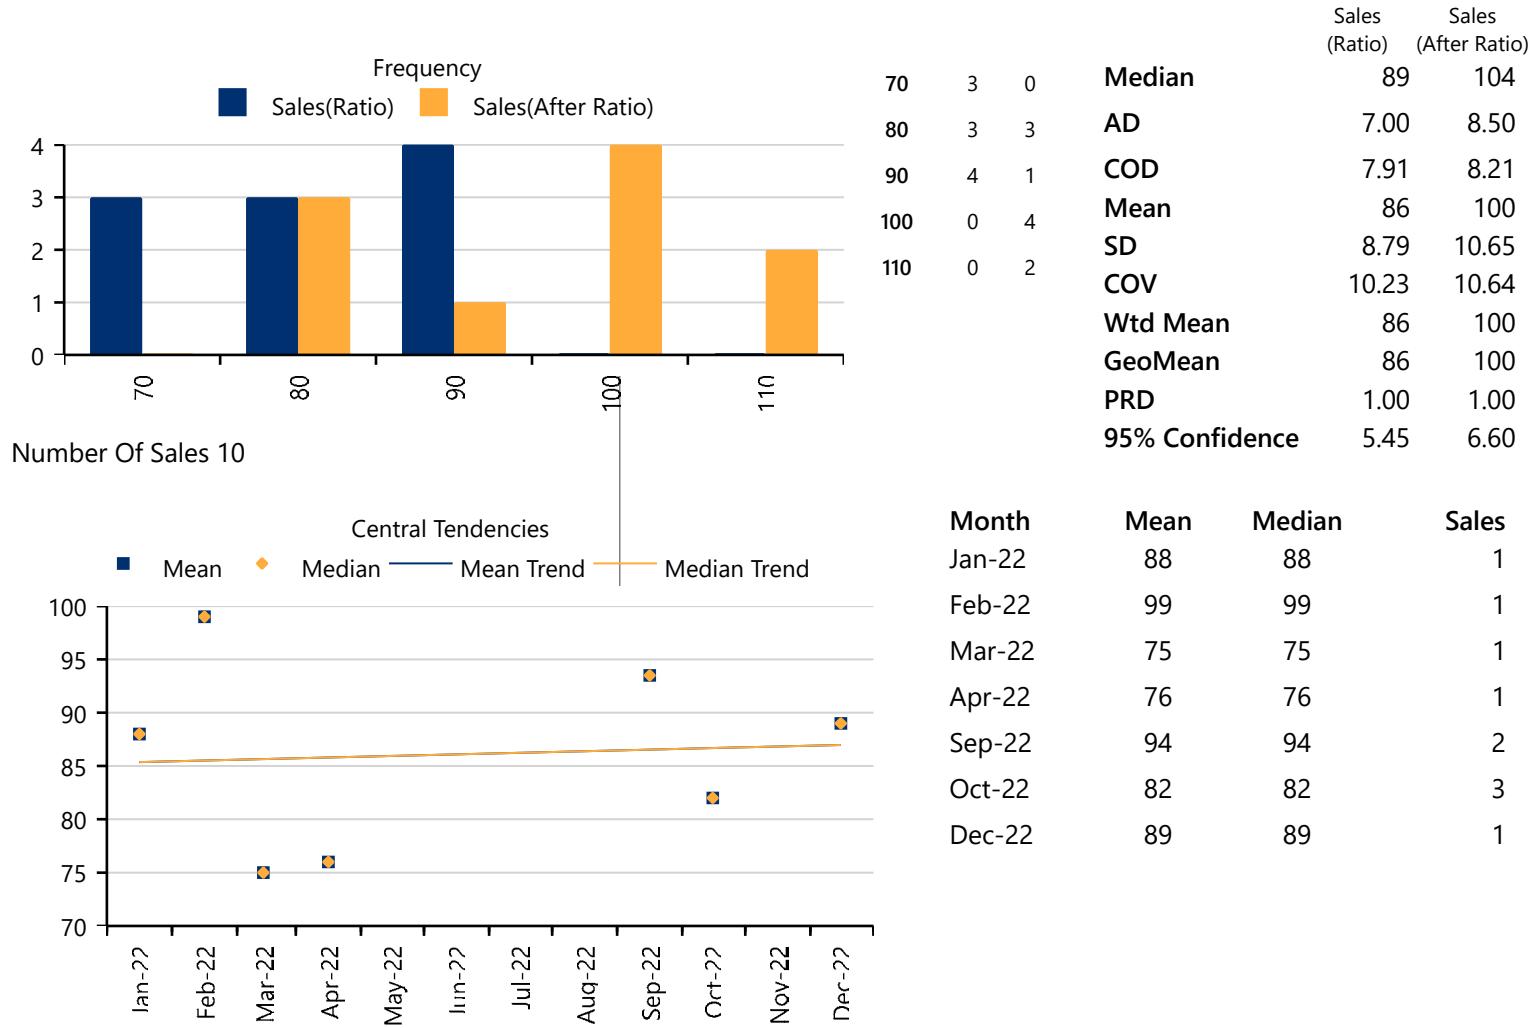

This grouping of Town house and Row house properties has 10 sales available for analysis. After adjusting for time, the Mean of 86 was selected. This central tendency is further supported by the Weighted Mean (86) and the Geometric Mean (86). Once applied, the resulting adjustment is an Overall Adjustment Factor of 116.

Farm Improvement Factor	100
<i>After Ratio</i>	100

Explanation

RMV Class 100: SA 00

Undeveloped land, City of Scappoose

For this analysis of 76 accounts of vacant land in the City of Scappoose, no arm's length transactions were found. Not having an adequate representation of the current market for a ready to develop base city lot, it was deemed appropriate to apply the Overall Adjustment Factor conclusion of 116 from the improved property study in the same area (MA 02 SA 00 RMV 101).

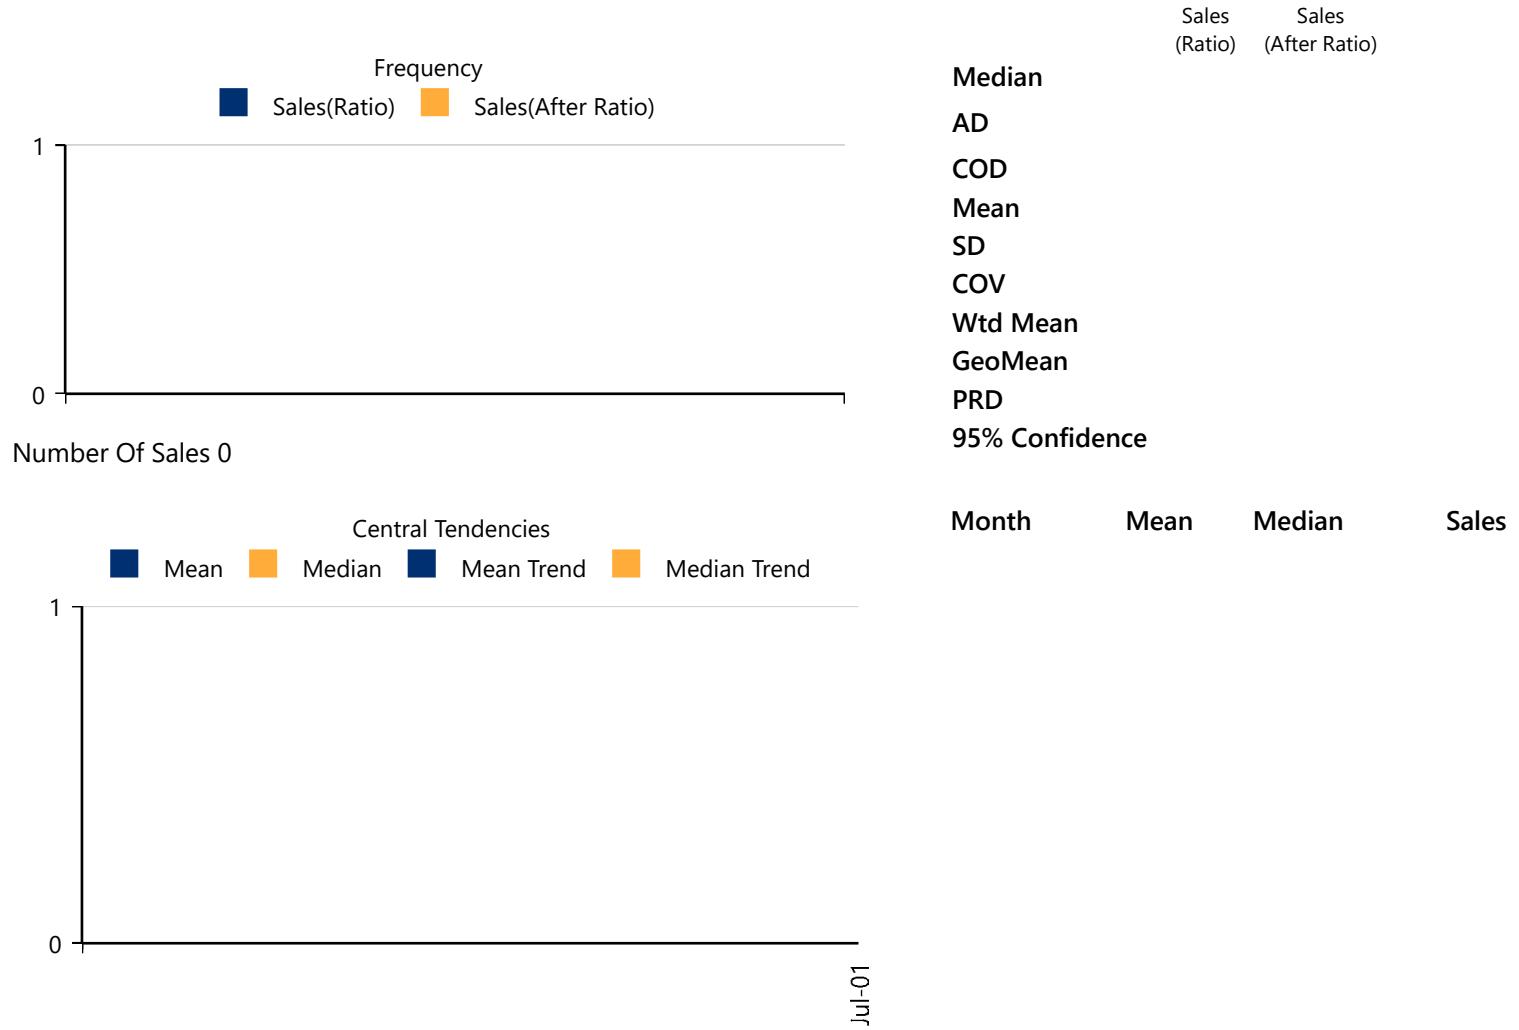

Note: At the time this Study is being prepared the properties in the City of Scappoose (MA 02) are in the process of a re-appraisal. All the sales referenced in this portion of the study have been re-appraised.

<i>After Ratio</i>	100

Explanation

RMV Class 101: SA 00

Nonhomogeneous Improved property of Single-Family Dwelling, City of Scappoose.

This grouping of sales contains a sampling of ratios without any extreme highs or lows. Therefore, the time adjustment conclusion of 1% was applied to the array. The resulting Mean and Weighted Mean returned ratios of 86 and are supported by Median and Geometric Mean (86). After applying the Mean to the array, the Overall Adjustment indicator is 116.

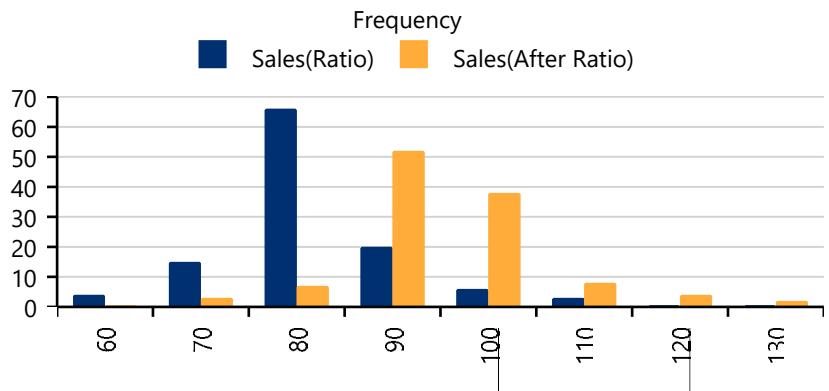

Note: At the time this Study is being prepared the properties in the City of Scappoose (MA 02) are in the process of a re-appraisal. All the sales referenced in this portion of the study have been re-appraised.

Improved property– Condominium, City of Scappoose and Rural Scappoose

A single sale was found for this grouping of condominium properties and has been deemed insufficient for this analysis. Therefore, the Selected Ratio of 86 from the improved properties study (RMV 101 MA 02 SA 00) has been applied here.

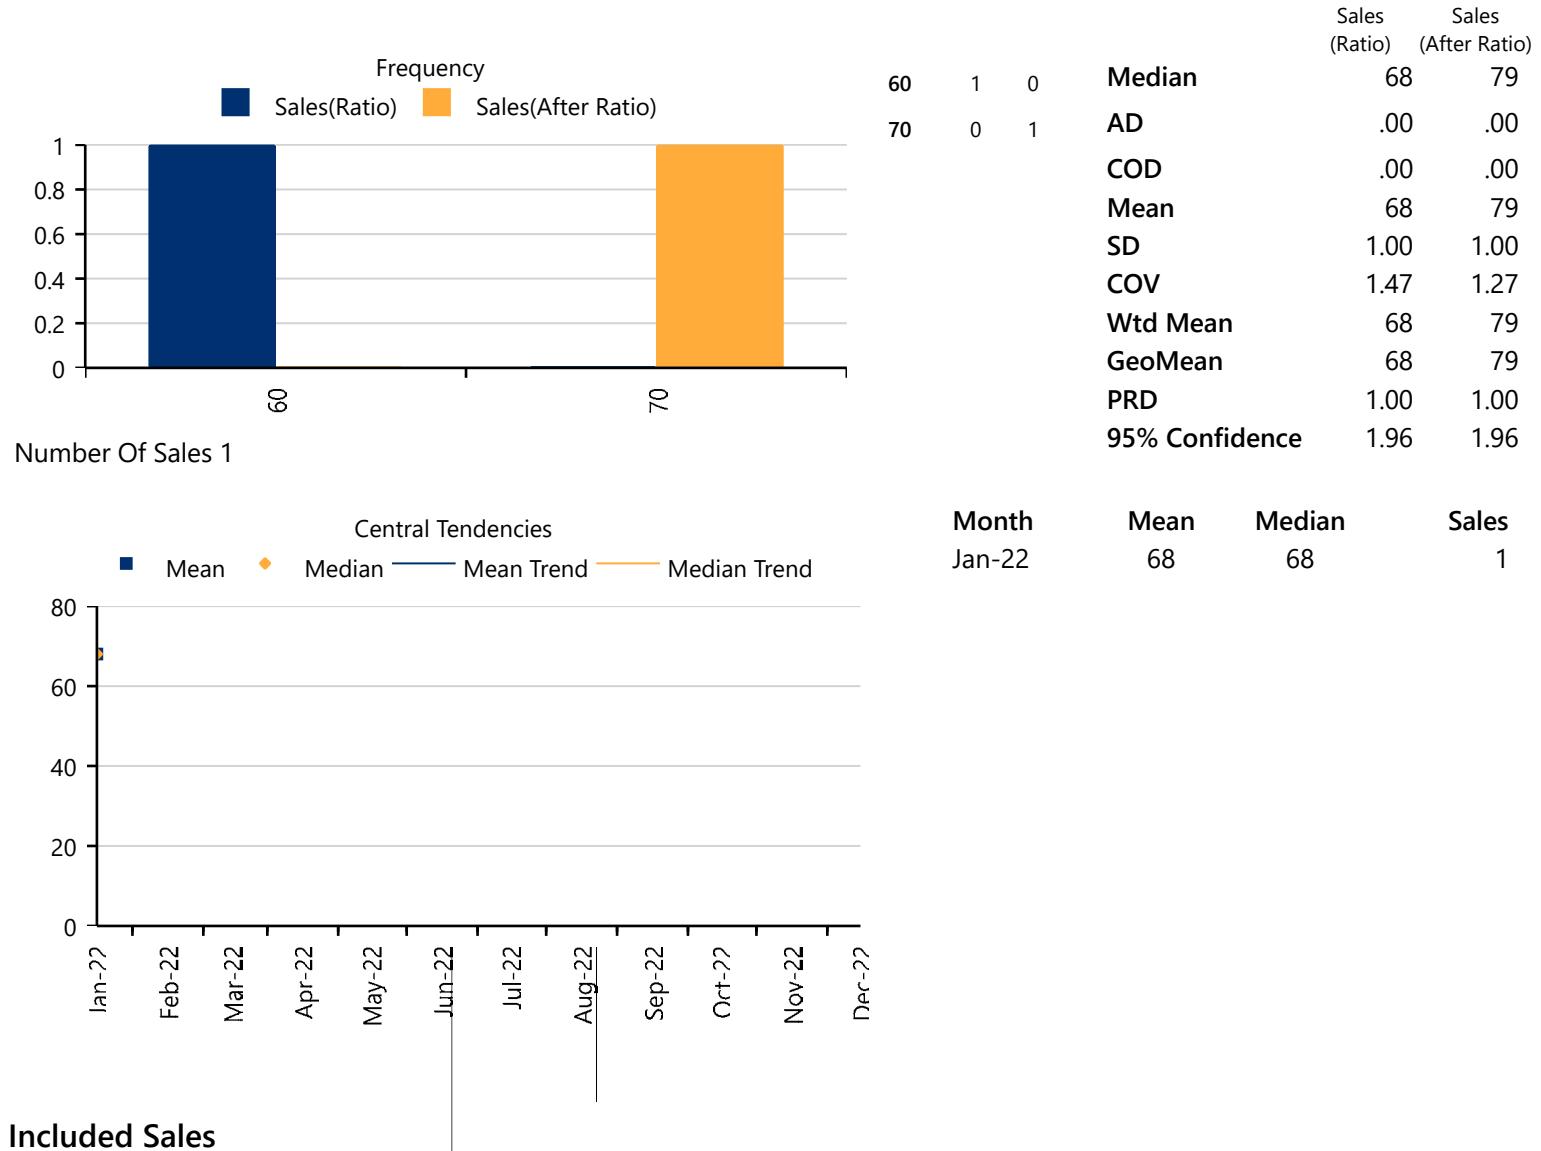

Note: At the time this Study is being prepared the properties in the City of Scappoose (MA 02) are in the process of a re-appraisal. All the sales referenced in this portion of the study have been re-appraised.

Explanation

RMV Class 109: SA 00

Improved property - Manufactured Structure, City of Scappoose

For this analysis of manufactured structures on real property located in the City of St. Helens, two sales were available which comprise 3.13% of the population. After adjusting for movement over time (1%), the Mean of 79 was selected and applied. Once applied, the Overall Adjustment Factor of 127 was concluded.

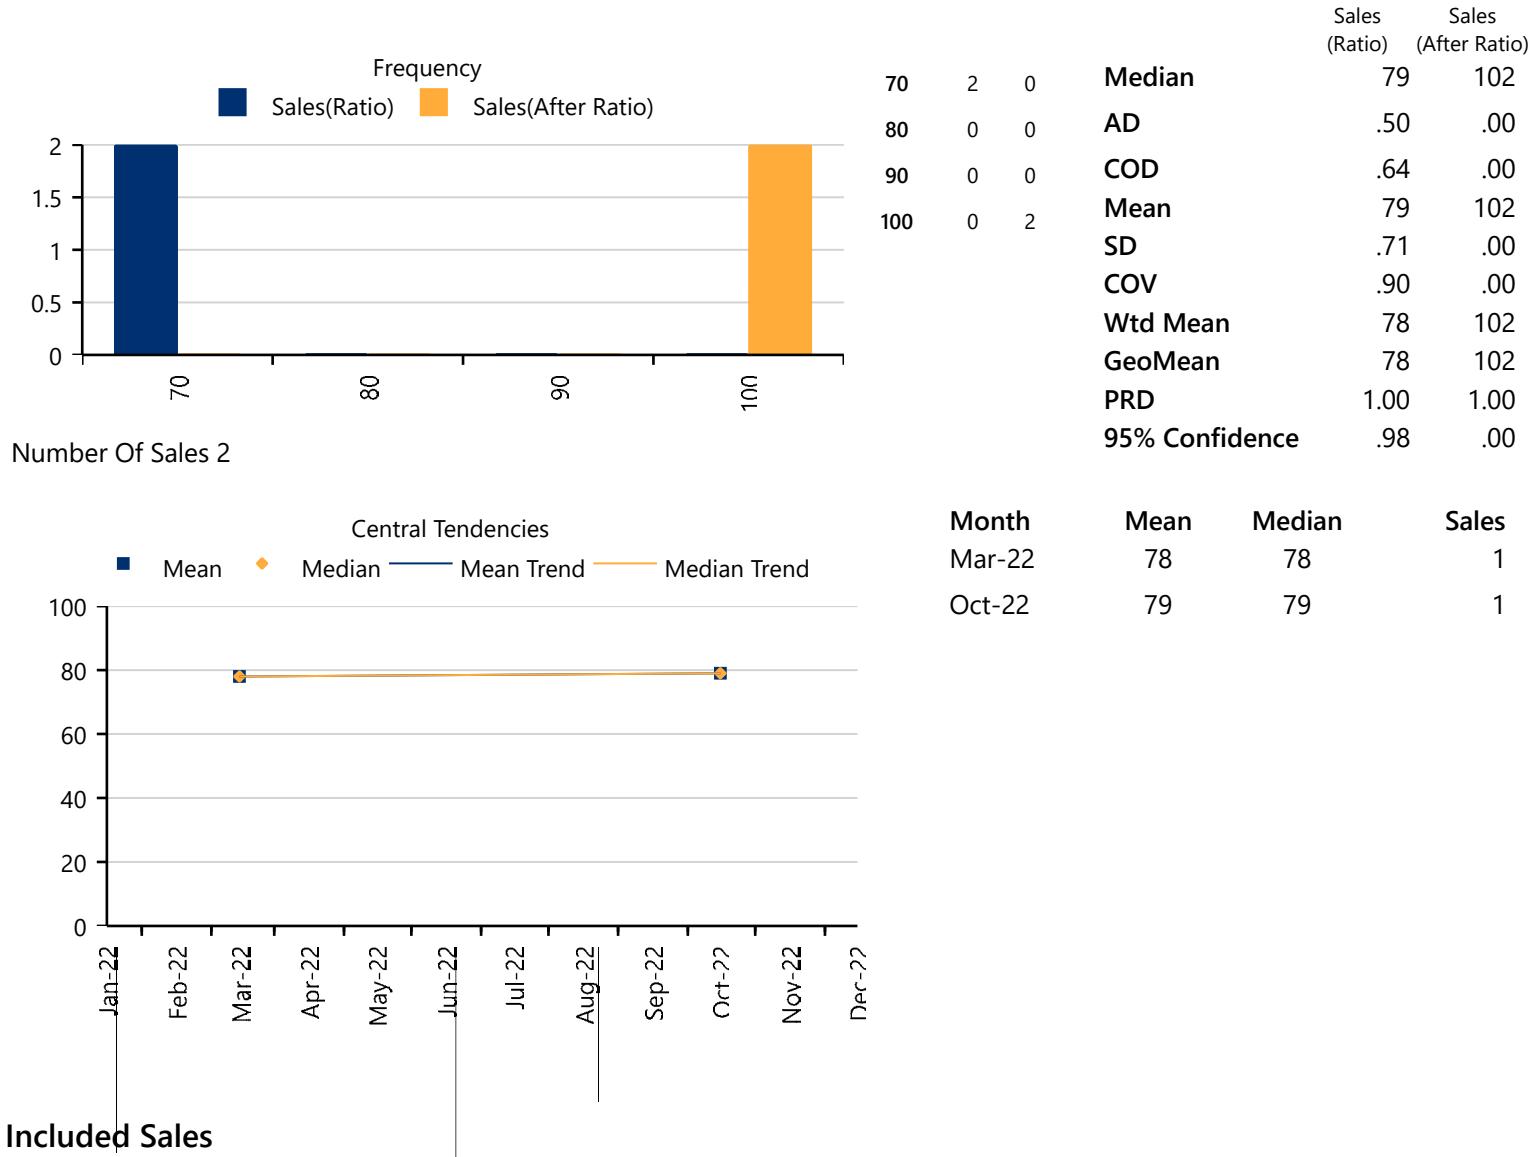

Note: At the time this Study is being prepared the properties in the City of Scappoose (MA 02) are in the process of a re-appraisal. All the sales referenced in this portion of the study have been re-appraised.

Explanation

RMV Class 101: SA 33

Town house/Row house/Common wall, City of Scappoose

This study consists of town houses, row houses and/or those dwellings that share a common wall. There are 7 sales available for this analysis and have been deemed good indicators of how the market is moving within this property classification. After the time adjustment was applied to the array, the Mean, Weighted Mean, Geometric Mean returned the same ratio indicator (95). The Mean was applied and the trend factors were adjusted accordingly.

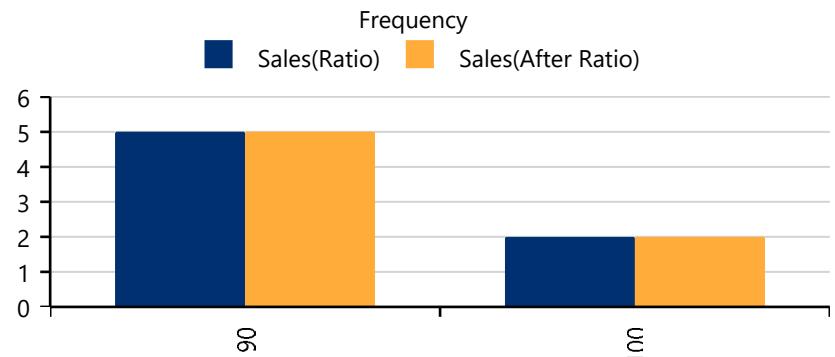

Note: At the time this Study is being prepared the properties in the City of Scappoose (MA 02) are in the process of a re-appraisal. All the sales referenced in this portion of the study have been re-appraised.

Improved land – Sauvies Island

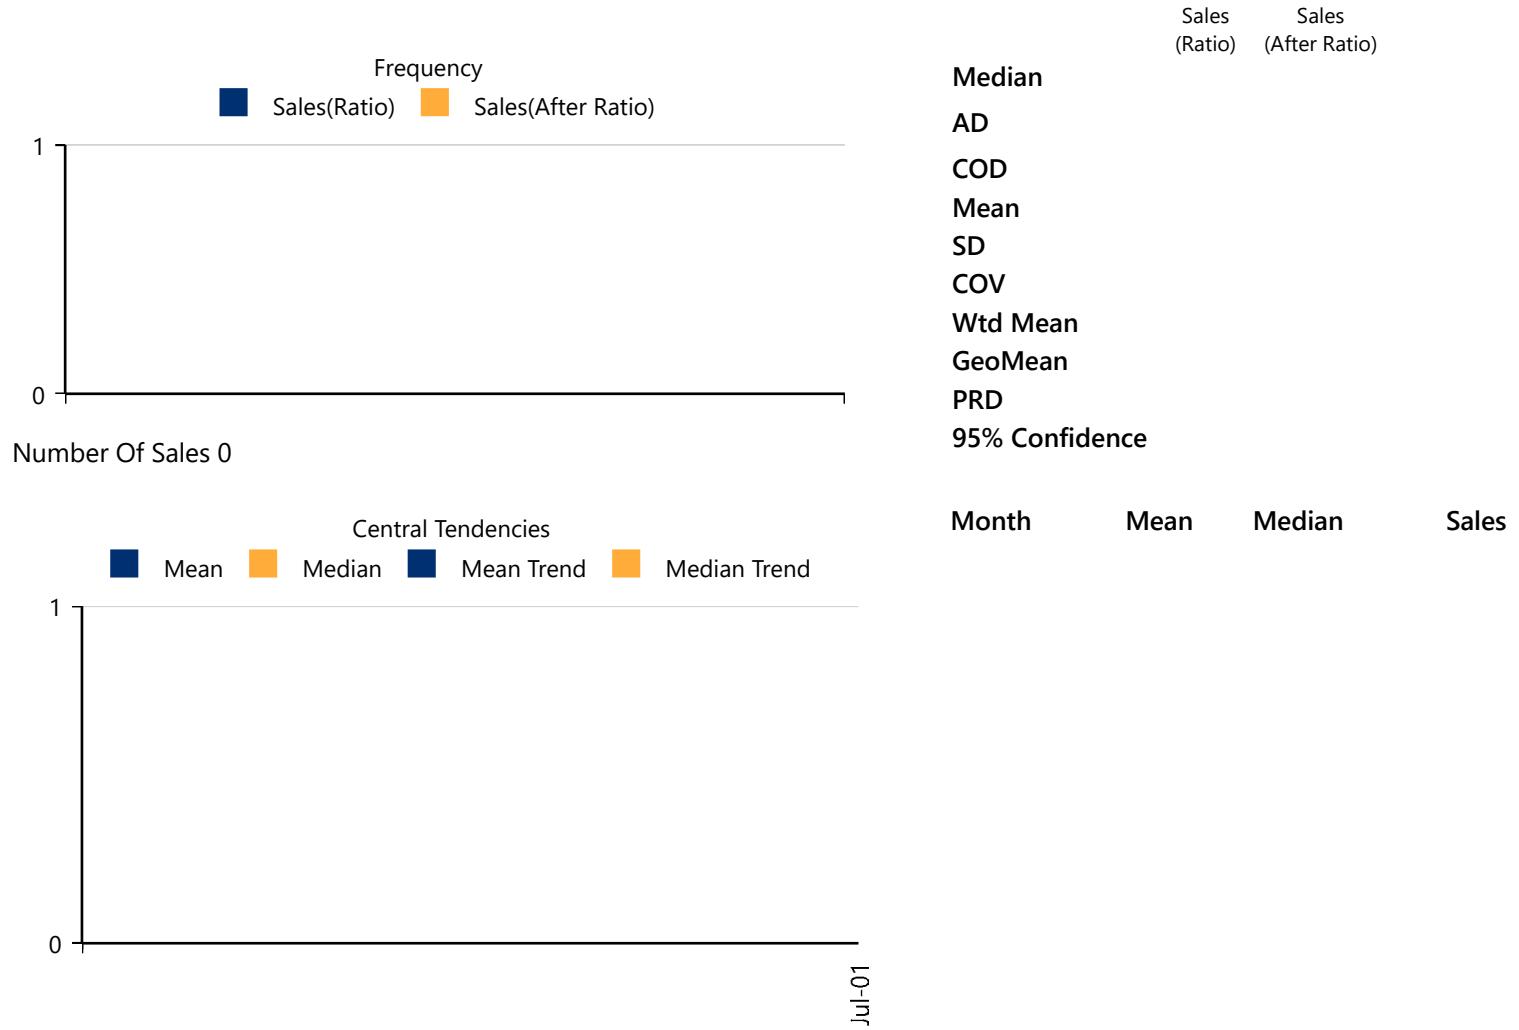

The Northern area of Sauvies Island is comprised of small pockets of properties that have low and wet topography. The demand for property in this area is extremely low with very few arms-length transactions ever occurring. With having no sales available for this analysis, it was decided to use the Selected Ratio of 91 from the conclusion of the RMV 401, SA 21 analysis located in the same maintenance area.

Improved land – Columbia Acres & Hillcrest, Rural Scappoose

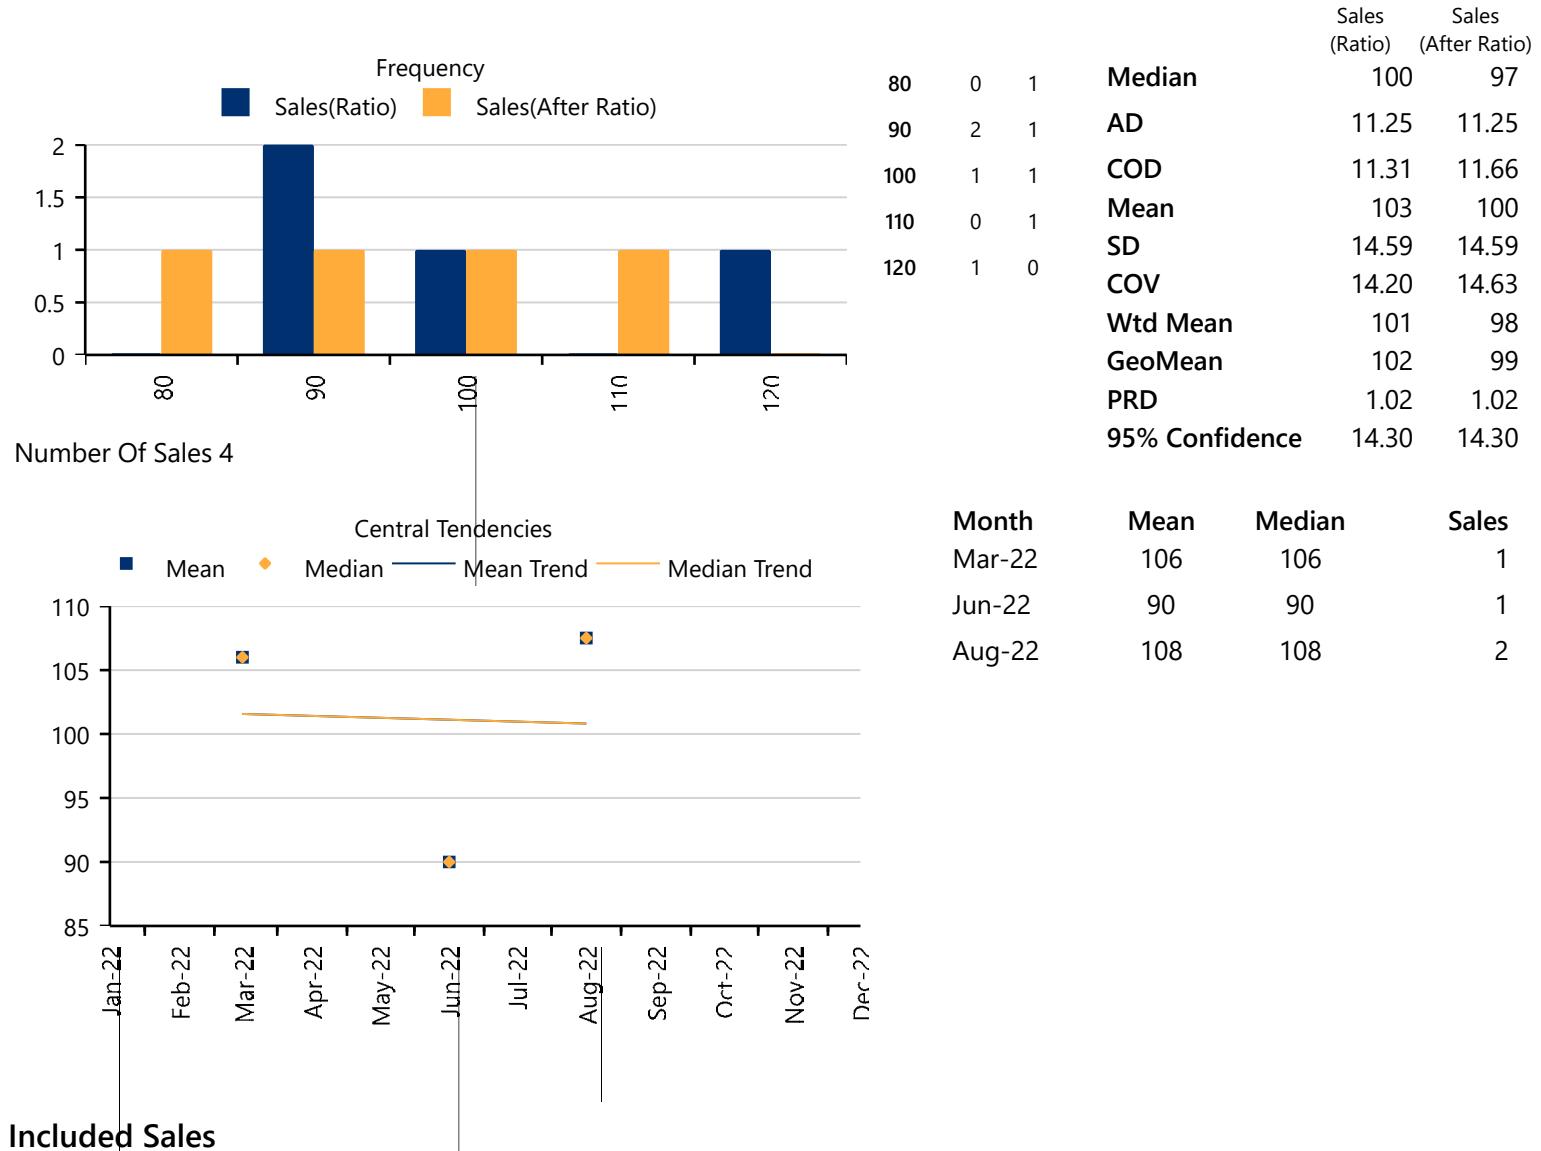

The properties in this study area are in a highly desirable location since they are located south of the City of Scappoose, have easy access to Highway 30 and are in close proximity to Portland. The rural setting of mountain and territorial views with upscale homes makes this area unique. There are four sales available which are deemed valid market transactions for this classification of property. After review and applying the time conclusion of 3%, it was decided to apply the Mean of 103. This indicator resulted in an Overall Adjustment Factor of 97.

Explanation

RMV Class 800 & RMV 890: SA 64

Undeveloped land - Columbia Acres & Hillcrest, Rural Scappoose

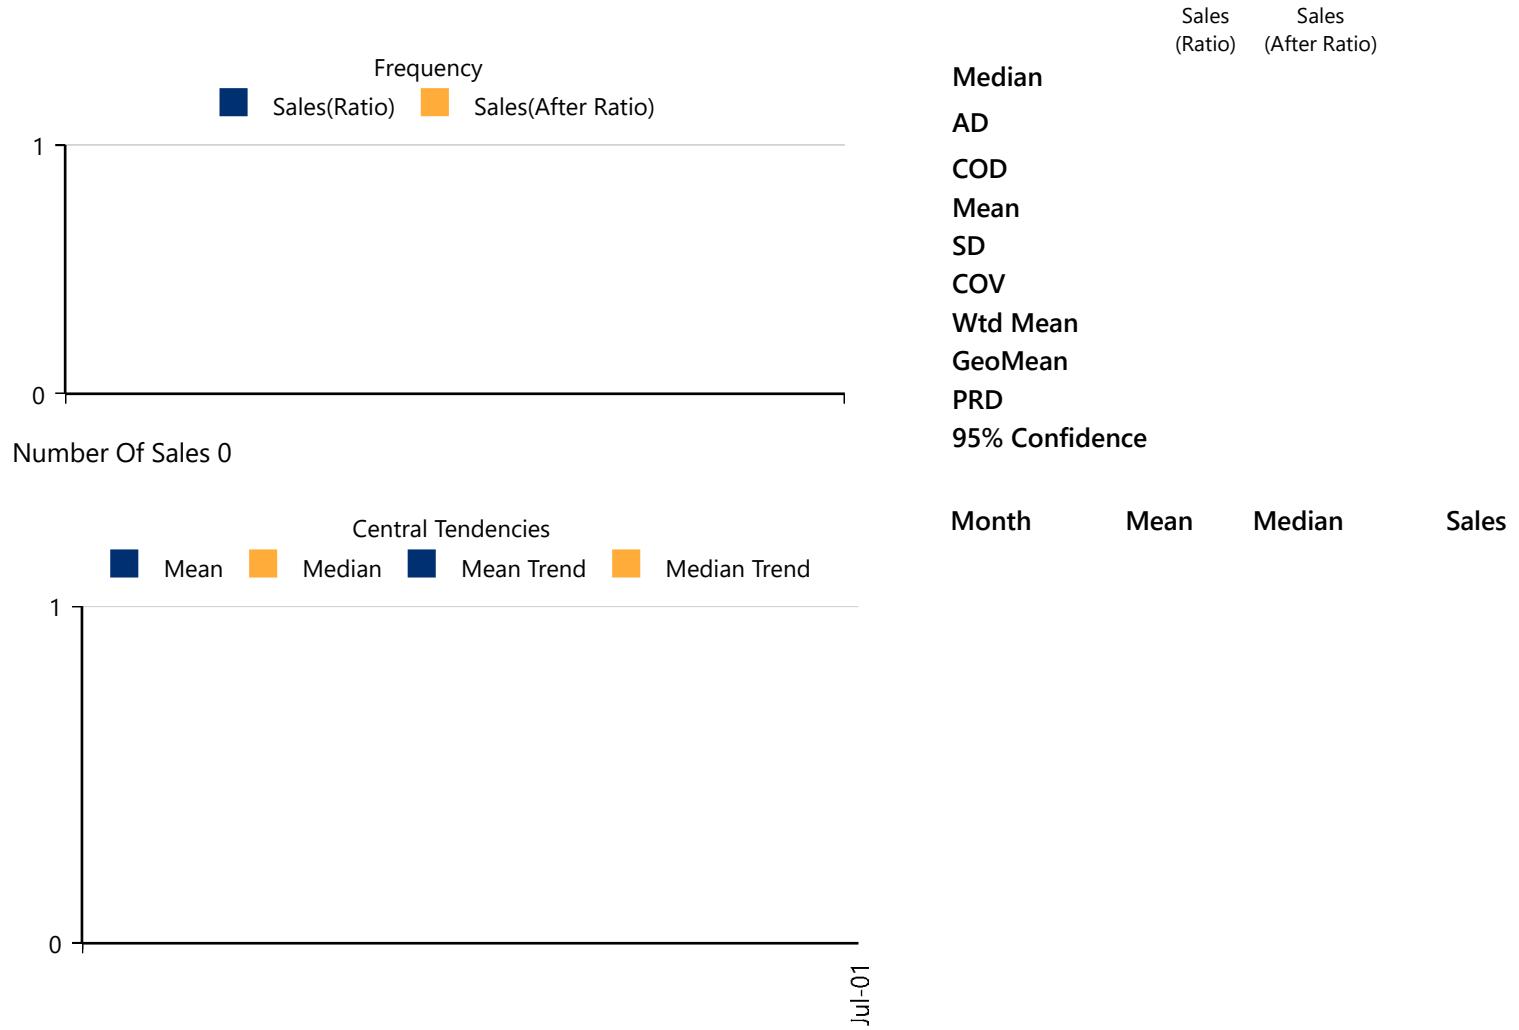

This classification of properties are those which can only be developed if they are combined or irrevocably bound. They are very small vacant land lots with minimal value. Because of the unique nature of these groupings and having no sales data available, it is recommended to make no adjustment at this time.

Explanation

RMV Class 100: SA 00

Undeveloped land – located in the City of Vernonia

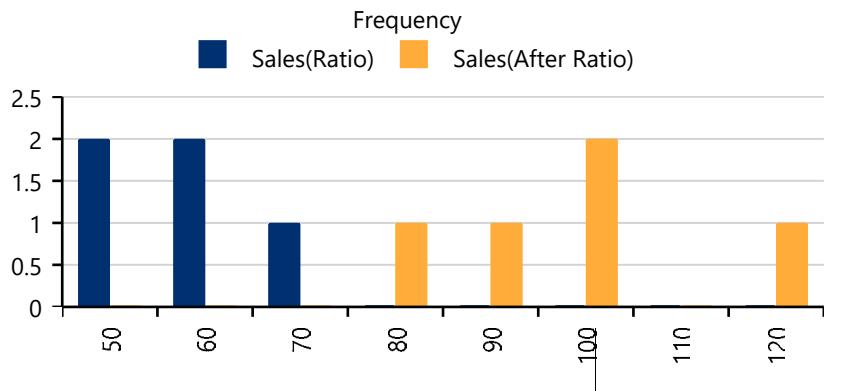

There are 5 sales available for this study of vacant land in the City of Vernonia which is an adequate array and deemed a good sampling of how the market is moving within this property classification. After adjusting for market movement by applying the time study conclusion of 1% to the array the Median (61) was selected which returned an Overall Adjustment Factor of 164.

Explanation

RMV Class 101: SA 00

Nonhomogeneous Improved land - located in the City of Vernonia

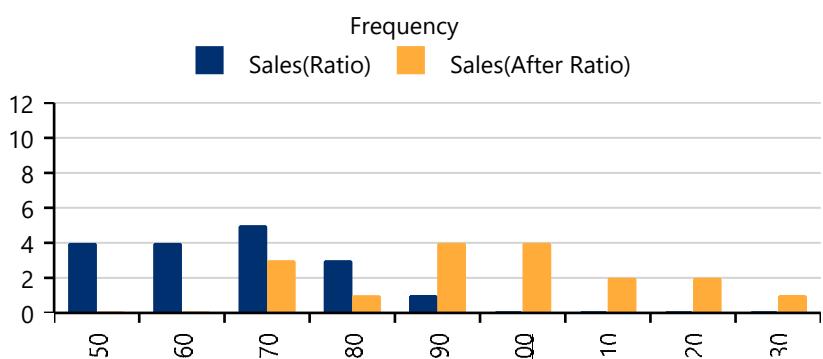

Being located close to Washington County, this classification of properties has been highly sought after this past year. After adjusting for market change (time), the Mean of 69 was returned. This central tendency is supported by the Median (70), Weighted Mean (70), and the Geometric Mean (68). After applying the Mean to the dataset, the Overall Adjustment Factor of 145 was established and implemented.

Improved Land – Manufactured Structure, City of Vernonia

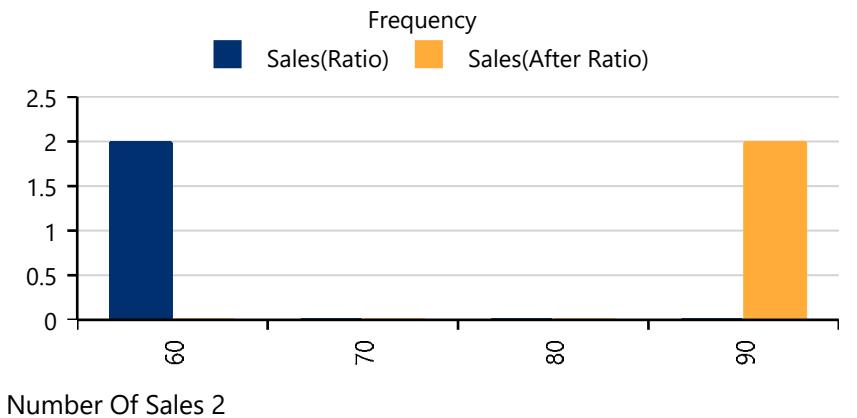

This grouping of improved manufactured structure sales located in the City of Vernonia returned 2 sales for analysis. Although the dataset is small, the sales were deemed adequate and sufficient for this examination. After some review of the dataset and after applying the time adjustment of 1%, the Median of 66 was selected as the most appropriate indicator. This resulted in an Overall Adjustment Factor of 152.

Explanation

RMV Class 101: SA 03

Nonhomogeneous Improved land, City of Vernonia Floodway

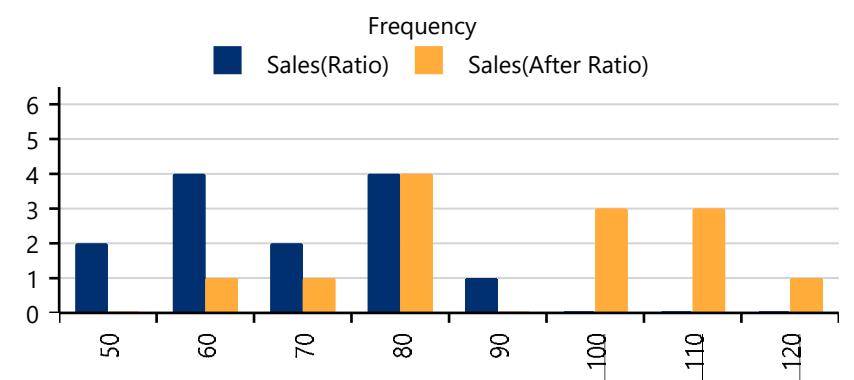

A total of 13 sales were found for this study of improved properties located within the designated FEMA Floodway in the City of Vernonia. After applying the time adjustment of 1% to the dataset, the Median (78) was applied. The Selected Ratio of 128 was returned which then resulted in a land adjustment factor of 128 and an improvement/farm adjustment factor of 134.

Improved land – Rural Vernonia

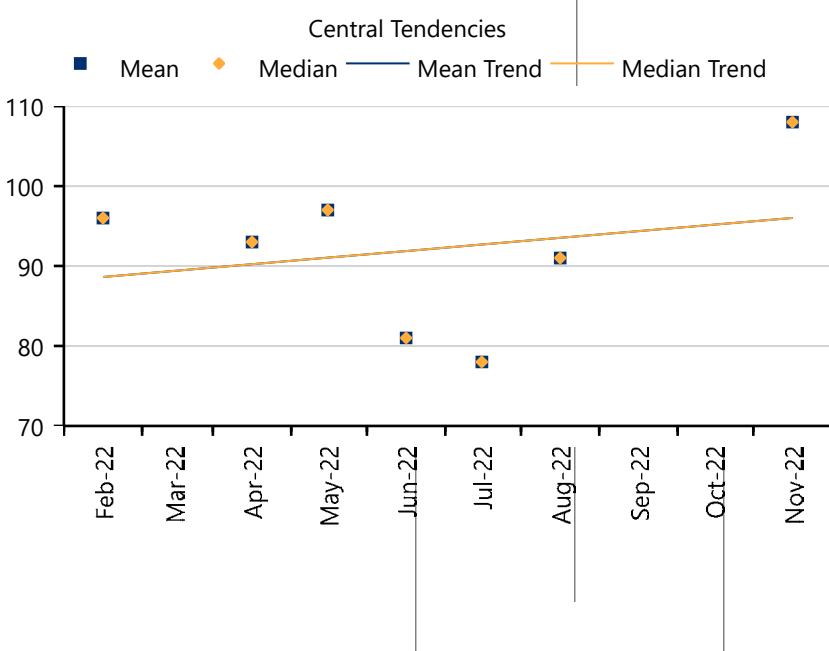

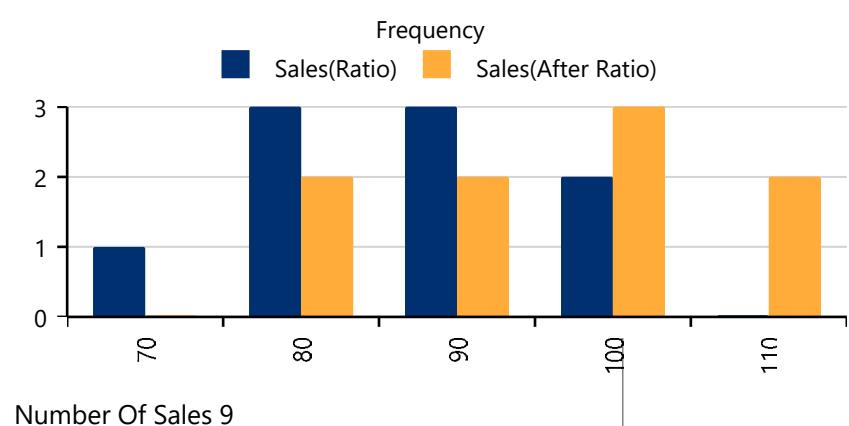

There are 9 sales in this array of improved residential properties in rural Vernonia. The annual time adjustment conclusion (3%) was applied to the sales array and the Selected Ratio of 92 (Mean) was applied. As a clear indication of the market, the Mean, Weighted Mean, and Geometric Mean returned a ratio of 92. This indicator is further supported by the Median (93). Once the Mean was applied to the dataset, the Overall Adjustment Factor of 109 was returned.

Explanation

RMV Class 409: SA 21

Improved land – Manufactured Structure in Rural Vernonia

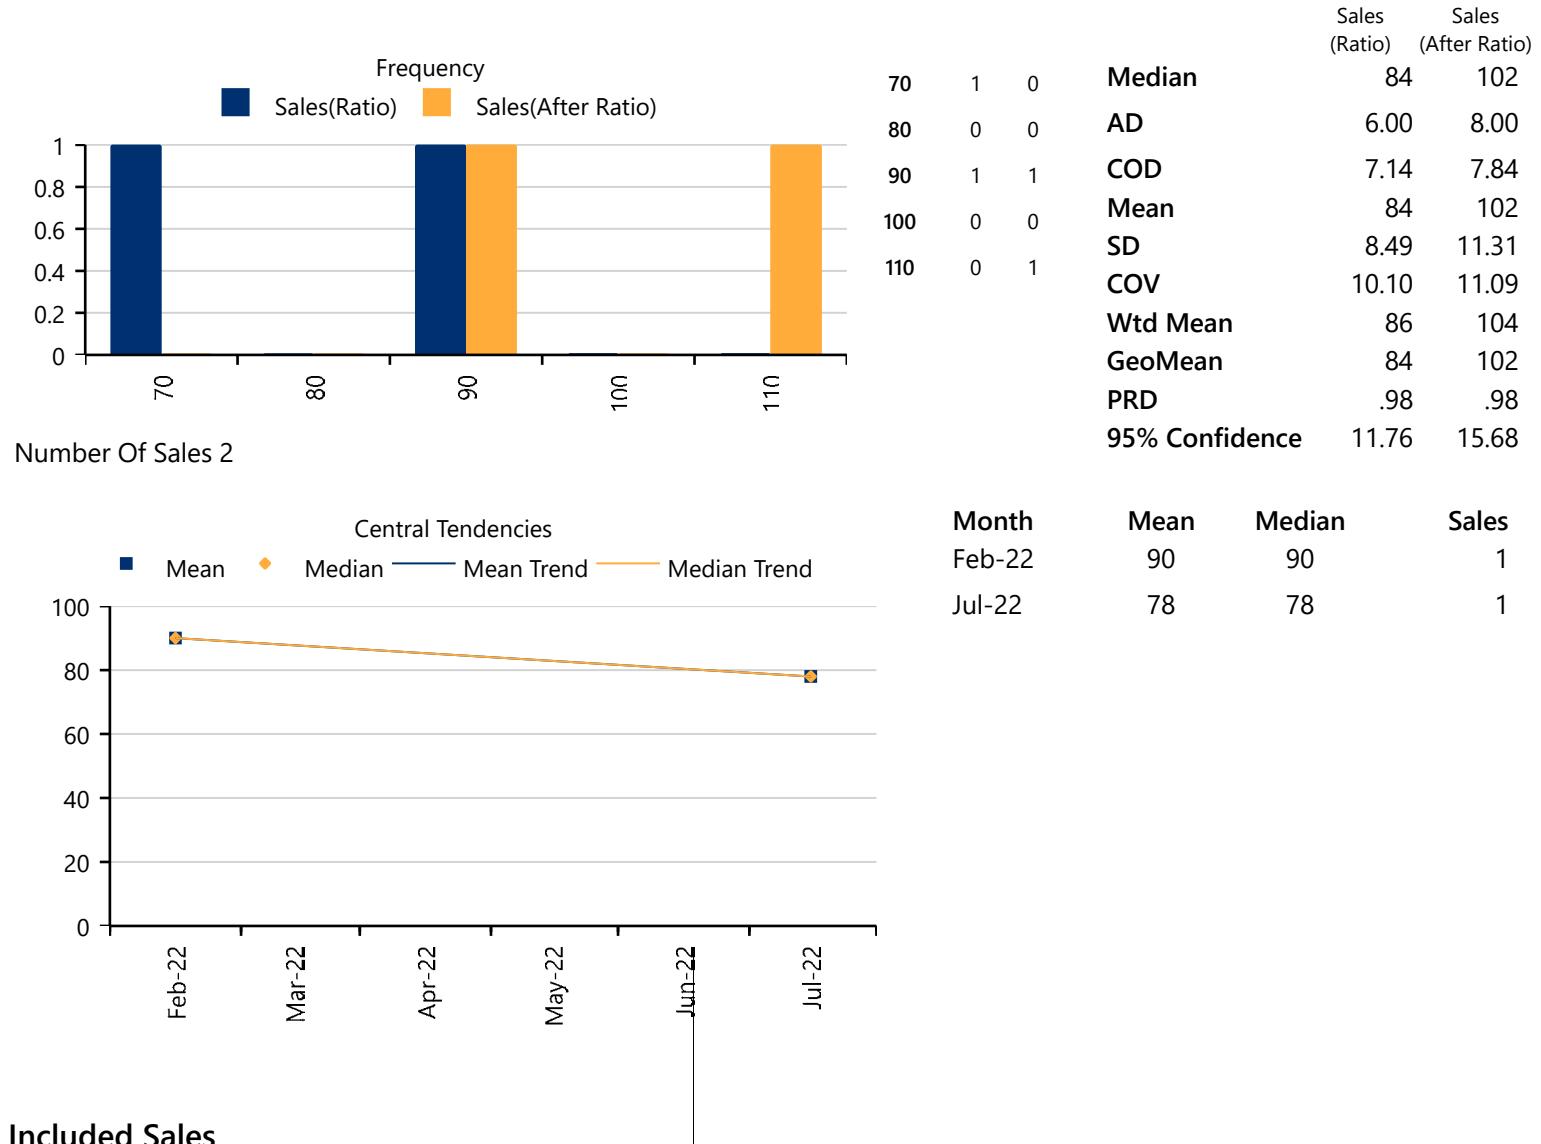

This grouping of properties consists of those improved with manufactured structures located in the rural areas of Vernonia (SA 21). The dataset returned 2 valid sales for study which were adjusted for market movement using the conclusion from the time adjustment study (3%). The Mean, Median, and Geometric Mean returned a ratio of 84). The Mean was selected and applied to the data set resulting in an Overall Adjustment of 119.

Explanation

RMV Class 401: SA 31

Improved land – Value Zone 1 (31) in Rural Vernonia

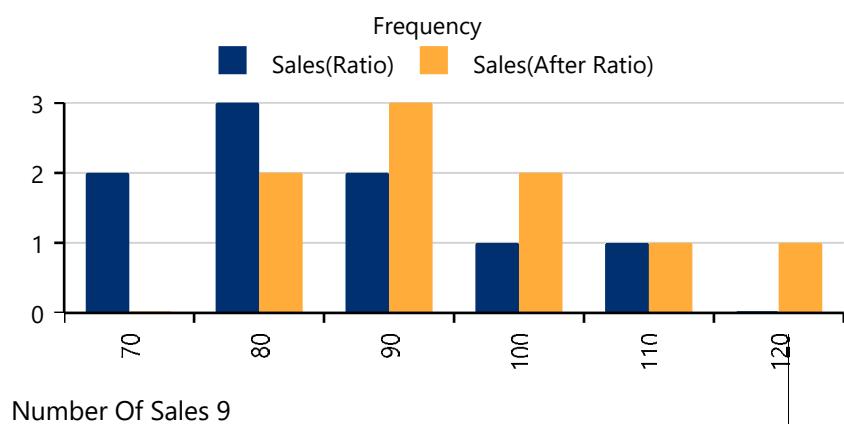

Considered good indicators for this property classification, 9 sales were found for this analysis of improved property in rural Vernonia. The sales were reviewed and the time adjustment conclusion of 3% was applied to the dataset. The Selected Ratio of 92 (Mean) was applied which returned a ratio of 109 as the Overall Adjustment Factor.

Explanation

RMV Class 100: SA 00

Undeveloped land, City of Rainier

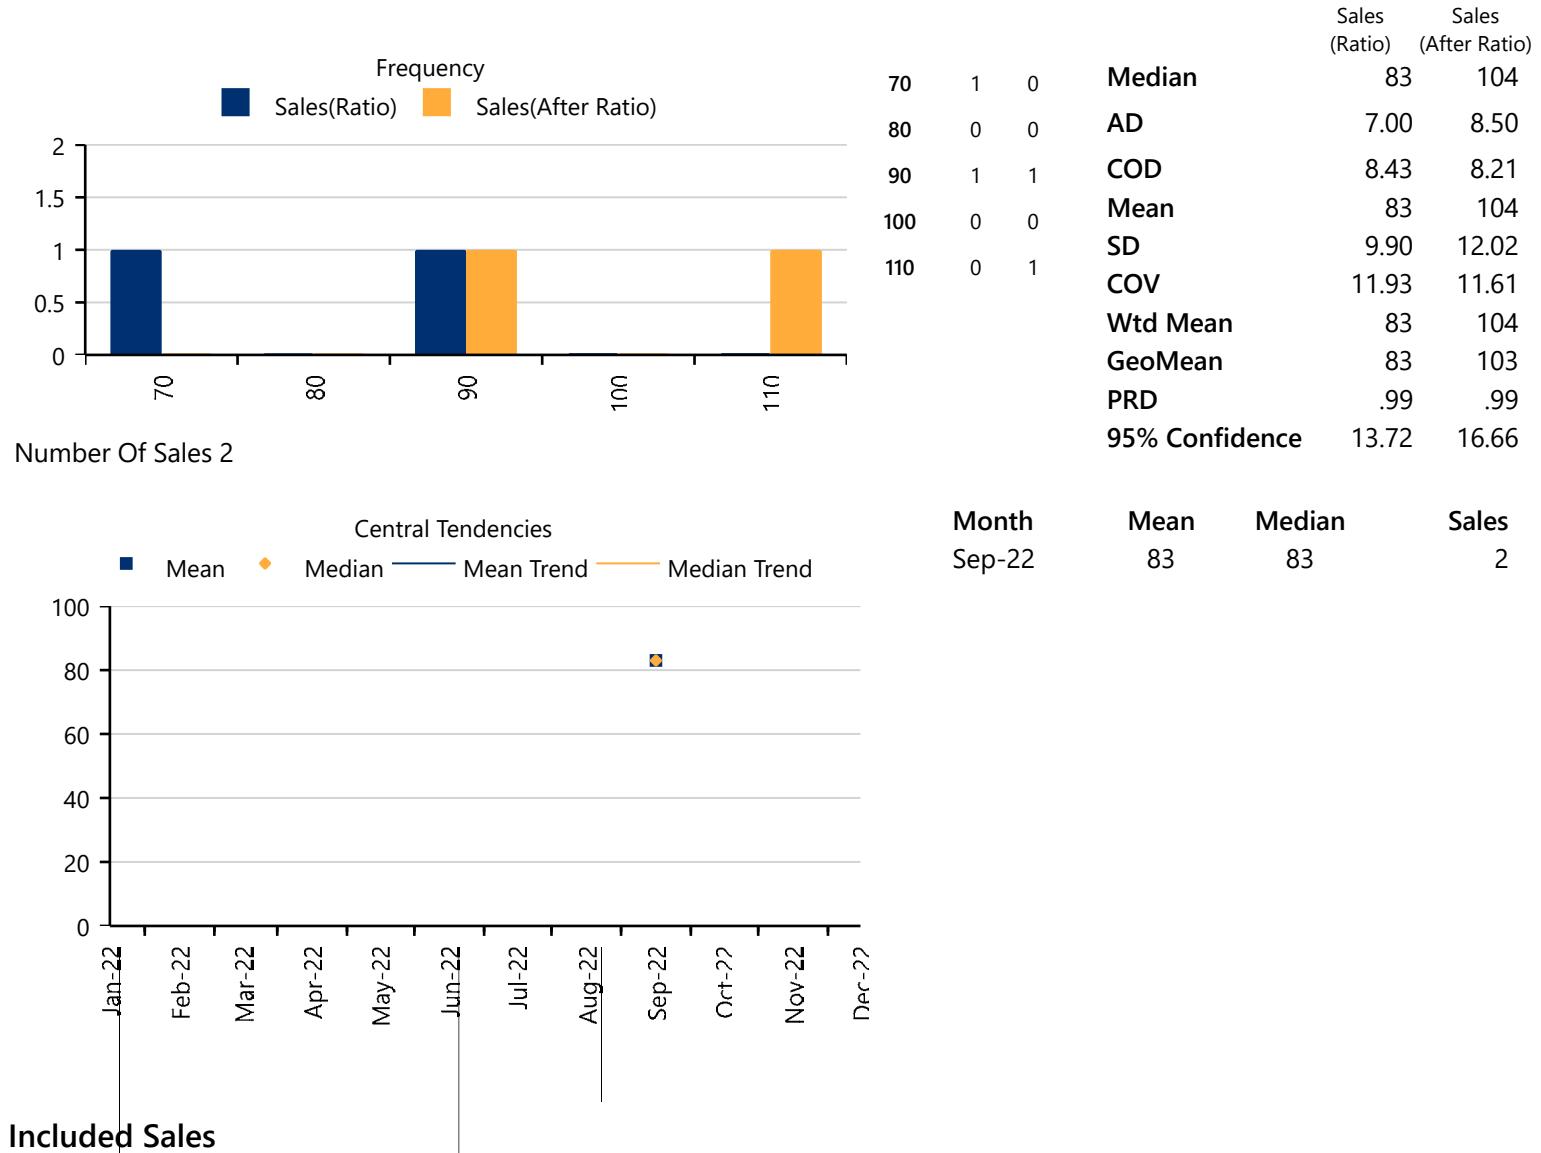

The two sales available for this study of vacant land in the City of Rainier occurred within days of each other and have been found to not be a good indicator of market. Therefore, the conclusion from the improved properties RMV Class 101 in MA 04 SA 00 is recommended, with a Selected Ratio of 80.

Explanation

RMV Class 101: SA 00

Nonhomogeneous Improved property, City of Rainier

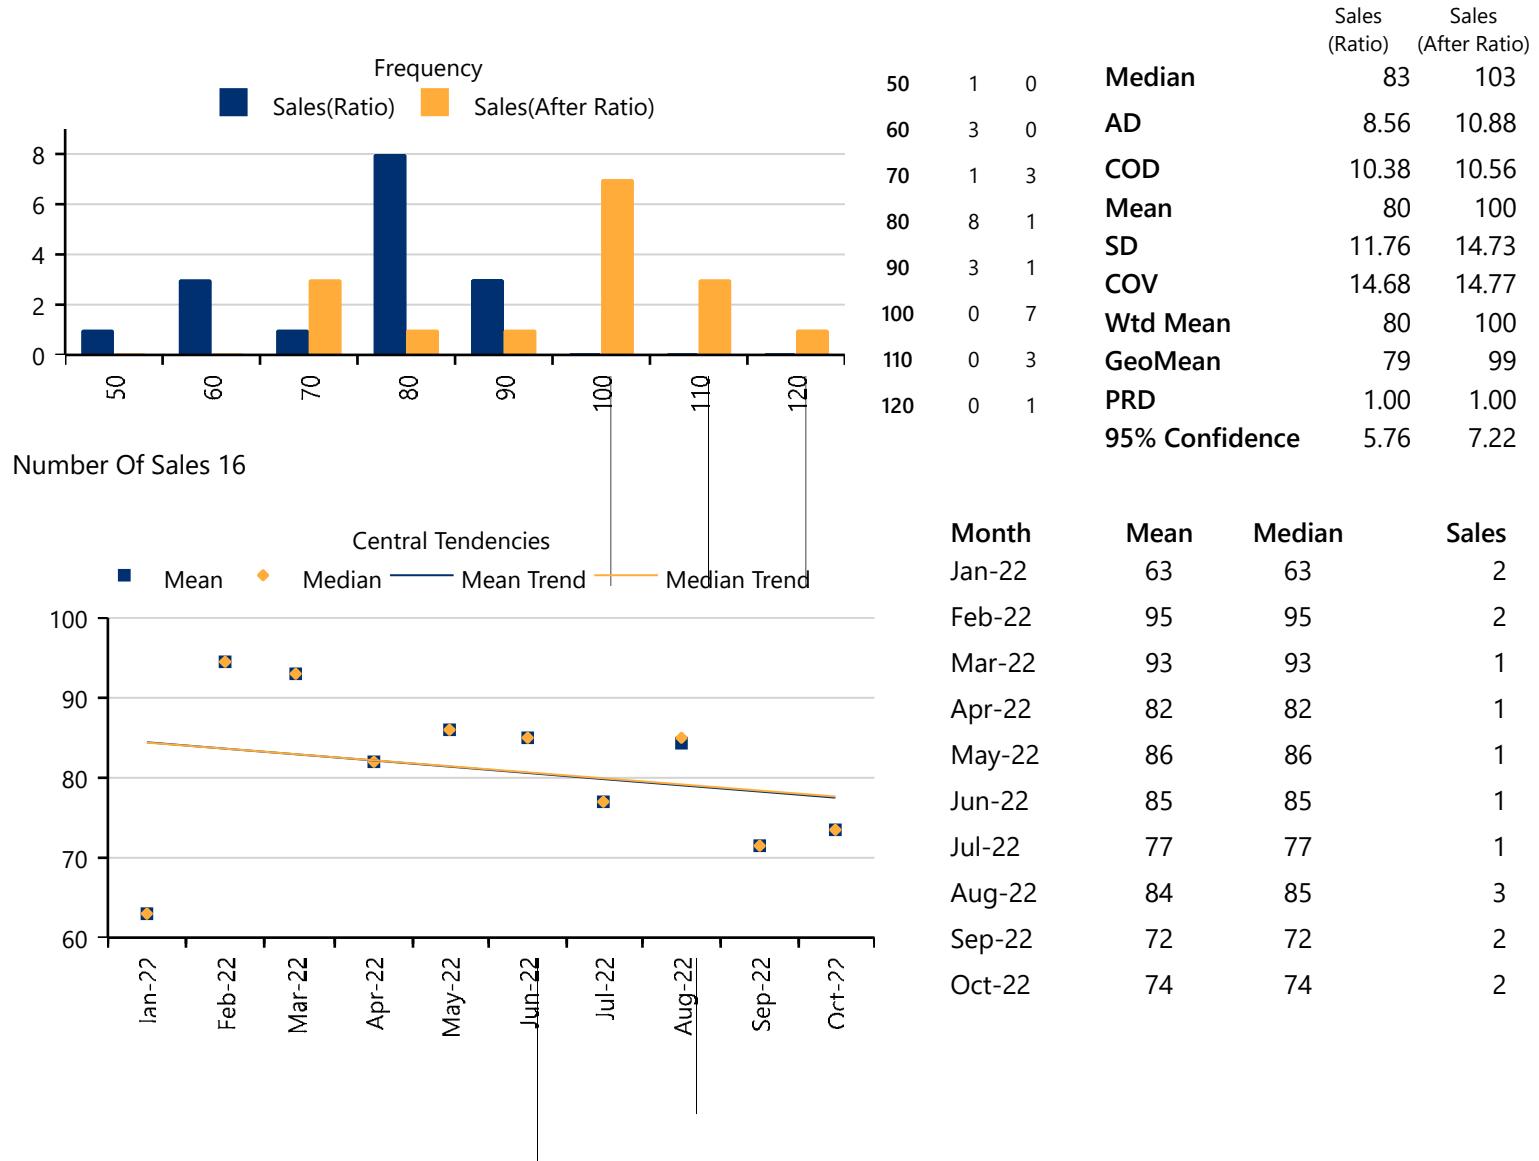

For this analysis of the property improved with conventionally built dwellings in the City of Rainier, the Mean (80) was selected as the best ratio indicator after the time adjustment was applied. This central tendency is further supported by the Weighted Mean (80). The Mean was applied to the data set, resulting in an Overall Adjustment Factor of 125.

Explanation

RMV Class 109: SA 00

Improved land – Manufactured Structure, City of Rainier

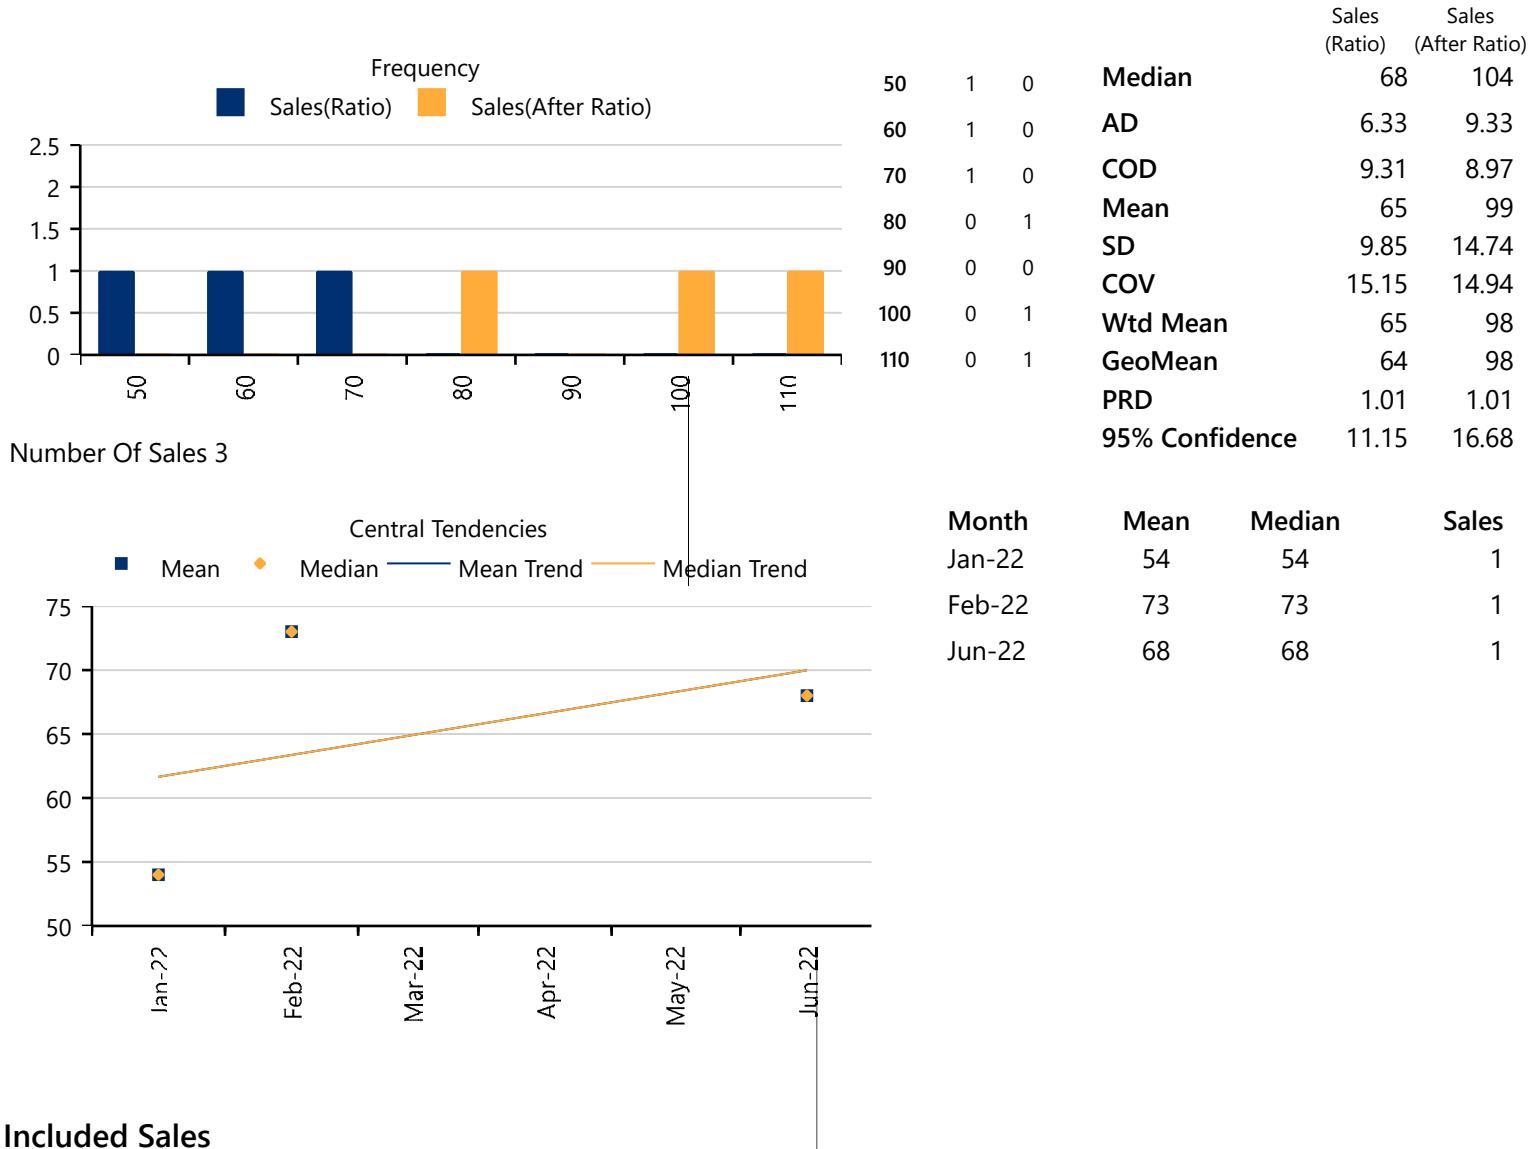

Properties that have Manufactured Structures as the main residence move quite differently within the market than those properties that are conventionally built. This is in part due to the increased demand for housing and the shortage of conventional built dwellings available. Because of this, it was decided the sales that were returned from this study are adequate and deemed appropriate. After applying the time adjustment of 1%, the Median (68) was selected, returning an Overall Adjustment Factor of 147.

Unimproved land – Rural Rainier (Value Zone 1) and Prescott

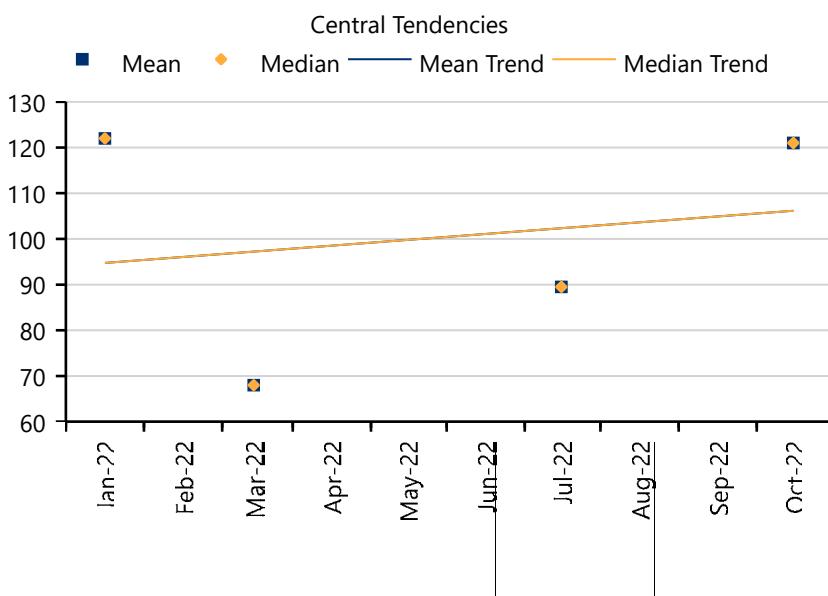

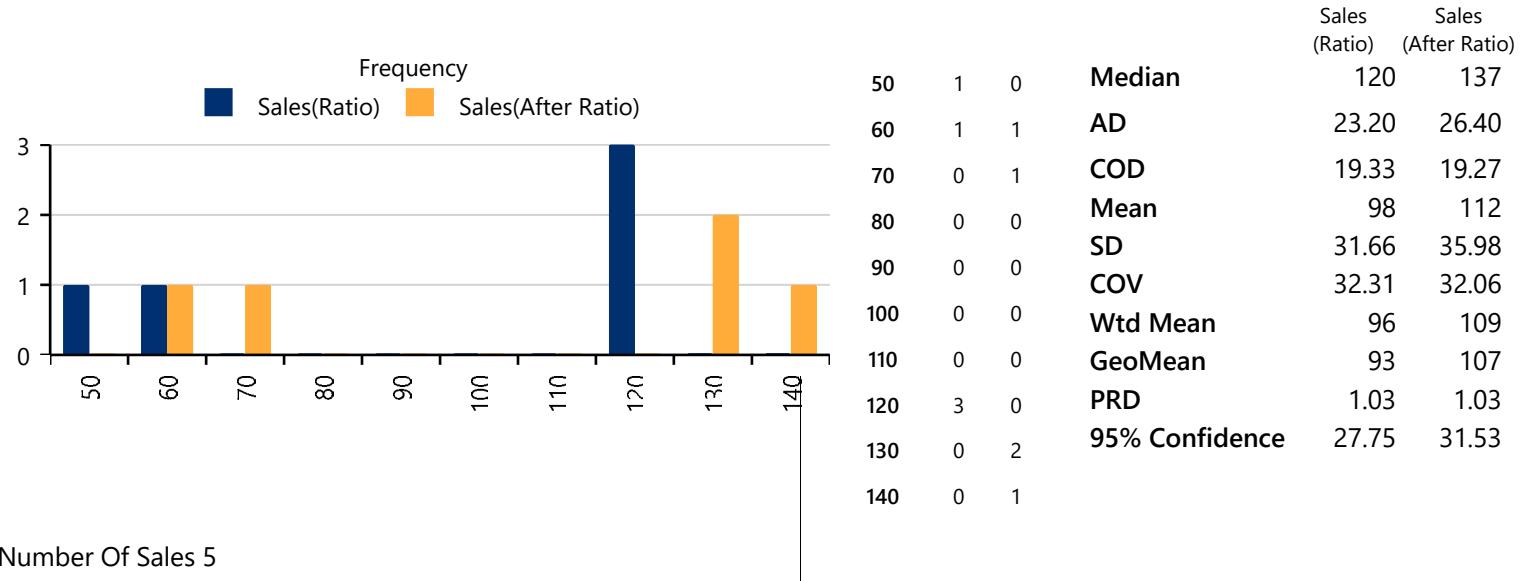

There are 5 sales available for this grouping of un-improved rural properties. However, the sales data makes up less than 1% of the total population and the sales sample contains high and low ratio indicators with a skewed distribution. Therefore, the conclusion from the RMV Class 401 has been deemed appropriate and applied here.

Improved land – Rural Rainier (Value Zone 1) and Prescott

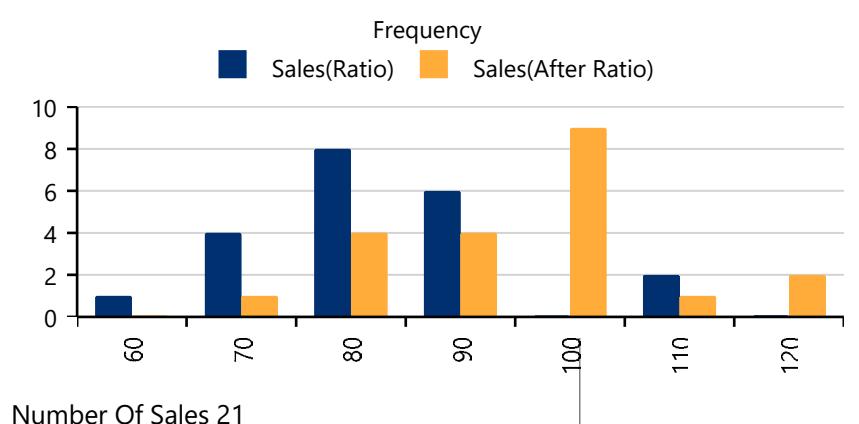

This study is comprised of two study areas; Rural Rainier (SA 41) and Prescott (SA 44). A former mill-town community, Prescott resembles a small subdivision and is located on the Columbia River south of the City of Rainier. For this analysis, the areas have been combined and analyzed together due to the similar way they move on the market. Once adjusting for market movement, the Median returned a ratio indicator of 88. This ratio was selected and applied to the dataset which resulted in an Overall Adjustment Factor of 114.

Improved land – Improved land – Manufactured Structure, Rural Rainier (Value Zone 2)

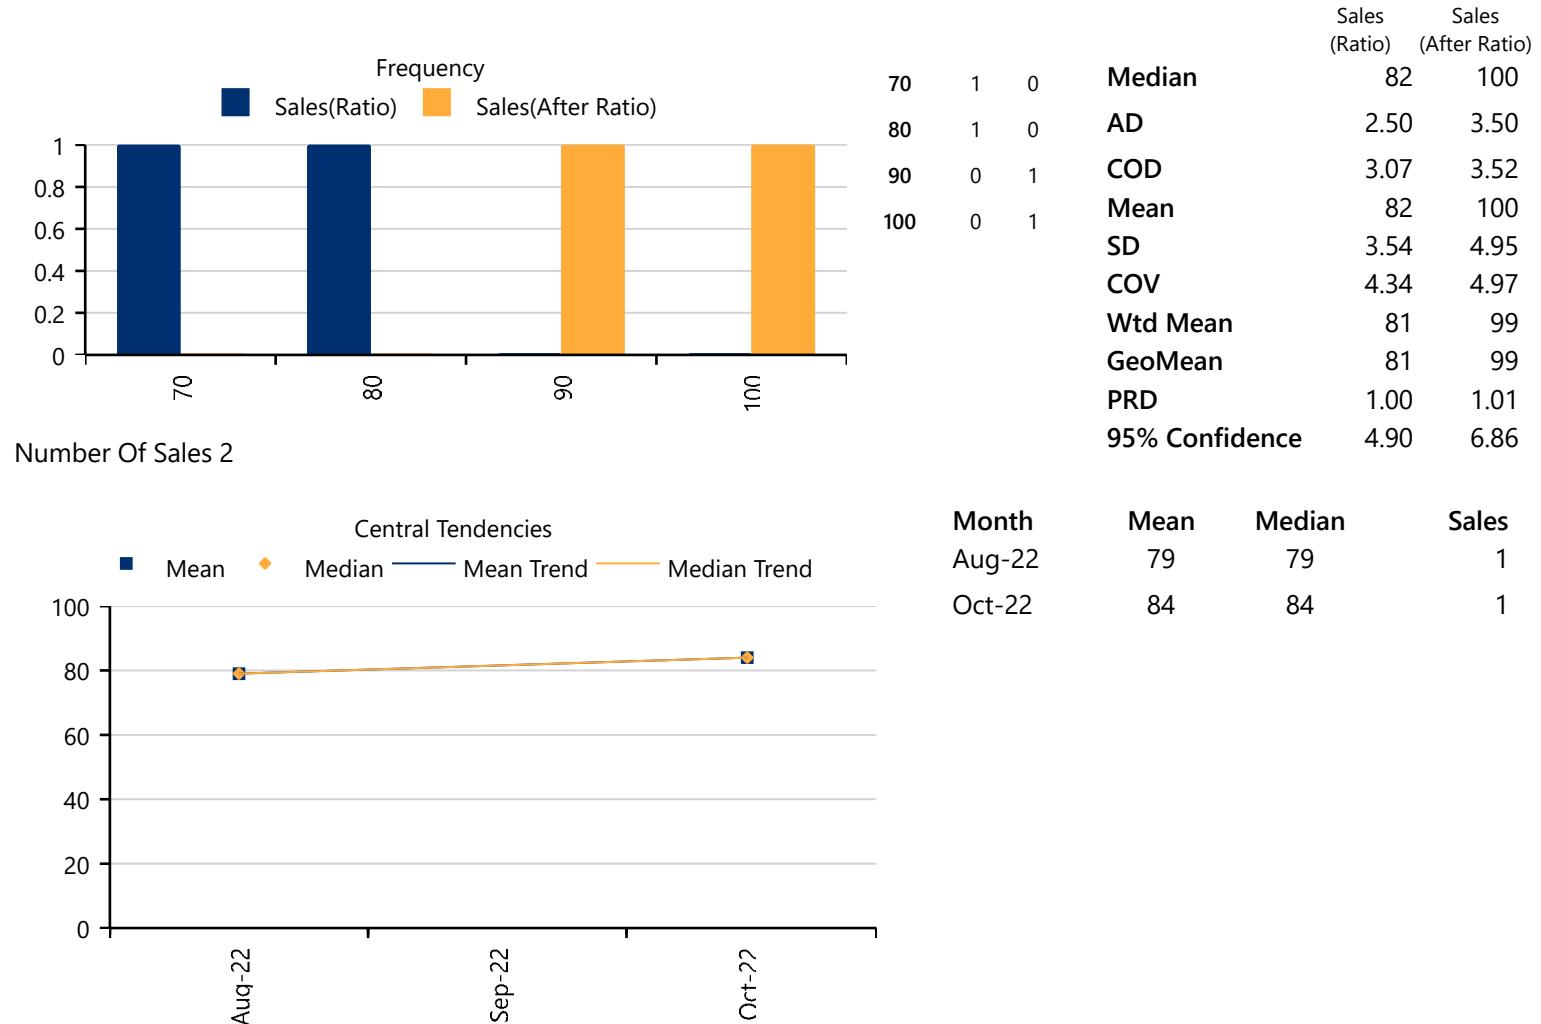

There are two sales available for this analysis and have been deemed good indicators of how the market is moving within this property type located in rural Rainier. Therefore, the Mean of 82 was selected and applied to the population after the sales were adjusted for time. This returned an Overall Adjustment Factor of 122.

Improved property – Manufactured Structures, City of Clatskanie

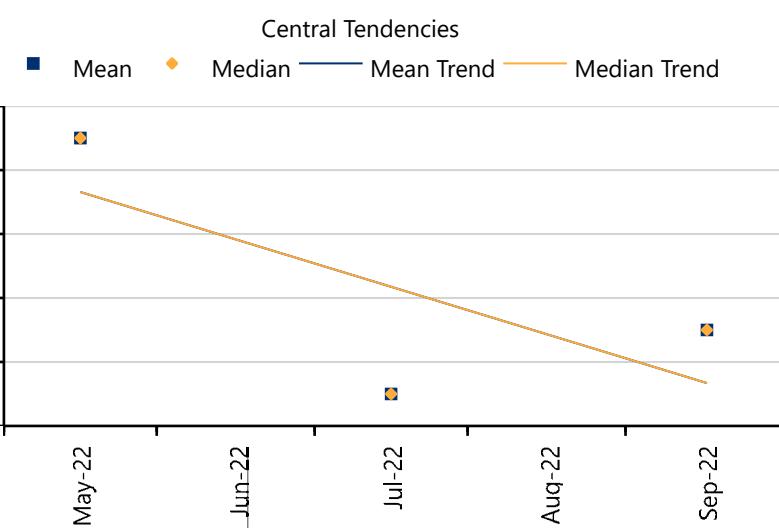

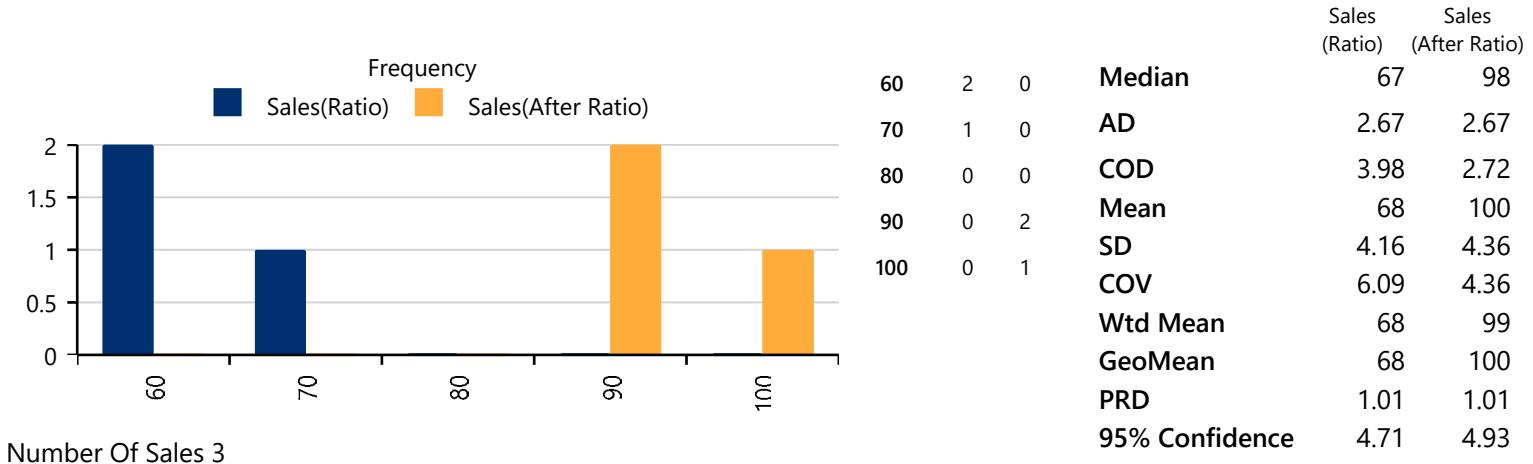

This study of manufactured structures on real property in the City of Clatskanie returned 3 sales. The dataset was found to be sufficient for determining an acceptable ratio indicator. The time adjustment conclusion (1%) was applied and the Mean, Weighted Mean and Geometric Mean returned a ratio of 68. The Mean was chosen and applied which resulted in an Overall Adjustment Factor of 147.

Nonhomogeneous Improved land – Duplex/Triplex/Fourplex, City of Clatskanie

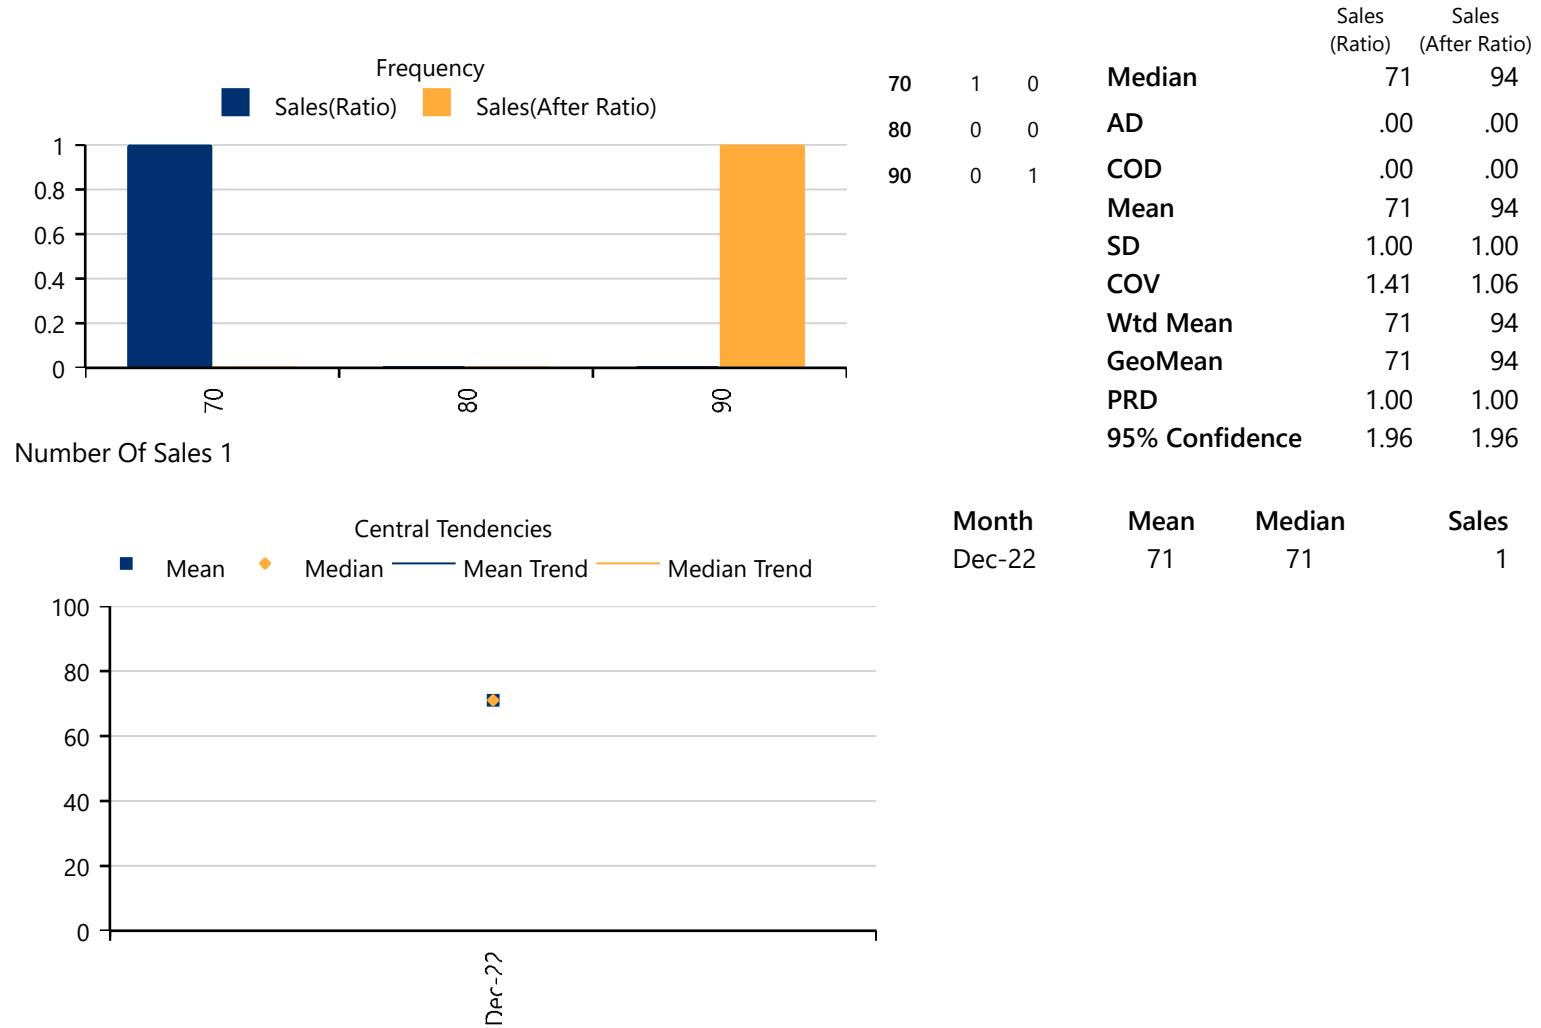

Only one sale is available of Duplex/Triplex/Fourplex properties which is a dataset that is too small to be an adequate indicator for this analysis. Because of this, it was decided to use the Selected Ratio of 76 from the MA 05 SA 00 RMV 101 study and to apply it here.

Unimproved land – Fishhawk Lake in Rural Clatskanie

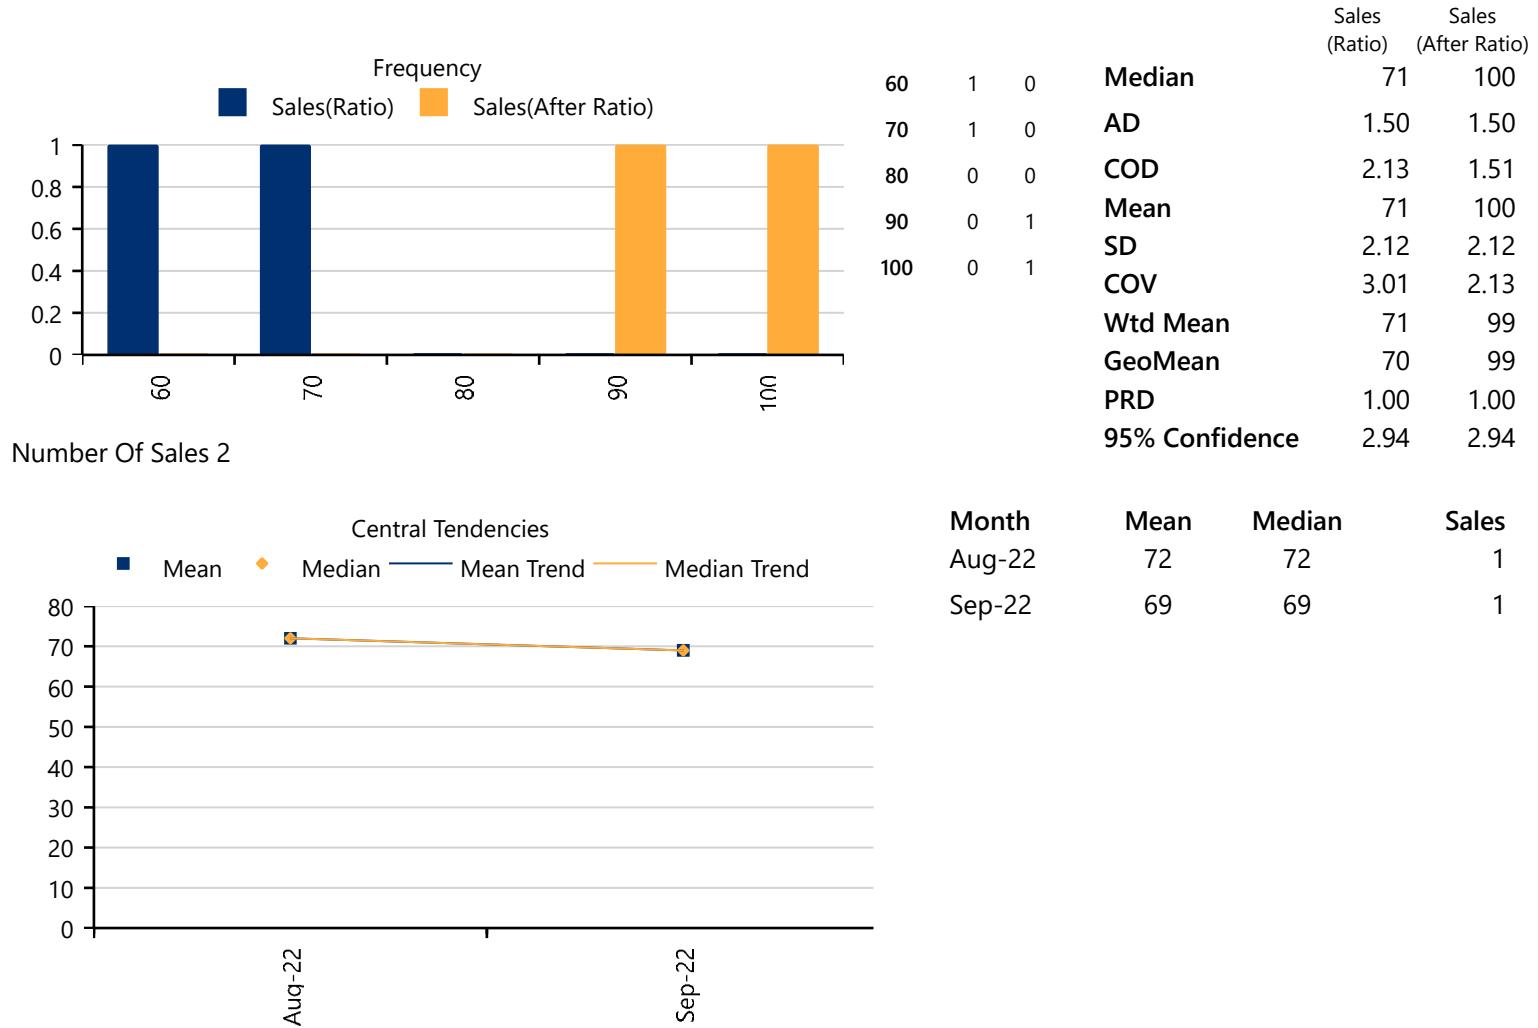

The dataset of vacant land in Fishhawk Lake returned two sales for this analysis which comprise 8% of the population of accounts. Once the array was time adjusted by 3%, the Mean, Median and Weighted Mean central tendencies returned the same ratio indicator of 71. The Mean was selected and once applied returned an Overall Adjustment Factor of 141.

Explanation

Improved land – Fishhawk Lake in Rural Clatskanie
 RMV Class 401: SA 36

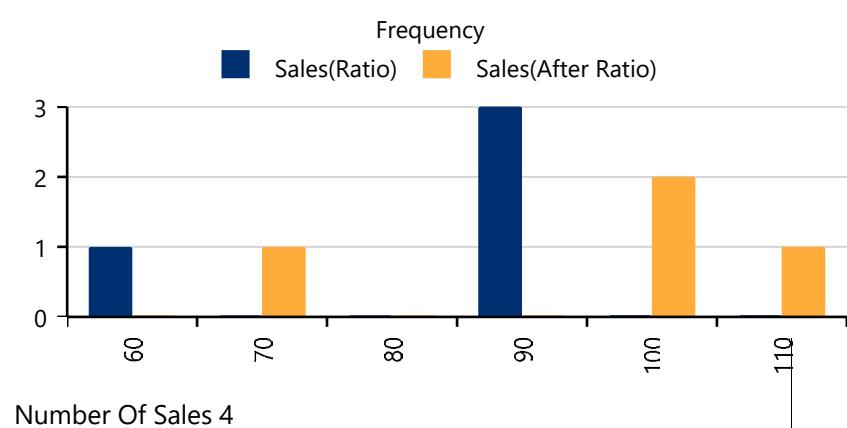

This study is comprised of properties located in the Fishhawk Lake Estates area. This location is a private community that surrounds a 100-acre man-made lake. It is distinctive due to the nature of the market it encompasses: recreational lake, vacation get-a-way and second home type properties. For this analysis, 4 sales were available and were found to be sufficient indicators for the market. Once the time adjustment was administered, the Selected Ratio of 90 (Mean) was applied to this population of accounts.

Explanation

RMV Class 400: SA 51

Unimproved land, Rural Clatskanie (Value Zone 1)

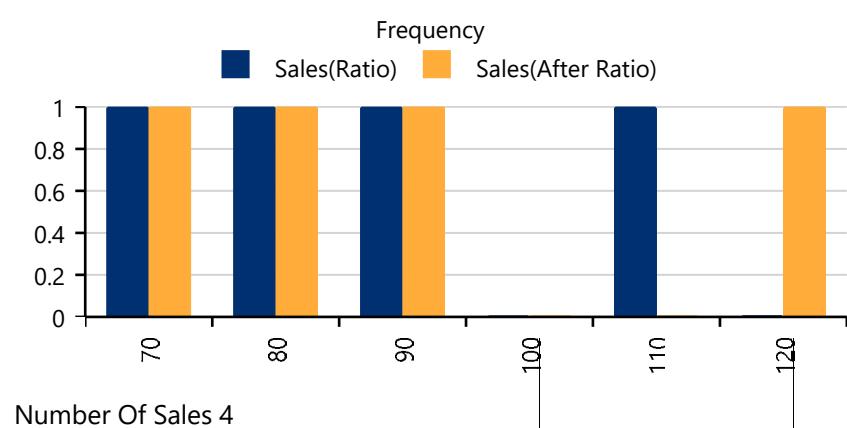

This dataset returned 4 sales for use in this study of vacant land located in rural Clatskanie, Value Zone 1. After reviewing the sales array that was returned, it was deemed an inadequate sample for this analysis due to disparity between acreage sizes and the inconsistency between the sale dates. Therefore, the Selected Ratio of 95 from the RMV Class 401 study located in MA 05 SA 51 was deemed fitting, returning a Land Factor of 105.

Explanation

RMV Class 409: SA 51

Improved property – Manufactured Structure, Rural Clatskanie (Value Zone 1)

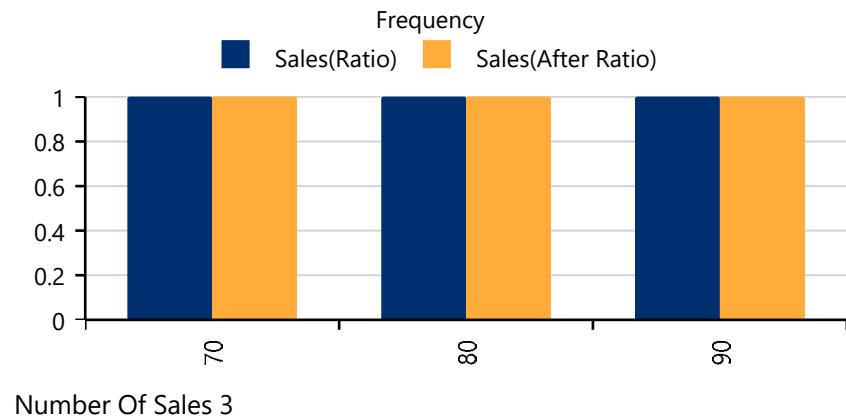

For this grouping of rural Clatskanie properties improved with manufactured structures, too few sales were found that indicate market perception for this property classification. Therefore, it was decided to apply the conclusion from the RMV 401 MA 05 SA 51 analysis here with an Overall Adjustment Factor of 105 (Selected Ratio of 95).

Improved Land – Dike Land, Rural Clatskanie

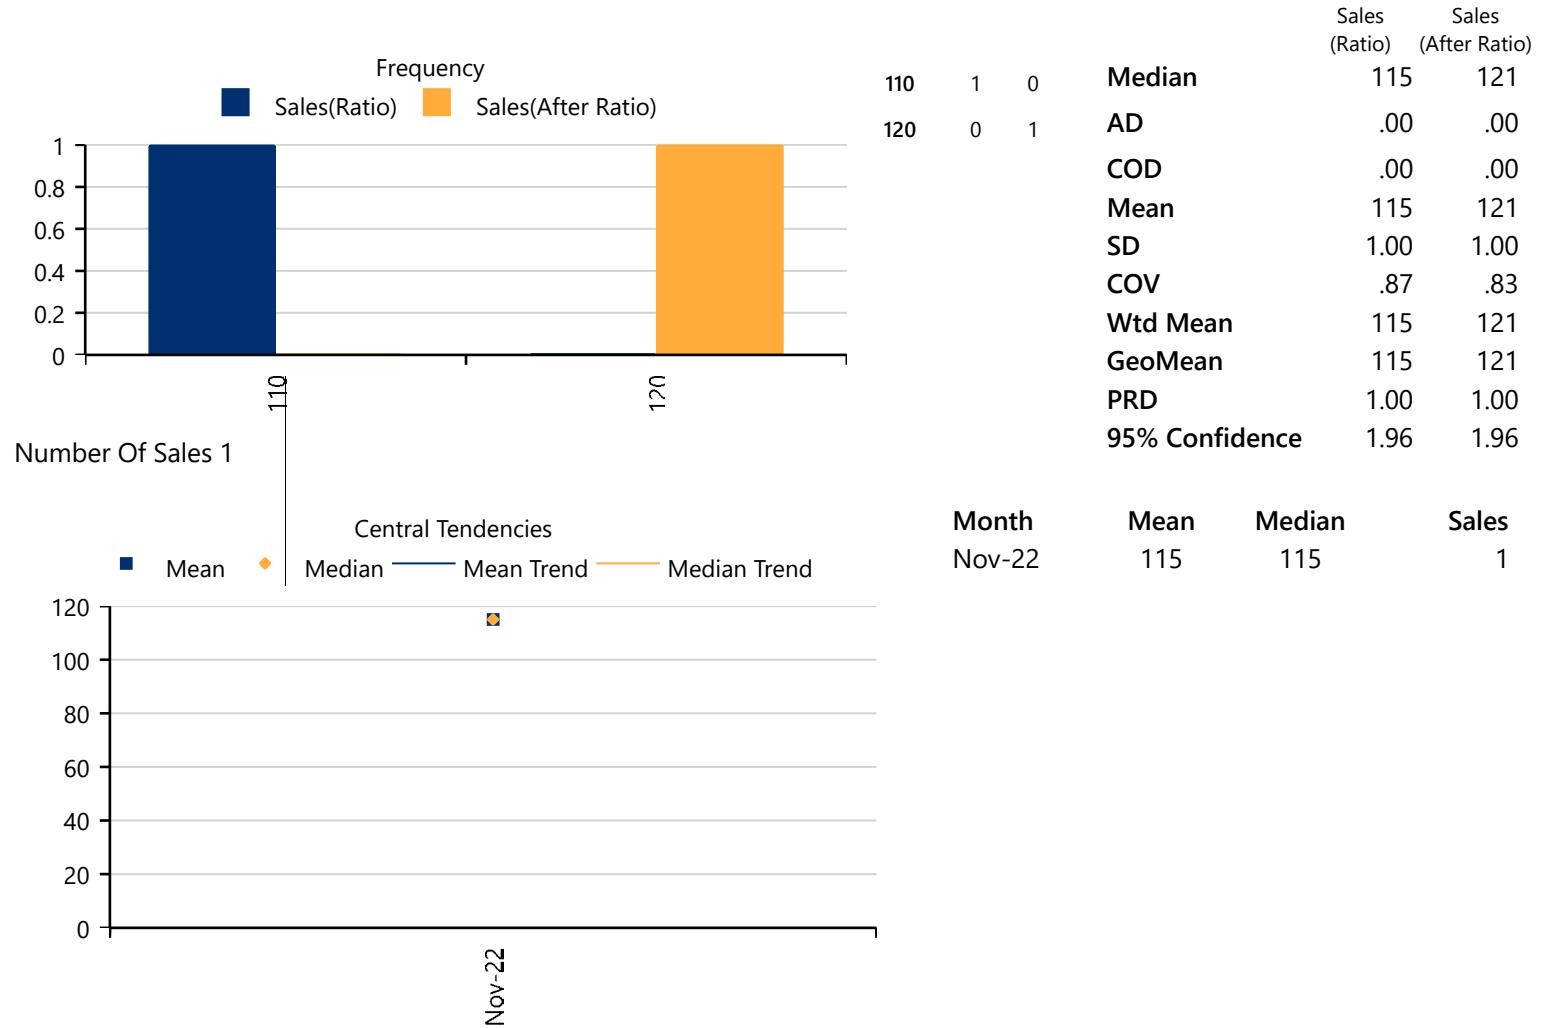

Only one sale was identified in this study period, a sample too small to use as a determination of the current market for improved property located in the Clatskanie Dike area. Therefore, it is recommended that the conclusion from the MA 05 SA 51 for improved property study be applied here (Selected Ratio of 95).

Explanation

RMV Class 101: SA 01

Nonhomogeneous Improved land, City of Columbia City General Area

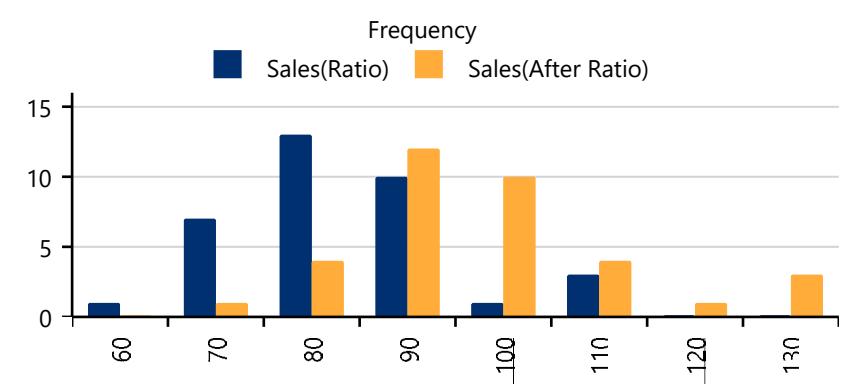

This study is comprised of improved land within the small community of Columbia City. There are 35 sales available comprising 4.70% of the total population. The Median of 86 was selected as an appropriate indicator and has been adjusted by the conclusion of 1% from the RMV Class 1XX time study. Once the Median was applied, an Overall Adjustment of 116 was returned.

Explanation

RMV Class 100: SA 15

Unimproved land, City of Columbia City River Front

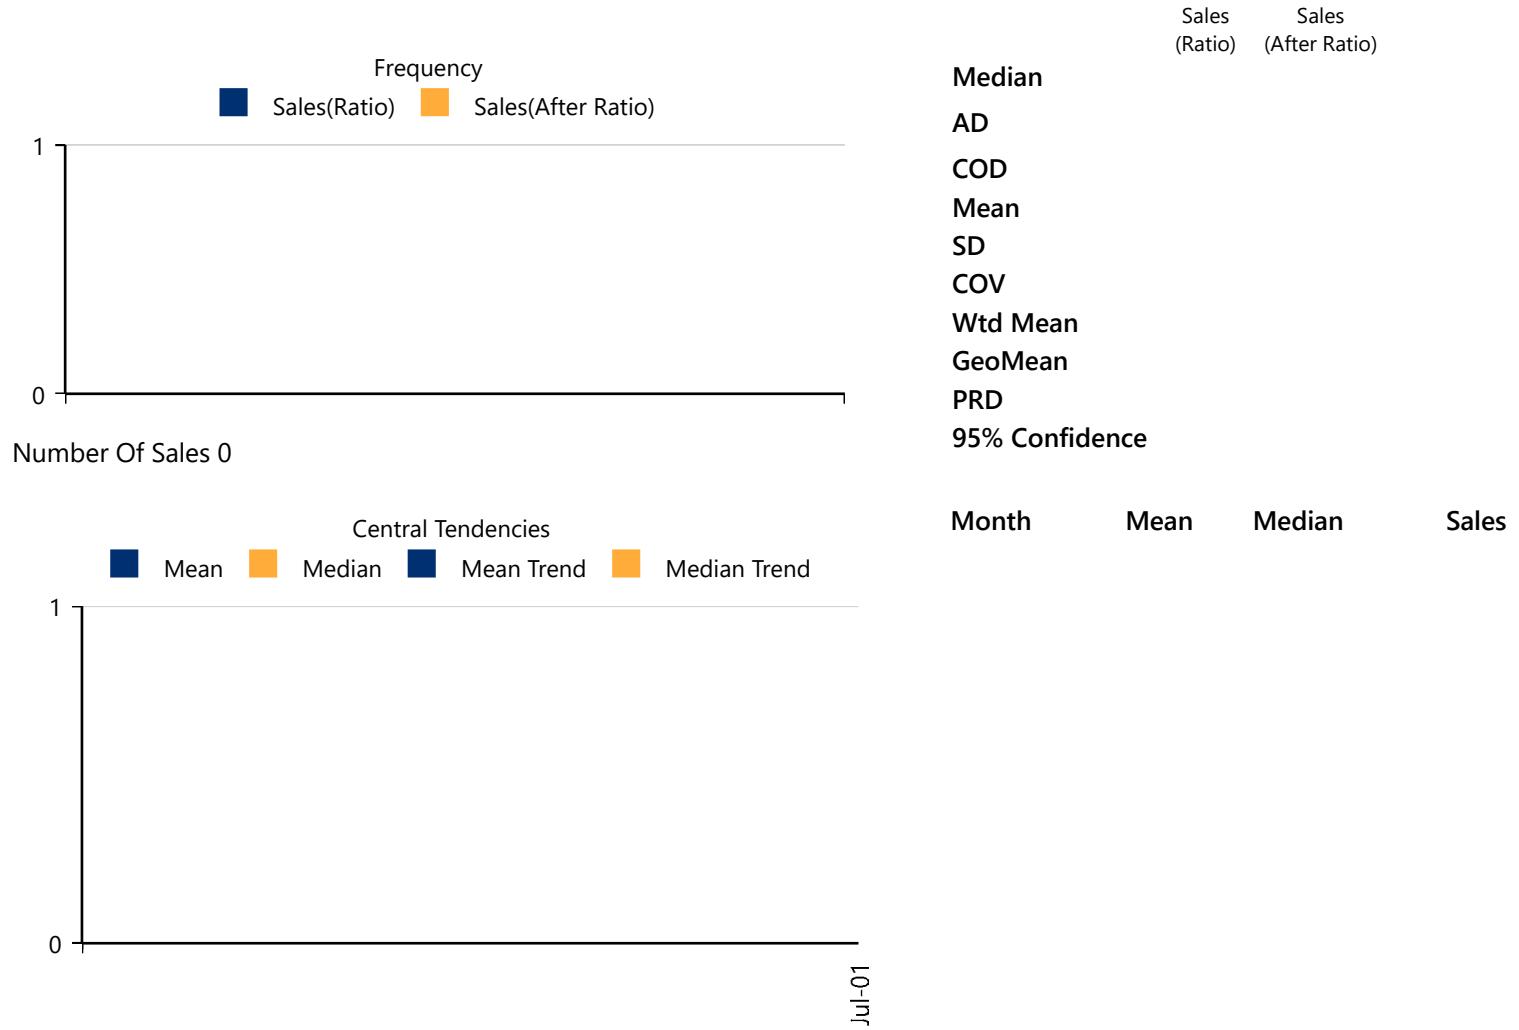

Columbia City River Front property is located on the Columbia River and has spectacular views of multiple mountains. There are no sales available for this population of 5 therefore, the conclusion from the RMV 101 study located in MA 06 SA 01 was deemed appropriate and applied to this population of accounts.

Explanation

RMV Class 101: SA 15

Nonhomogeneous Improved land, City of Columbia City River Front

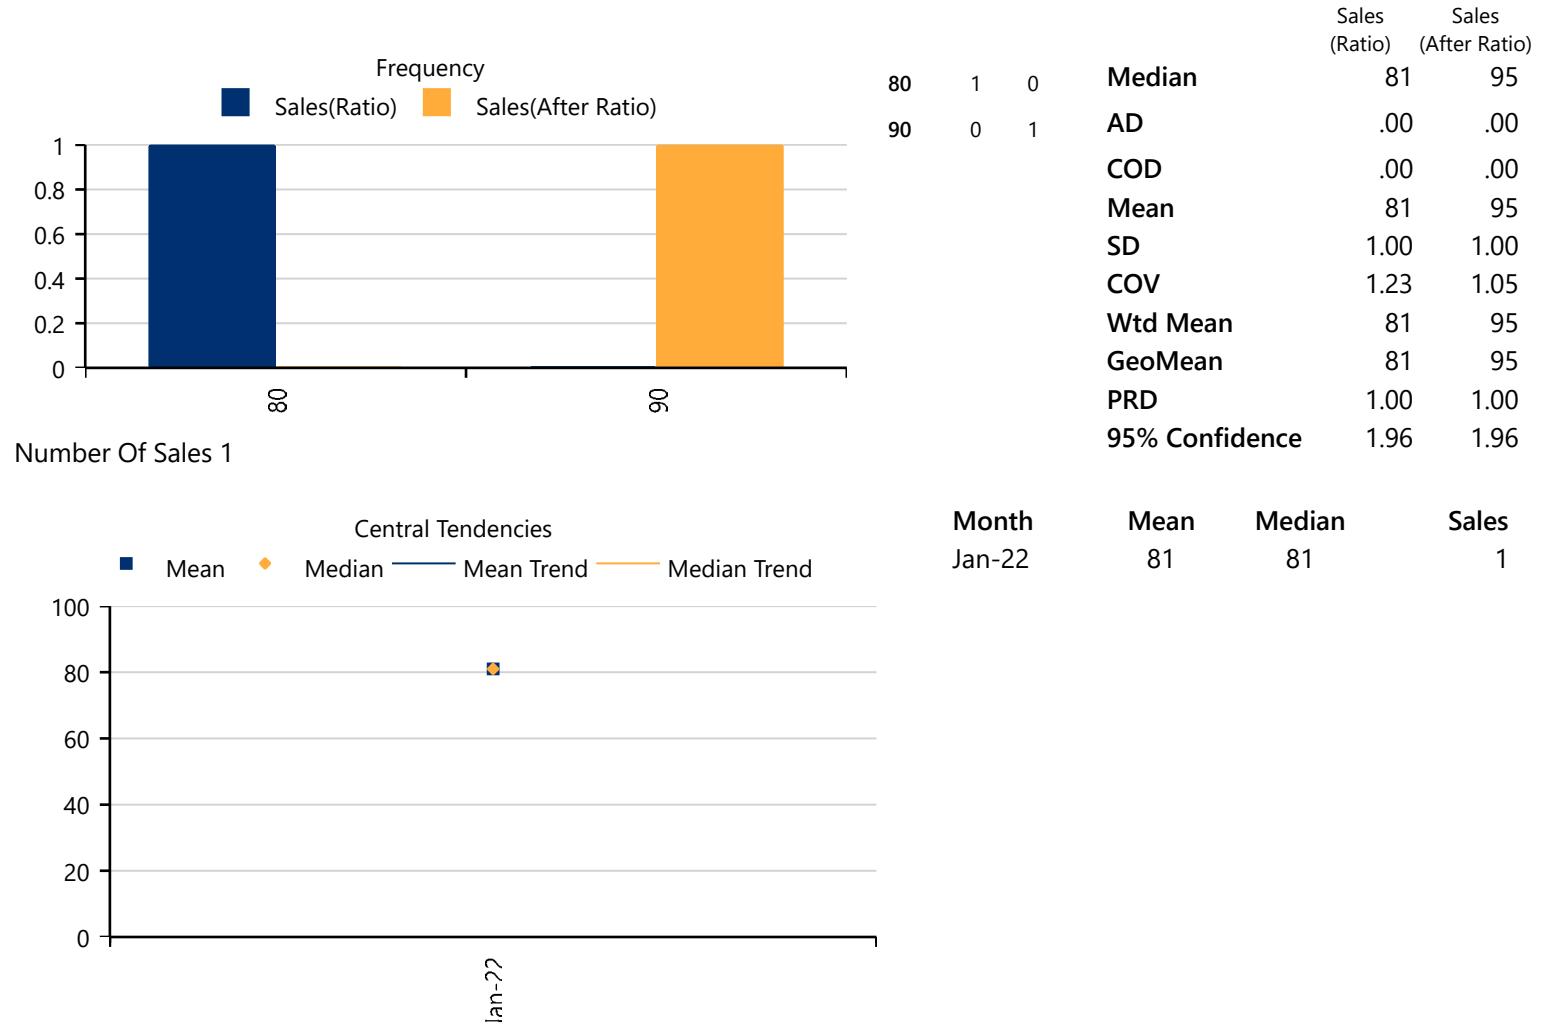

For this analysis of premium River Front properties located in the bedroom community of Columbia City, one valid sale was returned. Many of the properties along the Columbia River possess mountain views and have personal docks for easy access to the river. The single sale was found to be unreliable and insufficient to determine a reflective market trend. Therefore, the Overall Adjustment Factor of 116 from the MA 06 SA 01 improved property analysis was deemed appropriate and applied here (Selected Ratio 86).

Explanation

RMV Class 400: SA 61

RMV Class 400: SA 67

Unimproved land, Rural St. Helens and Warren (Value Zone 1)

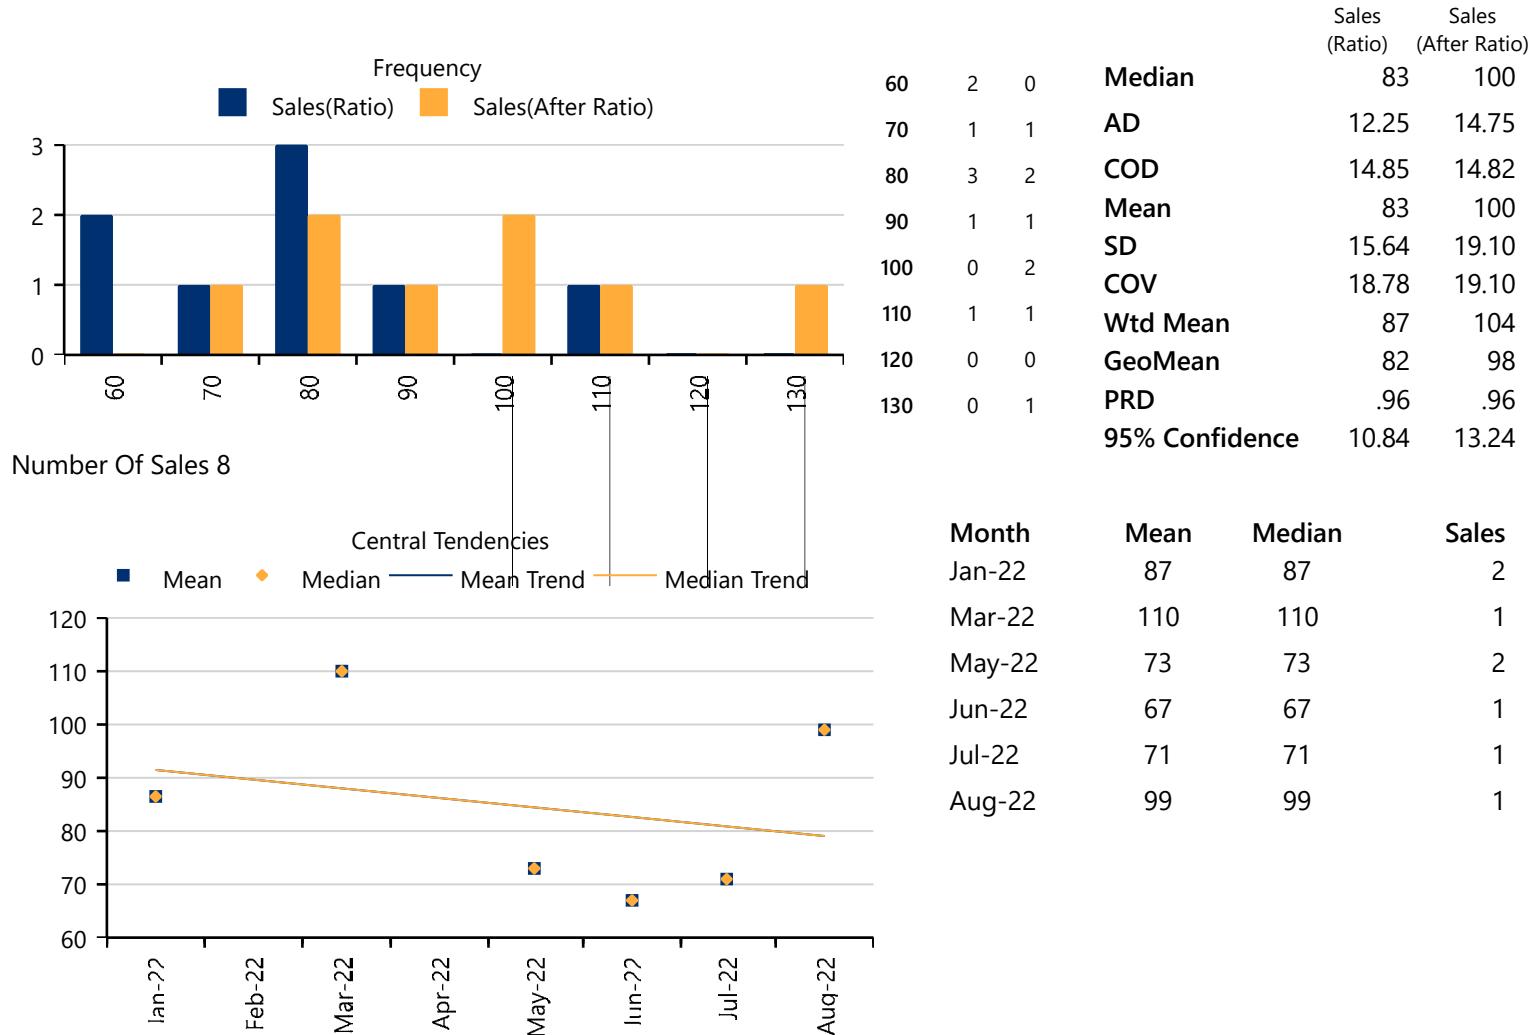

For this analysis, it was decided to study MA 06 SA 61 and SA 67 together due to the similar way in which both areas move on the open market. The time adjustment conclusion of 3% was applied to the data set. Once applied and calculated, the Mean returned a ratio of 83. This central tendency was applied as the best indicator for this classification of undeveloped properties surrounding the City of St. Helens and Warren, resulting in a land trend factor of 120.

Explanation

RMV Class 401: SA 61

RMV Class 400: SA 67

Improved land, Rural St. Helens and Warren (Value Zone 1)

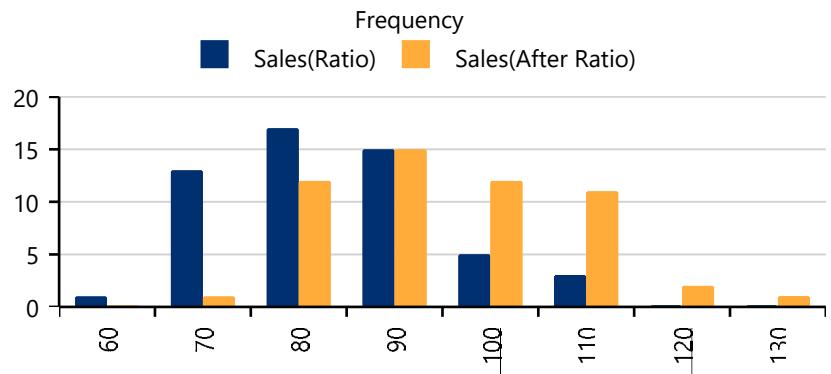

For this analysis of property improved with conventionally built dwellings located in MA 06 SA 61 and 67, little market distinction has been found between the areas aside from school district boundaries. Therefore, it was deemed appropriate to analyze the two areas together. The Mean (88) was selected as the best ratio indicator and this central tendency is further supported by the Weighted Mean (88). The Mean was applied, resulting in an Overall Adjustment Factor of 114.

Explanation

RMV Class 400: SA 62

Unimproved land, Rural St. Helens, Warren (Value Zone 2)

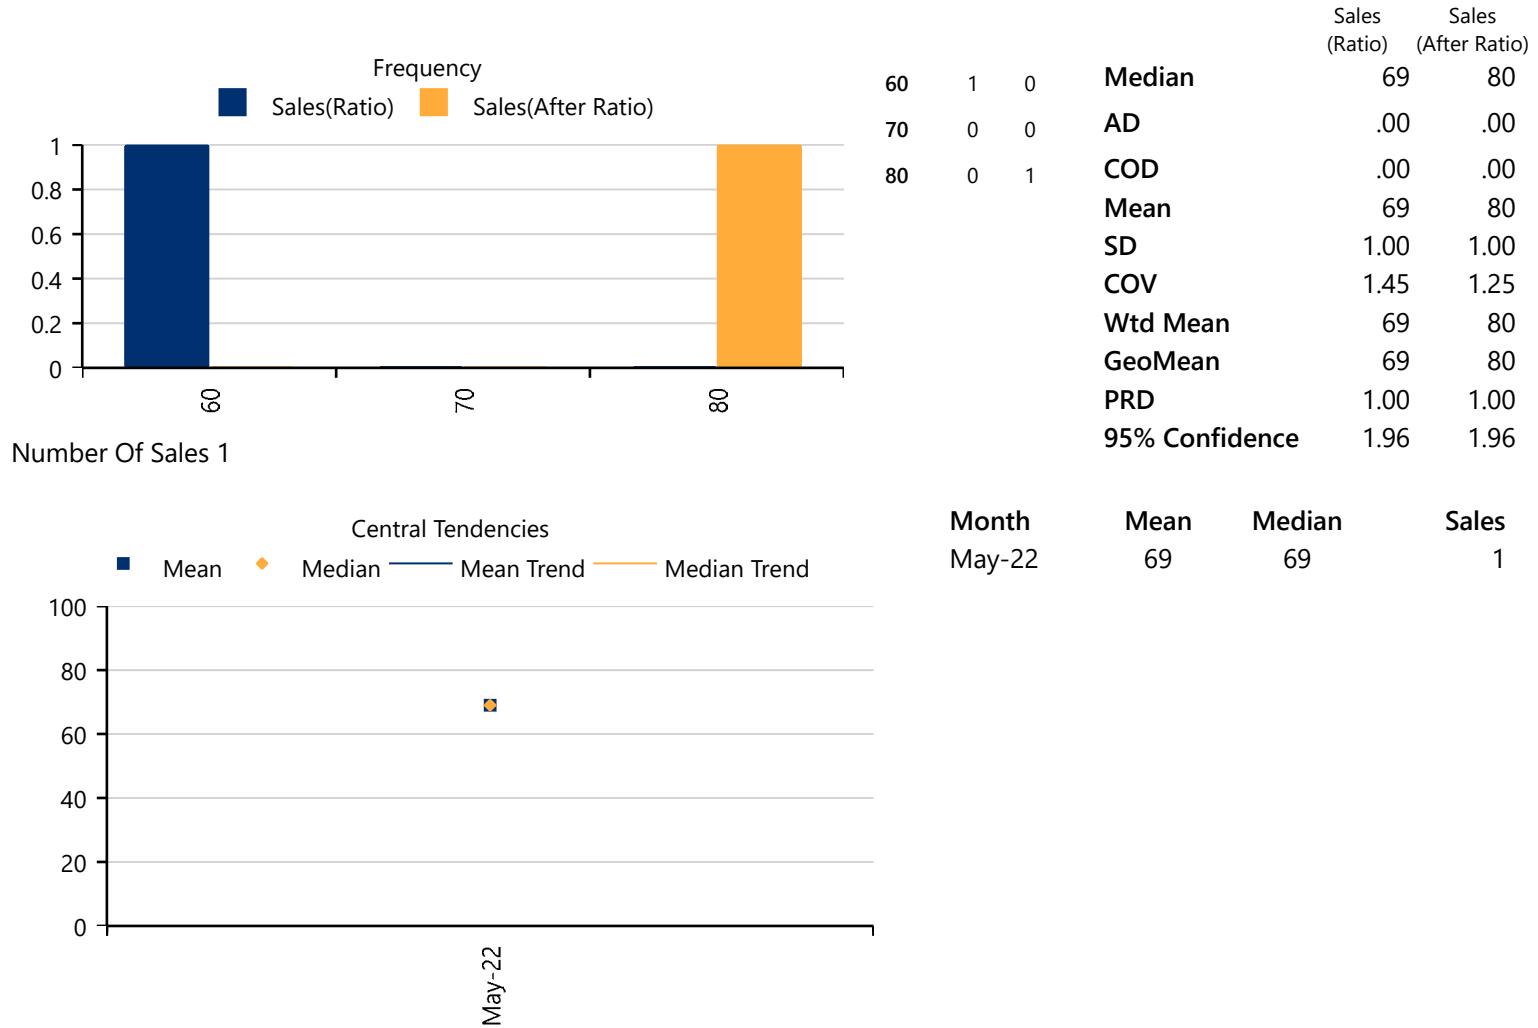

Having a single sale available is insufficient to study since the sales sample is too small to present a clear picture of the market. Therefore, it has been decided to use the Selected Ratio of 86 from the improved single-family dwelling study in the same area (RMV 401 MA 06 SA 62).

Explanation

RMV Class 401: SA 62

Improved land, Rural St. Helens, Warren (Value Zone 2)

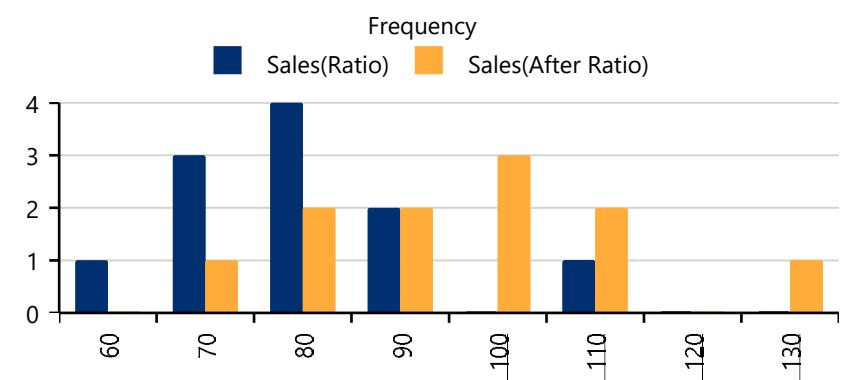

This grouping of rural properties returned a Mean and Weighted Mean ratio of 86 after the time adjustment conclusion (3%) was applied. These indicators were further supported by the Median (87) and Geometric Mean (85). The Mean central tendency was selected and applied to the dataset returning an Overall Adjustment Factor of 116.

Personal Property Manufactured Structures - Crestwood Village, City of St. Helens

Crestwood Village is located within the city limits of St. Helens. This park is adjacent to Dalton Lake (a designated nature preserve) and has numerous nature trails and footpaths. Amenities include: RV parking, wide streets, private yards and detached garages. For this study, 10 sales were available for analysis. The dataset of sales comprises 8% of the total population for this classification of property. After review, the time adjusted Mean of 74 was selected as the best indicator. Once applied, the Overall Trend Factor returned a ratio of 135.

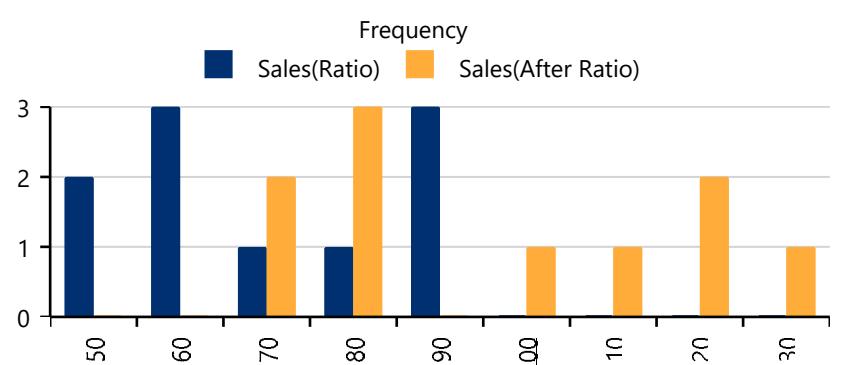

Note: for 2023, a complete setup and market analysis of Crestwood Village (SA 27), Columbia City Estates (SA 28), and Springlake Park (SA 30) was performed and implemented.

Personal Property Manufactured Structures – Springlake Park, City of Scappoose

This study is comprised of personal property manufactured structures located within an exclusive park called "Springlake Park Community". This is a unique community for those who are age 55+ and supports numerous amenities: a community rec room, outstanding landscaping and walking paths, two lakes, a RV parking, and tenant owned interest in the park. The park itself is close in proximity to shopping, medical facilities, restaurants, and the Portland Metropolitan area. After review of the sales array and finding the sales are sufficient and adequate, the conclusion from the time adjustment study (3%) was applied. The Median central tendency of 89 was selected and applied to the population as a good and sufficient indicator of the current market. Once applied, this returned an Improvement Factor of 112.

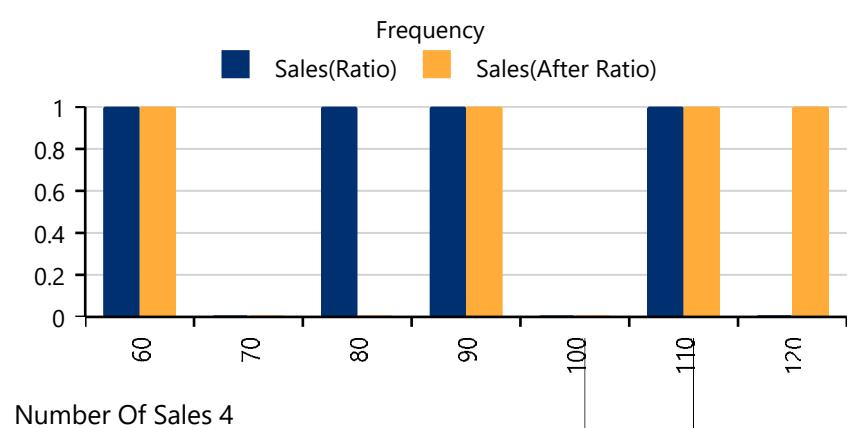

Note: for 2023, a complete setup and market analysis of Crestwood Village (SA 27), Columbia City Estates (SA 28), and Springlake Park (SA 30) was performed and implemented.

Explanation

RMV Class 111: SA 97

Boathouses – Countywide

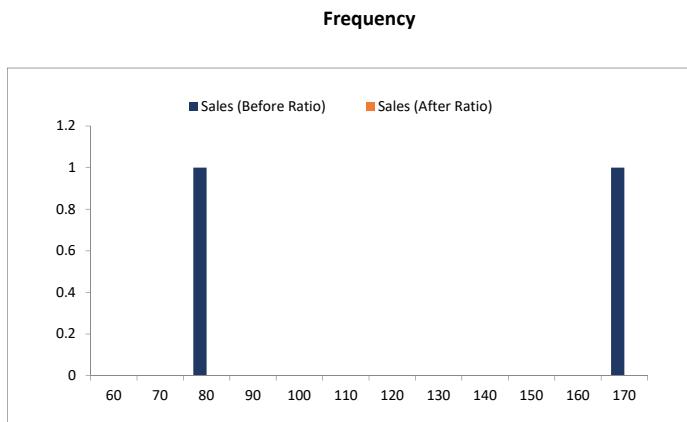

Two sales were found in this study area, both occurring within two months of each other. The ratios returned for these sales were widely dissimilar (84 and 170) and are a poor depiction of market indicators for this property classification. Therefore, it was deemed appropriate to apply the selected ratio of 96 from the RMV 111 SA 95 (houseboats and combinations) analysis here without adjusting for market movement.

Explanation

Commercial – South

RMV Class 200: MA 01, MA 02 and MA 06; Study Area 00

Unimproved land – Commercial, South County (St. Helens, Warren and Scappoose)

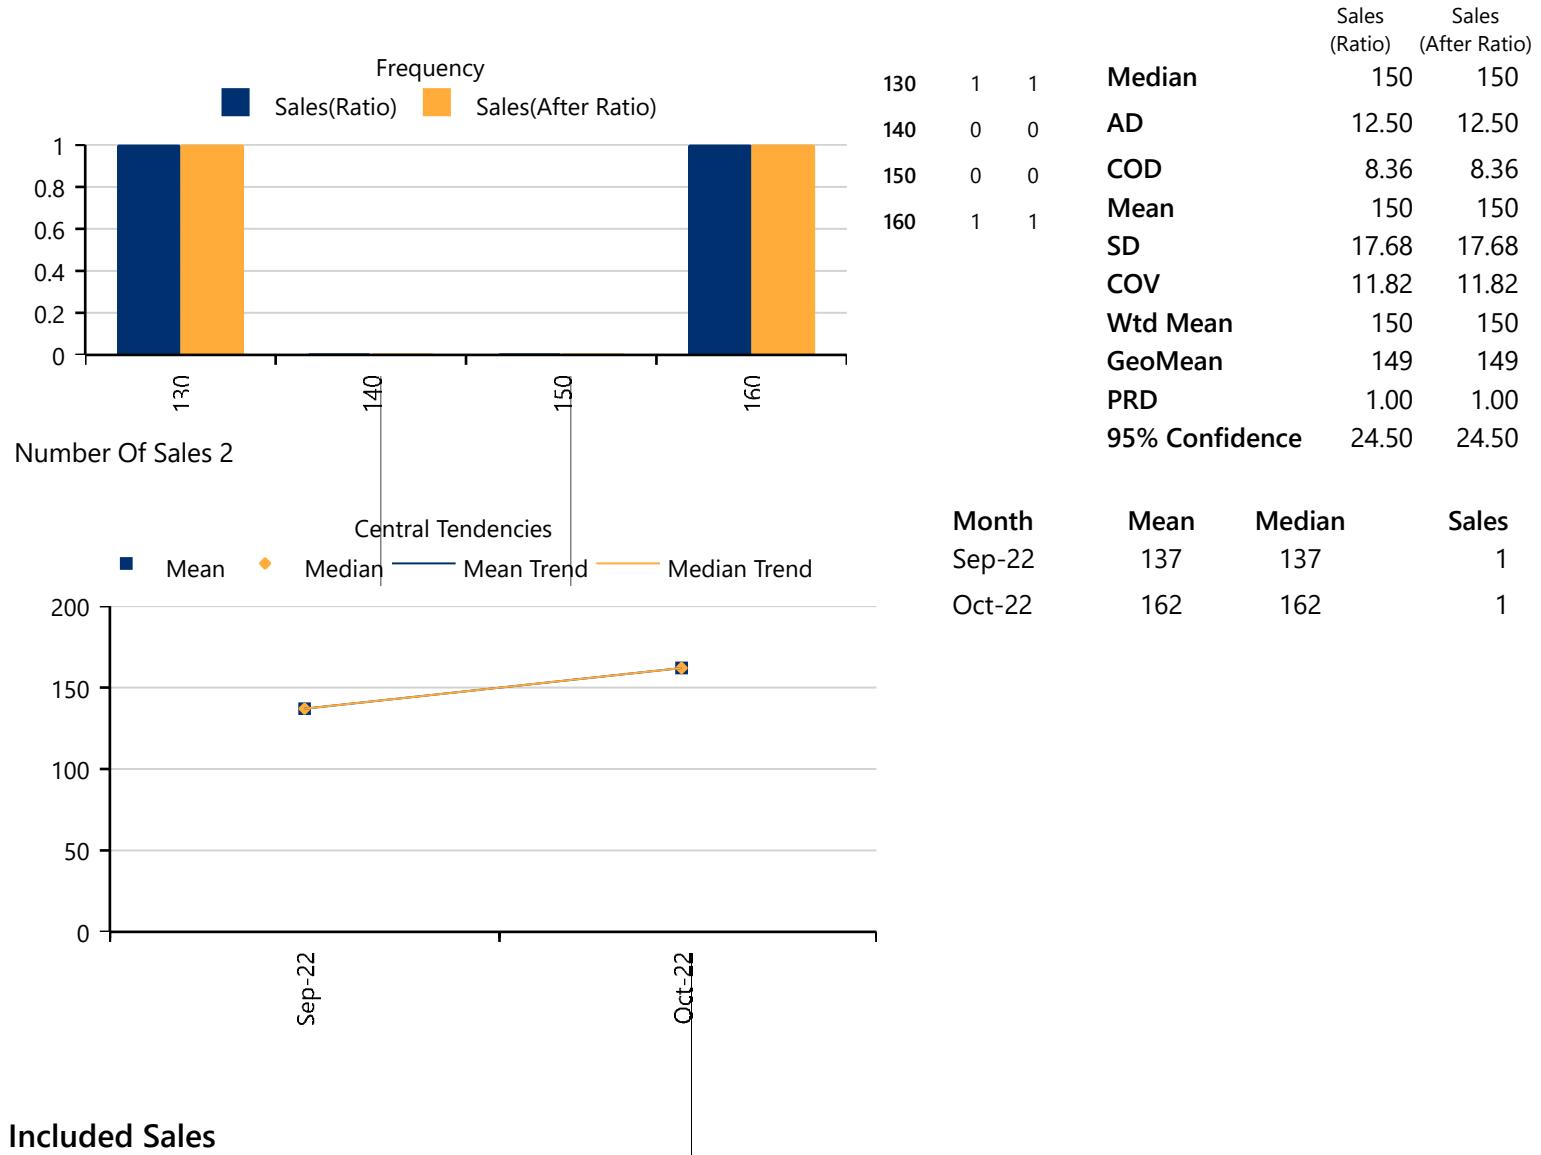

For this analysis of Commercial land in South County, two sales were returned. Upon review of the sales array, it was noted that both sales are located in the same area, with no direct access to the highway. In addition, the sales occurred within a month of one another and does not provide a clear representation of how this property classification moves on the open market. Because of these factors, it was deemed that the sales array is inadequate to determine a reasonable trend for unimproved commercial property located in the south county area. Therefore, it was decided that no adjustment would be applied to this grouping.

Explanation

RMV Class 201: MA 01, MA 02 and MA 06; Study Area 00

Improved land – Commercial, South County (St. Helens, Warren and Scappoose)

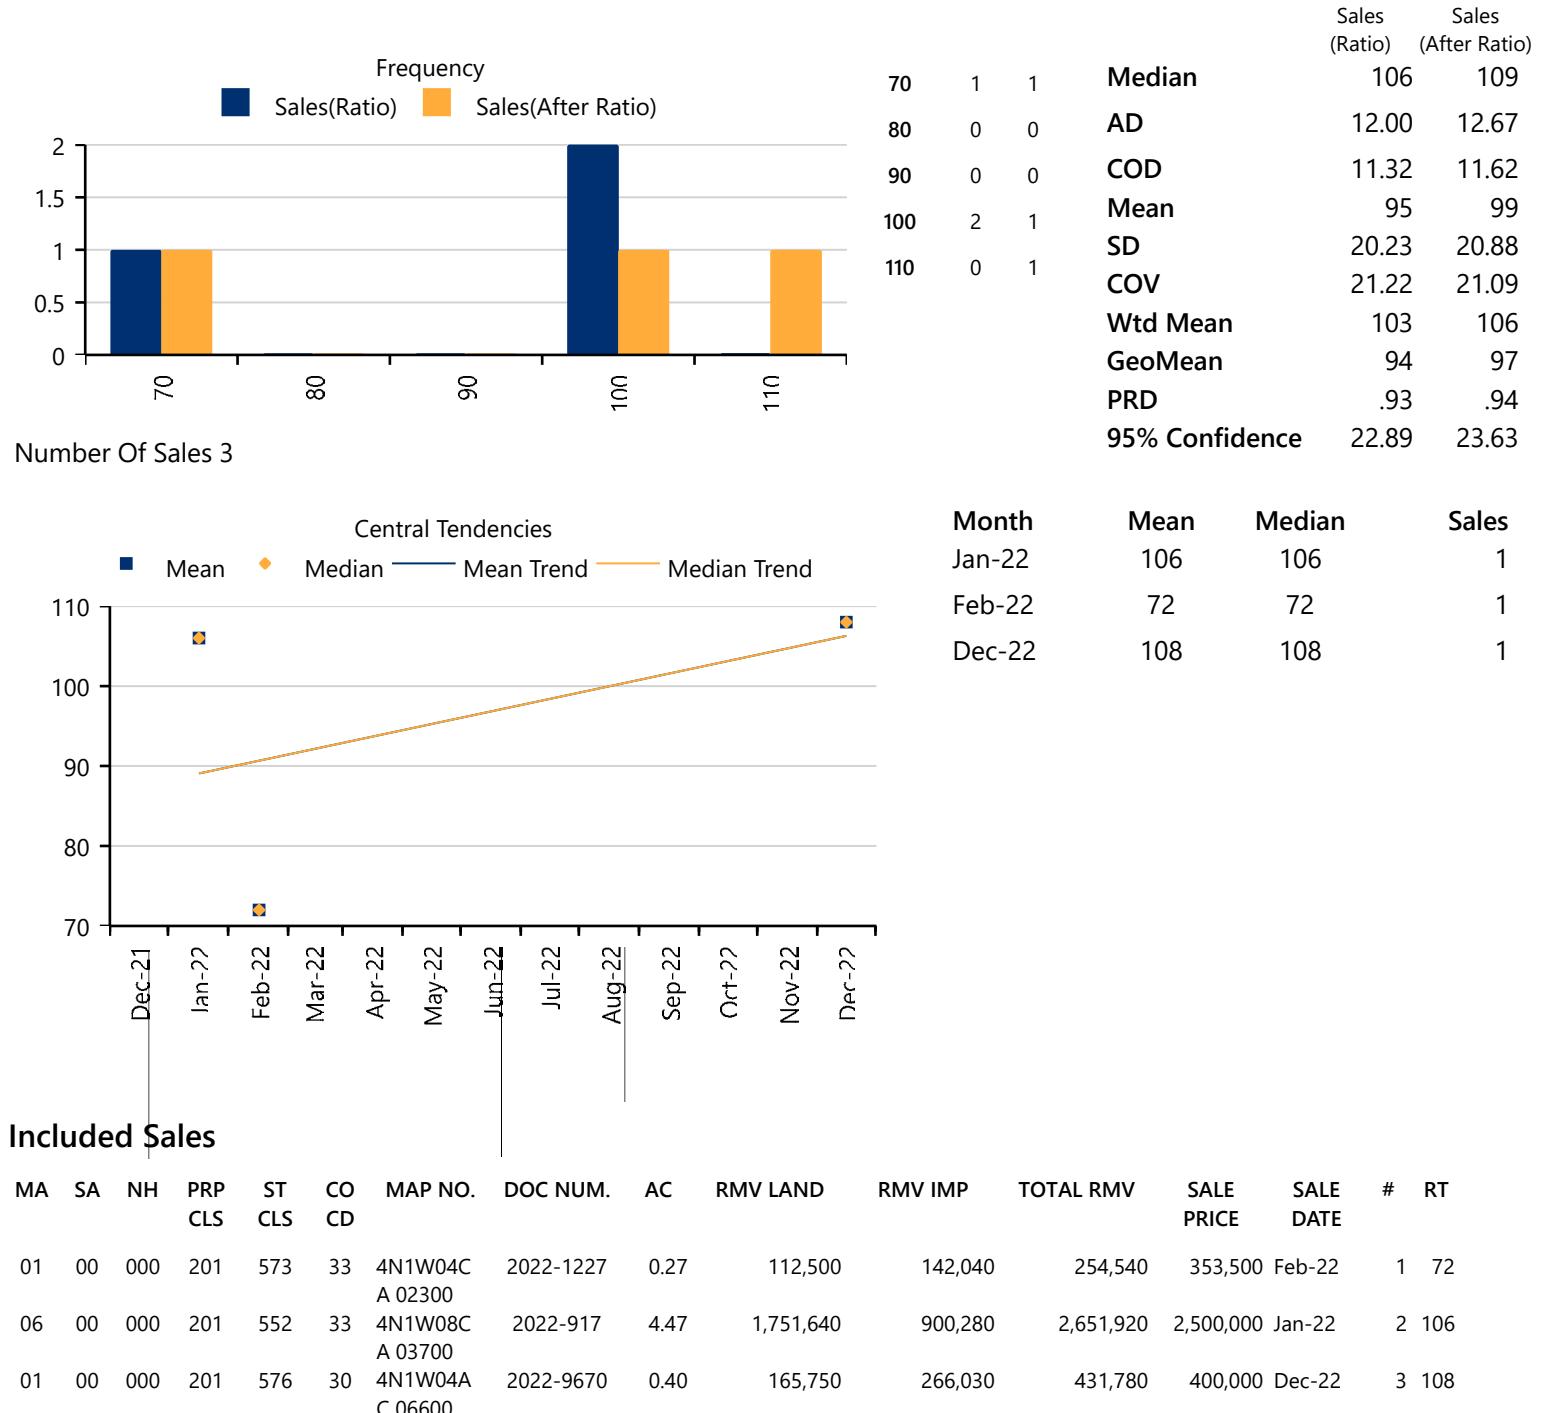

The sales array returned 3 sales for this analysis which represent 0.48% of the population, a sample too small to provide adequate market indicators for improved commercial property located in South County. Because the dataset is insufficient, no adjustment was applied to the land. For the improvements, an adjustment of 108 was applied. This adjustment was determined by conducting a comprehensive analysis between the 2015 Marshall and Swift book (current book used during reappraisal) and the 2023 Marshall and Swift book and was deemed reliable and sound.

Unimproved land – Commercial, North County (Vernonia, Rainier and Clatskanie)

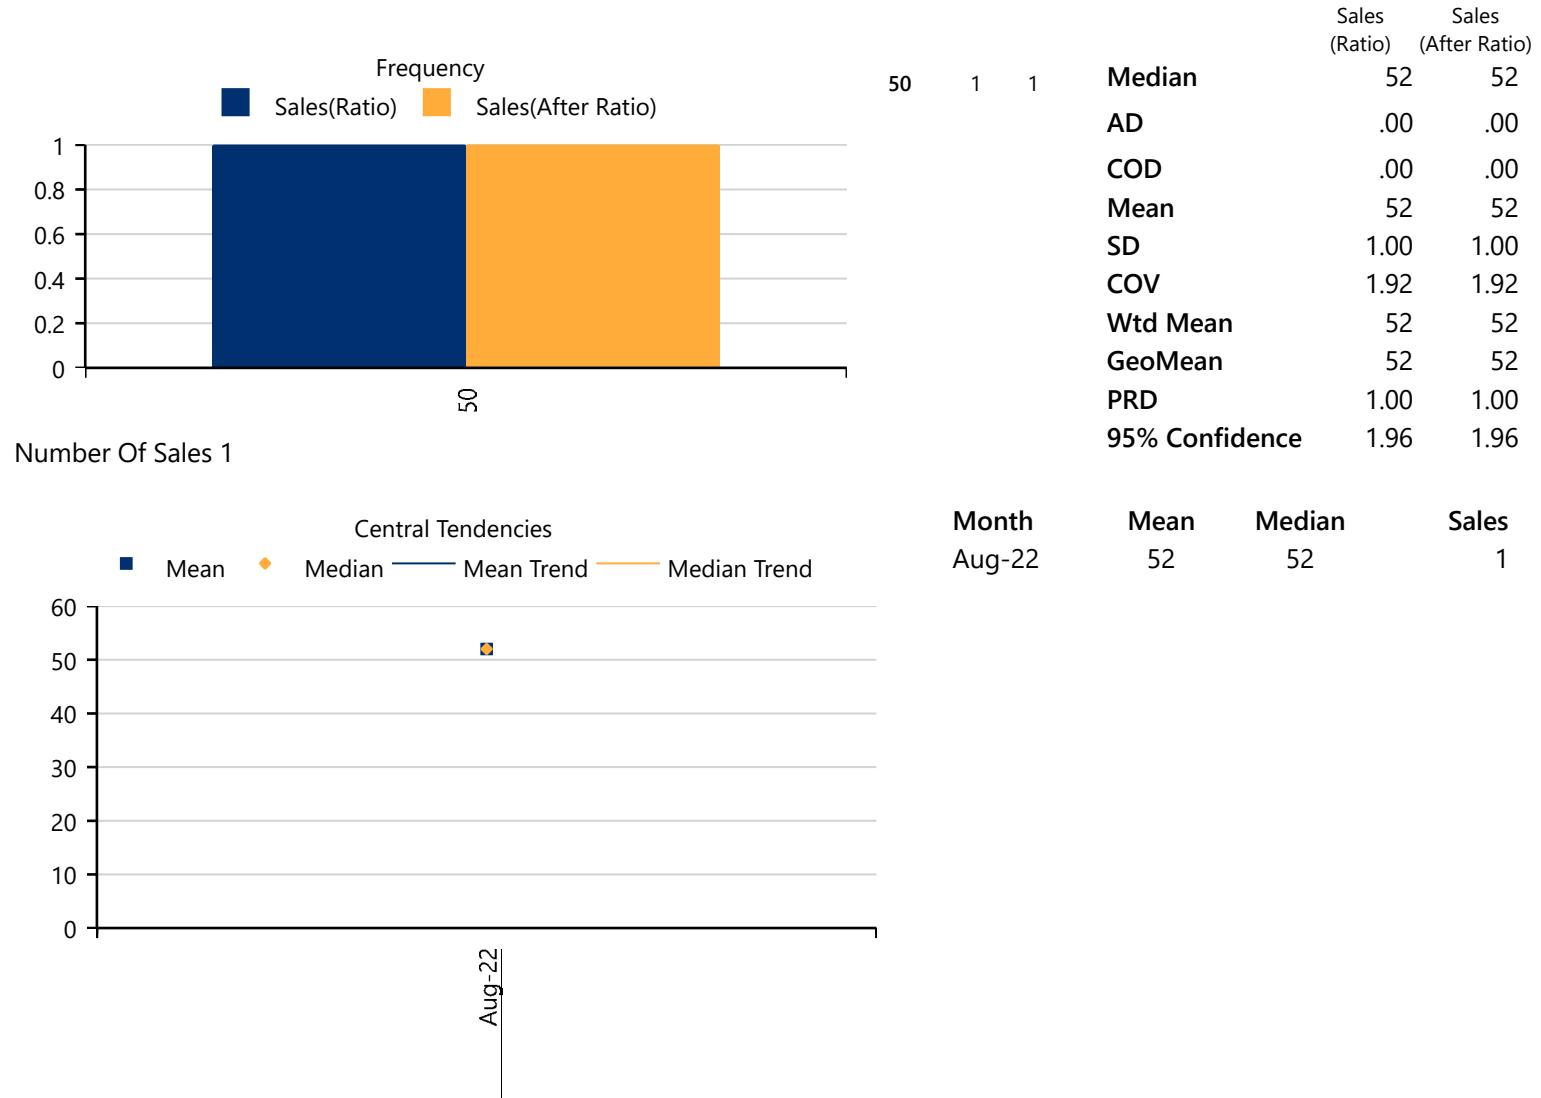

A single sale was returned for this commercial vacant land population of 259 accounts located in North County. Because of the lack of sales data, it was decided to apply no adjustment, leaving the Selected Ratio at 100.

Explanation

RMV Class 201: MA 03, MA 04 and MA 05; Study Area 00

Improved land – Commercial, North County (Vernonia, Rainier and Clatskanie)

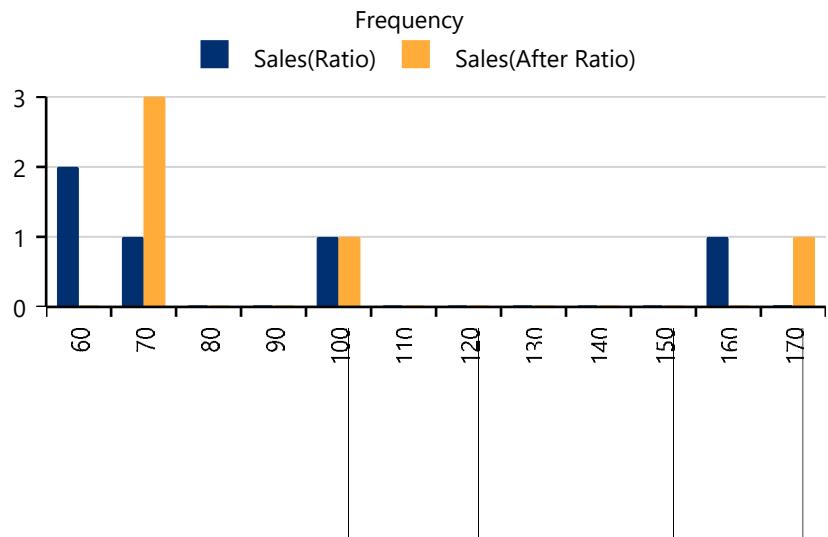

Although 5 sales were found for this analysis of improved commercial property in the North County area, the ratios were found to be too dissimilar to indicate true market indicators for this property classification. Therefore, the land trend factor will remain at 100 but the improvements will be adjusted by 108 which is the trend factor conclusion from the analysis between the 2015 Marshall and Swift book (current book used during reappraisal) and the 2023 Marshall and Swift book.

Unimproved land – Commercial, South County (St. Helens, Warren and Scappoose)

Improved land – Commercial, South County (St. Helens, Warren and Scappoose)

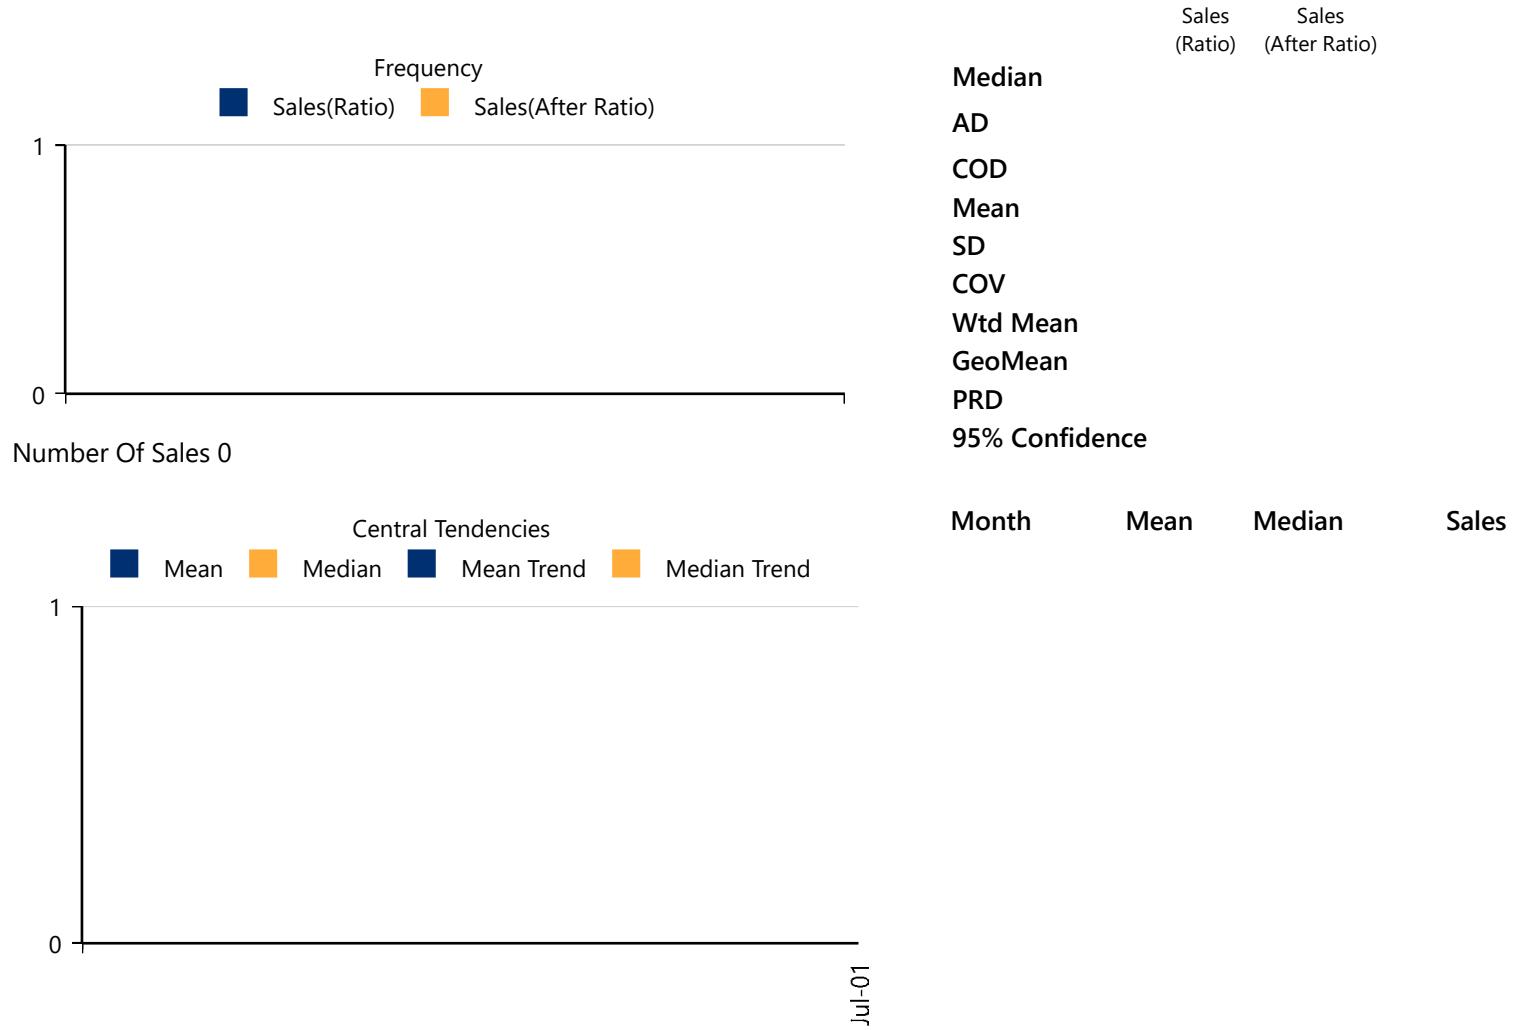

This area is comprised of commercial properties located in an industrial zone within the commercial corridor. The sample returned no sales data to analyze. Therefore, it was deemed appropriate to apply the conclusion of 108 to the improvement from the Marshall and Swift analysis and to apply no adjustment to the land.

Unimproved land – Industrial

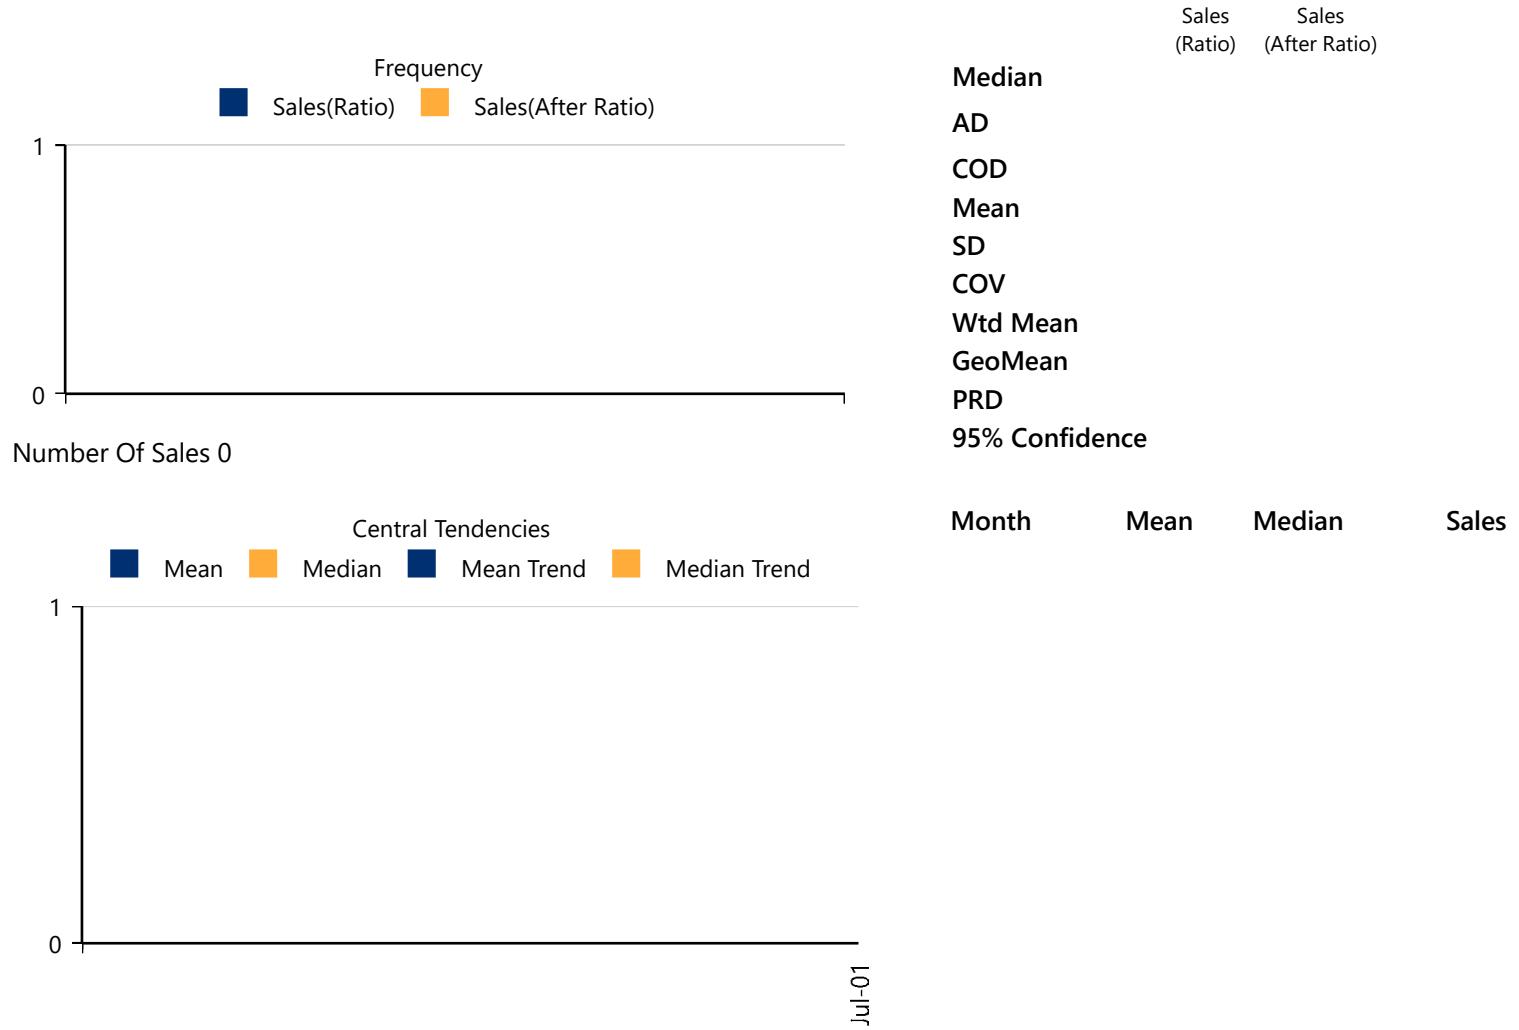

For this study of industrial zoned properties outside the commercial corridor, no useable sales data was returned. Thus, the decision was made to apply the trend factor of 109 to the improvements only. This factor was established from the study between the 2016 Marshall and Swift book (last reappraisal book used) and the 2023 Marshall and Swift book. The land adjustment will remain 100.

Unimproved and Improved land – Industrial, Scappoose Industrial Air Park

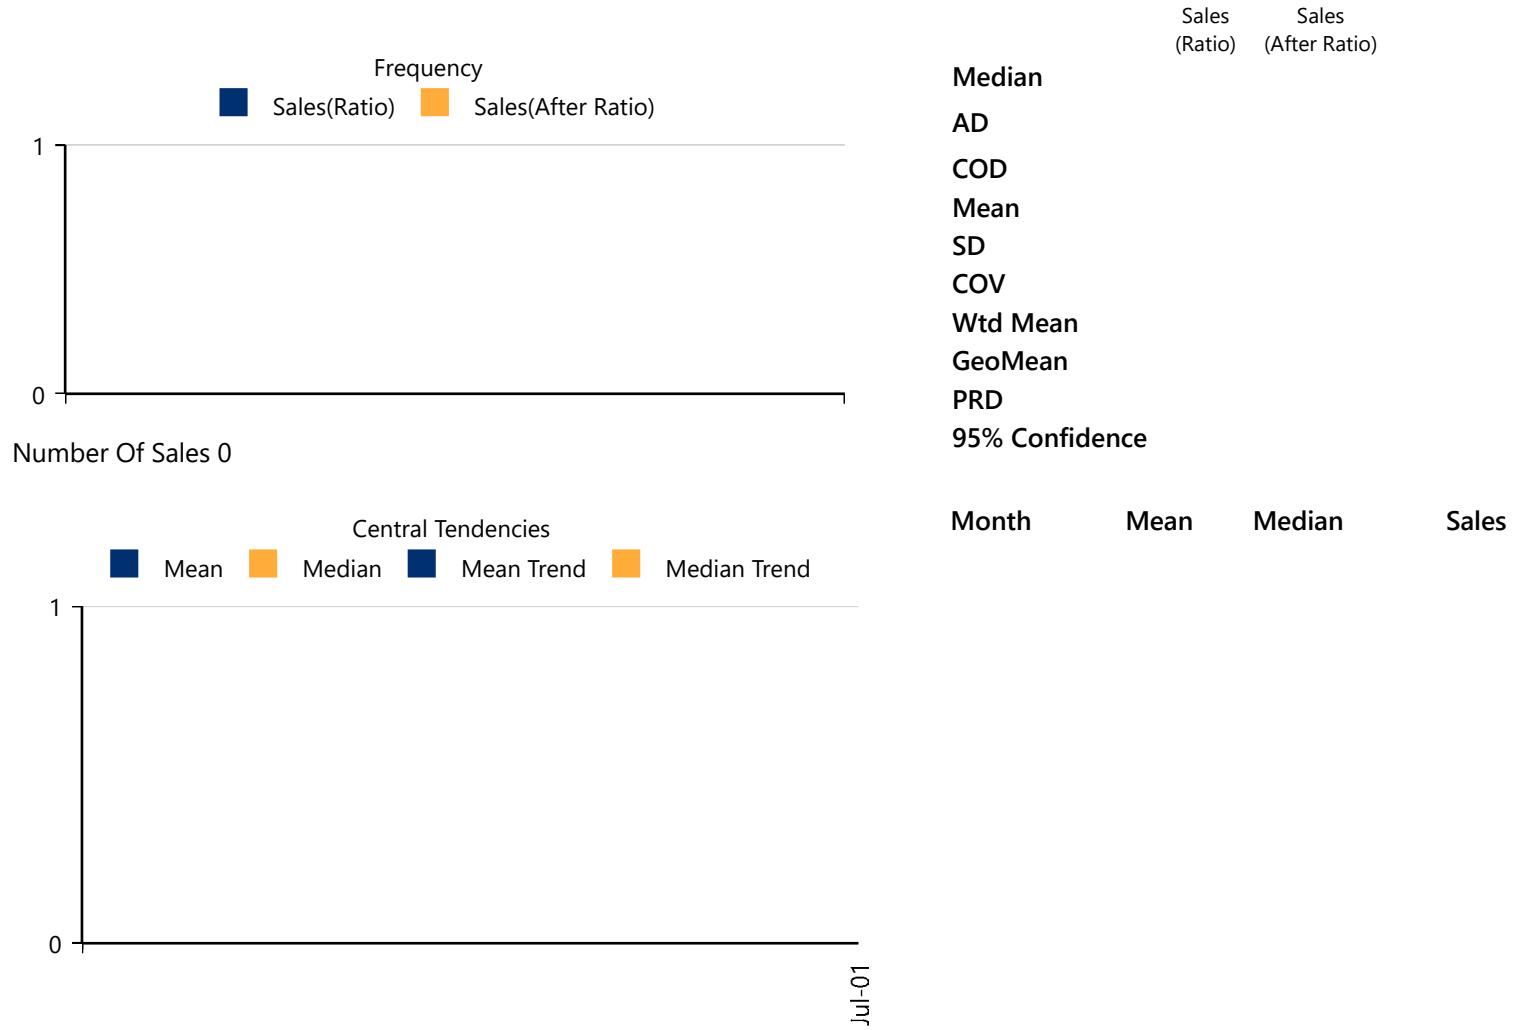

Currently, no sales data was found for this grouping of 35 properties located at the Scappoose Air Park (Scappoose Airport) where the zoning is light industrial use. The demand for this property classification has increased over recent years and it is anticipated that development of additional aviation and manufacturing businesses will occur in the future. Therefore, an adjustment of 109 from the 2023 Marshall and Swift analysis will be applied to the improvements and land will trend at 100.

Explanation

H&BU Forestland – Countywide
 RMV Class 600: SA 06
 RMV Class 601: SA 06
 Highest & Best Use Forestland

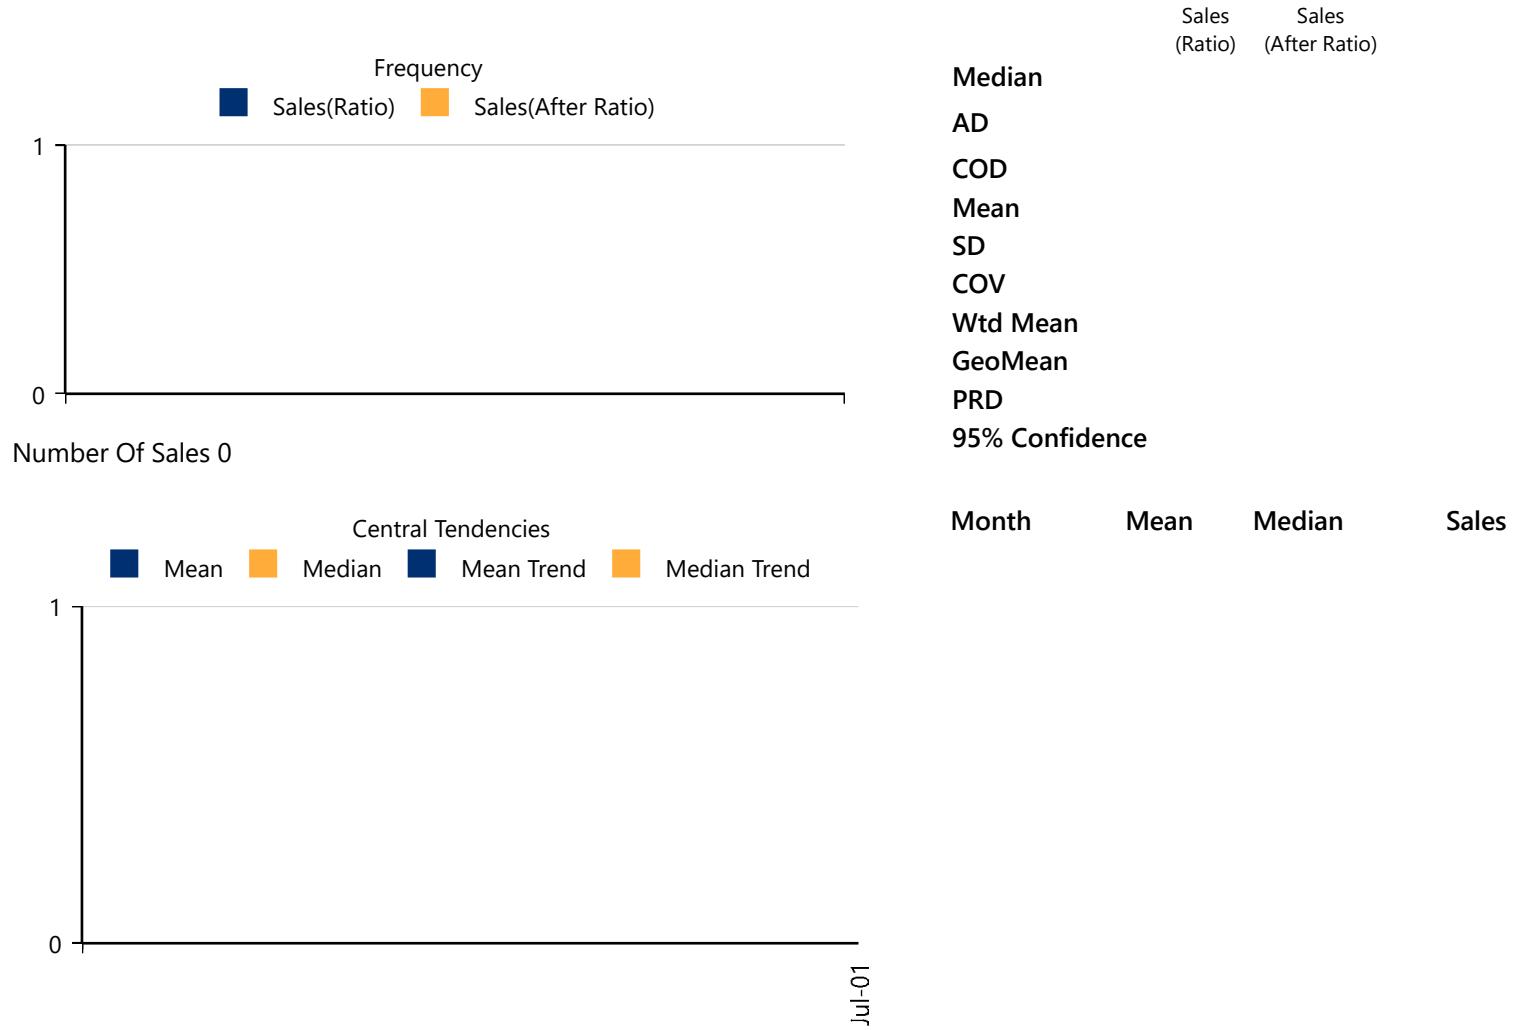

This grouping of Highest and Best Use Forest Land properties are large tracts of land having topographical issues and access limitations which hinder the use of the property. This past year a review of all Highest and Best Use accounts was completed. It was found that many of the accounts were under Designated Forestland special assessment and were "moved" to the appropriate property classification. As a result of this examination, the population count for Highest and Best Use Forestland has changed. The Real Market Values applied each assessment year to H&BU properties are determined by the Department of Revenue. Therefore, no adjustment was applied to this grouping of 79 accounts.

Explanation

Multi-Family – Countywide

RMV Class 701

Improved land – H & B Use Multi-Family (Apartments), Countywide

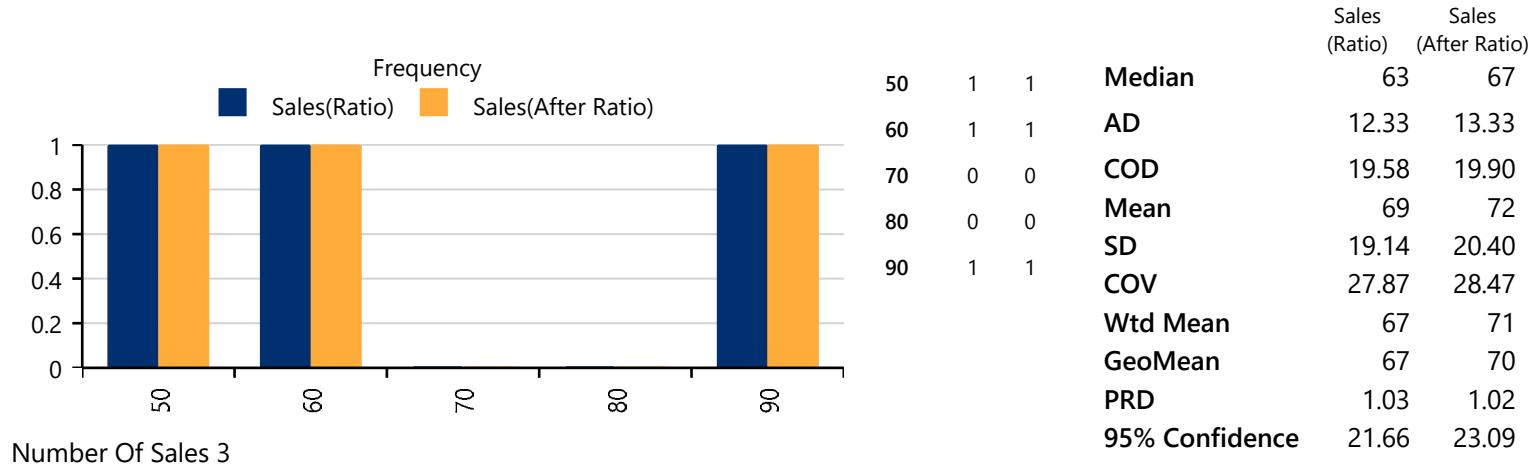

This study consists of Multi-Family units (apartments) located throughout Columbia County. Three sales were found for this study however one sale is an older home that has been converted to 5 units (10907), another is a single story 6-unit complex (10907) and the third (22084) is a multi-story (22 unit) building. All structures represent various degrees of construction type and condition and are too dissimilar to use as adequate indicators for current market trends. Therefore, it was decided to apply a trend factor of 100 to the land and a trend factor of 108 to the improvements which was determined from the comprehensive analysis between the 2015 Marshall and Swift book (current book used during reappraisal year) and the 2023 Marshall and Swift book.

Explanation

Islands – Countywide
 RMV Class 400 and 800, SA 60
 Islands located Countywide

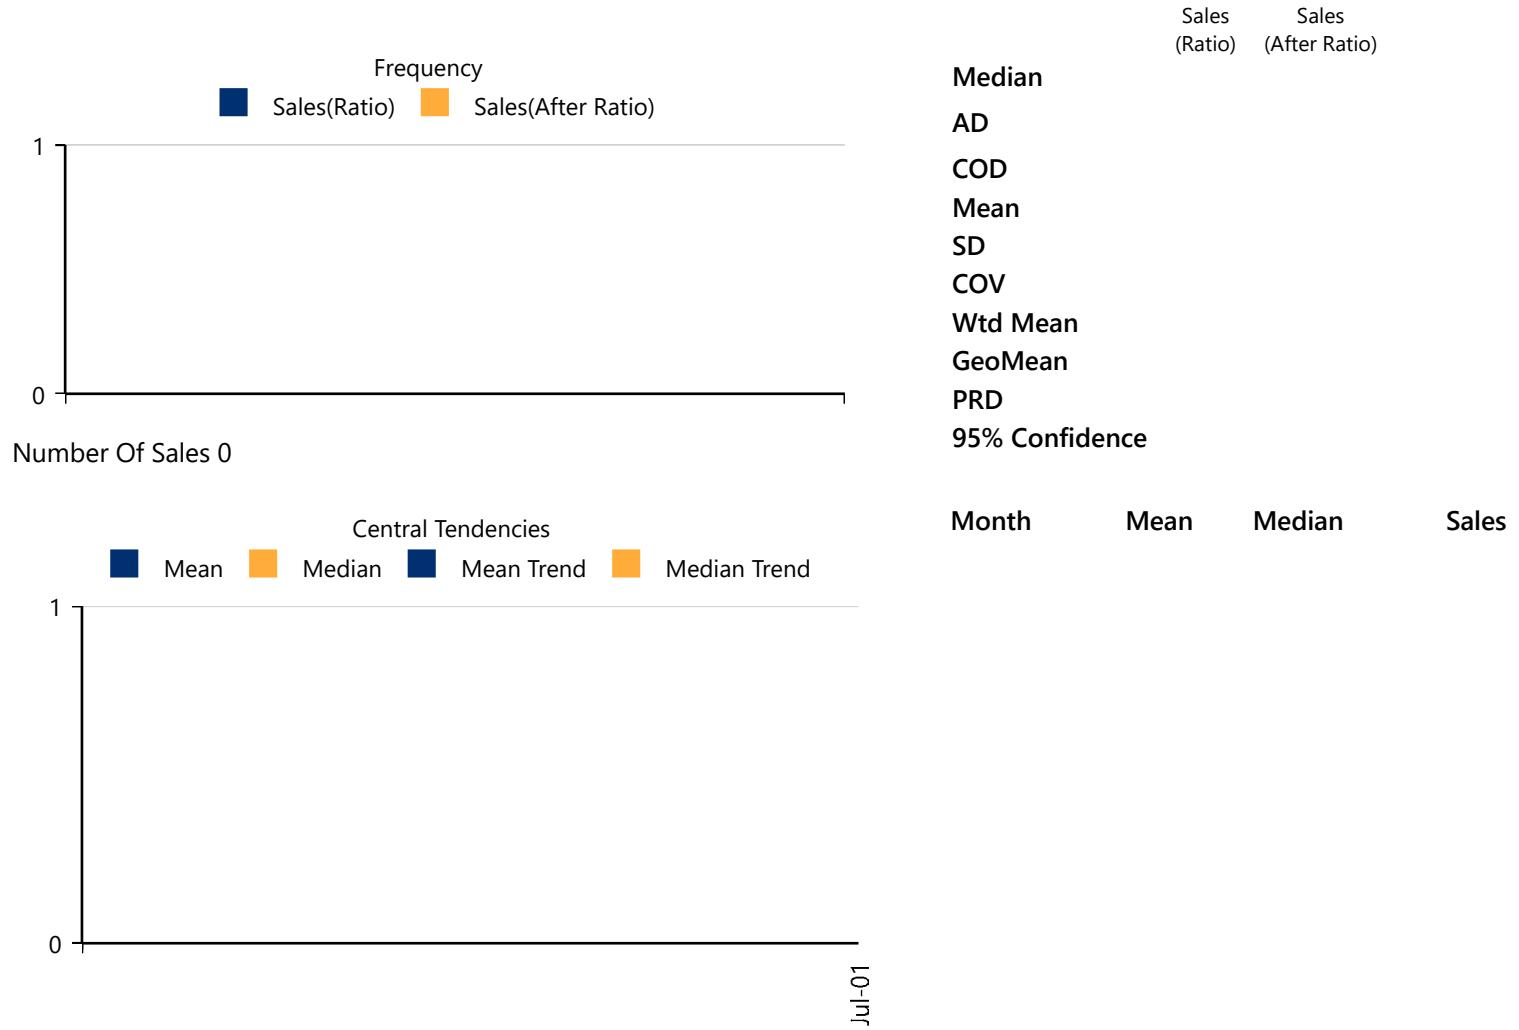

There are several islands located on the Columbia River throughout Columbia County. There is very little marketability due to access and development limitations. Many of these properties are owned by non-assessable agencies and they have very little marketability due to access and development limitations. Therefore, it is recommended that no adjustment be applied to this classification of property.

701	All	00	Multi-Fam	Countywide	98	19.90	-	0.00	16.55	0.00	No

Explanation for areas out of COD range

RMV Class 019 located in MA 07 SA 01, 02, 06 (South County) and MA 07 SA 03, 04, 05 (North County) – A study will be conducted on personal property manufactured structures that are located in the general areas of South and North county. The purpose of the study will be to assess if an adjustment is warranted based on market data.

MA 01, SA 30, RMV Class 101 – Priced high, this classification of duplex, tri-plex and four-plex properties continues to be highly sought after by investors wanting to secure financial investments. As the market continues to see shortages, it is anticipated this RMV class will continue to be in short supply and the demand for income generating assets will continue to rise.

MA 03 SA 03, RMV Class 101 – This population of 13 accounts is of city residential improved property located in the Fema Floodway. The COD indicated is just slightly over the maximum allowed for non-homogenous property. Based on history and knowledge of the market, it is anticipated that next year this classification will fall within COD range as supply diminishes and the market levels.

MA 03 SA 31, RMV Class 400 – This area of unimproved land has seen a steady COD decline over the years. As the market levels and interest rates rise, this property classification is projected to see a slowing in demand for developable land in rural Vernonia.

RMV 201 and RMV 701 – For the next year, commercial and multi-family (apartments) properties will be reappraised by property type to take valuations from the 2015 Marshall and Swift book to the 2024 Marshall and Swift book.

Price Related Differential

Following are the Price Related Differential (PRD) ratings categorized by Maintenance Area, Study Area and RMV Class. The PRD illustrates whether valuations are reasonably equal between high and low properties

If the PRD is over 1.03, then the PRD is regressive. This means the low-value properties are overvalued and high-value properties are undervalued. (Valuations are higher than their sale price).

When the PRD is below .98, then the properties are considered progressive. This means the high-value properties are overvalued and the low-value properties are undervalued. (Valuations are lower than their sale price).

This data is from the sales file date January 1, 2022 through December 31, 2022 and has been used in the 2023 Ratio Report.

RMV Class	MA	SA	PRD	Under .98	Over 1.03	Sales used in Ratio Study?
019	07	30	1.04		X	Yes
100	05	00	0.93	X		Yes
201	01, 02, 06	00	0.94	X		No
400	03	31	1.07		X	No
400	06	61 and 67	0.96	X		Yes
409	04	41 and 44	1.04		X	Yes

APPENDIX A

For 2023, a County wide setup study was not performed. Instead, the prior year 2022 Recalculation and Setup Study conclusions were applied. A new County wide setup study will be performed in 2024.

Instead, it was decided to perform a comprehensive study and market analysis on three manufactured structures parks: Crestwood Village (SA 27), Columbia City Estates (28), and Springlake Park (SA 30).

These parks are highly sought after, offering many amenities such as: gated communities, private lakes, walking paths, mountain views, proximity to shopping, restaurant, entertainment, medical facilities/hospitals, and transportation. In addition, these parks provide a subdivision "feel, security, uniformity, tenant owned interest in the park, community living and facilities. Over the past few years, the overall market perception has indicated that these unique features make the homes in these parks superior to common place personal property manufactured homes located elsewhere.

Therefore, based on the sales data and market perception of the personal property manufactured homes, the following adjustments were developed and implemented for this 2023 Ratio Year:

Park	Adjustment
SA 27 Crestwood Village	0.85
SA 28 Columbia City Estates	0.35
SA 30 Springlake	
Phase 1	0.79
Phase 2	0.69

2022 Recalculation and Reappraisal Setup for all Residential Properties in Columbia County

Introduction

To ensure statewide uniformity in administering Oregon's Property Tax Laws, the Oregon Department of Revenue (DOR) exercises its supervisory authority over the property tax system under Oregon Revised Statute (ORS) 306.115. In addition, under ORS 306.120, the DOR must develop and provide manuals and instruction to all county assessors to ensure uniform methods of assessments. Please refer to the following publications developed by the DOR as a guide when performing an Annual Setup:

- Appraisal Methods manual
- Cost Factors for Residential Buildings
- Cost Factors for Manufactured Structures
- Cost Factors for Farm Buildings

[Columbia County Assessor's Annual Setup](#)

A successful mass appraisal of residential properties in a selected area is dependent on a comprehensive analysis of recent sales to determine land values, local cost modifiers to apply to the cost factors, to develop local market-based depreciation schedules based on age and condition of structures, and to establish benchmarks or miscellaneous adjustments. This method of analysis is referred to as a "Setup Study". Following mass appraisal principles, this document contains the annual setup study conclusions for:

- | | |
|--|--|
| <ul style="list-style-type: none"> • Time Study • Land value (per acre or square foot) • On-Site Development cost | <ul style="list-style-type: none"> • Local Cost Modifier • Depreciation Schedules • Miscellaneous adjustments |
|--|--|

For this 2022 Setup year, the Base Appraisal date of January 1, 2021 has been established. Note: the supporting documentation used for setup is not included in this publication. However, is available by public records request.

[Definitions and Descriptors:](#)

- Market Analysis – The study of the supply and demand in a specific area for a specific type of property. (Appraisal Institute, *The Dictionary of Real Estate Appraisal*, 6th ed. [Chicago: Appraisal Institute, 2015])
- Market Area – an area where comparable properties are found for a particular classification of property.
- MA – Maintenance Area. The County is divided into separate areas for appraisal maintenance purposes. These may or may not be market areas.
- SA - Study Area. Properties, usually within specified boundaries, that share similar market attributes and influence.
- LUC - Land Use Code. The type of land value schedule used for assessment:

- 001 Residential City Under an Acre – Square Feet
- 002 Residential City Acreage – Acres
- 003 Residential Rural Tract - Acres
- 005 Residential Riverfront – Front Footage

2022 Time Study Conclusion

The Ratio Analysis Method is considered to be the most reflective indicator of time change for the data available. The change rates below will be used to adjust sales data to the base appraisal date.

Time Trend Rate for 2020 Sales to Reflect Base Appraisal Date of January 1, 2021				
City	Area	No. of Sales	Annual Trend	Per Month Trend
St. Helens	MA 1	285	0.0753	0.0063
Scappoose	MA 2	186	0.0753	0.0063

2022 Land Conclusions

MA 1 City of St. Helens

- SA 00 Residential
- SA 30 Duplex, Triplex, Fourplex
- SA 43 Rowhouse, Townhouse

The following graph displays sales within the general market area in the City of St. Helens. The sales reflect the price per square foot and were used to generate the vacant land schedule. Also, due to the limited number of sales available, it was decided that the land schedule for SA 00 will also be applied to SA 30 and SA 43.

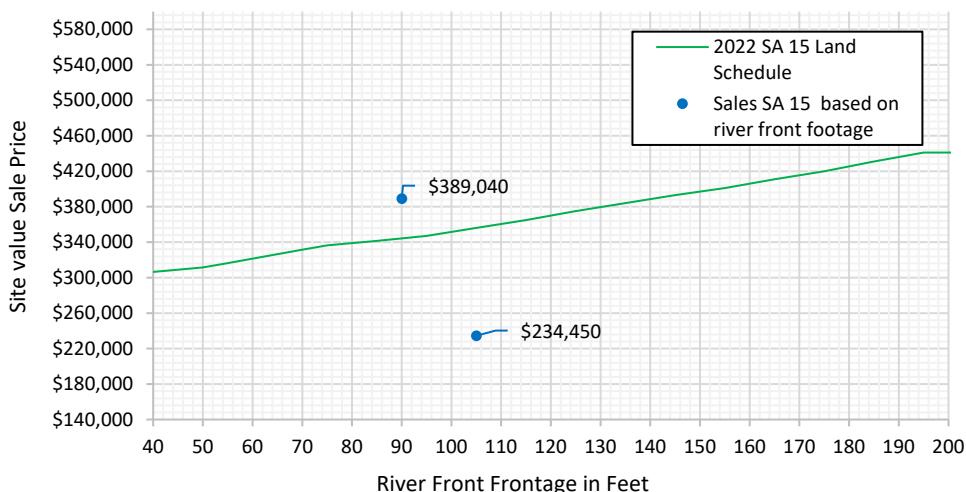

2022 Land Conclusions continued

MA 1 City of St. Helens and MA 6 City of Columbia City

SA 15 Riverfront

The following graph displays sales within the Riverfront market area. These sales reflect the site value based on the lineal foot of river frontage, which influenced the creation of the vacant land schedule for MA 1 SA 15 and MA6 SA 15.

2022 MA 1 and MA 6 SA 15 Land Study

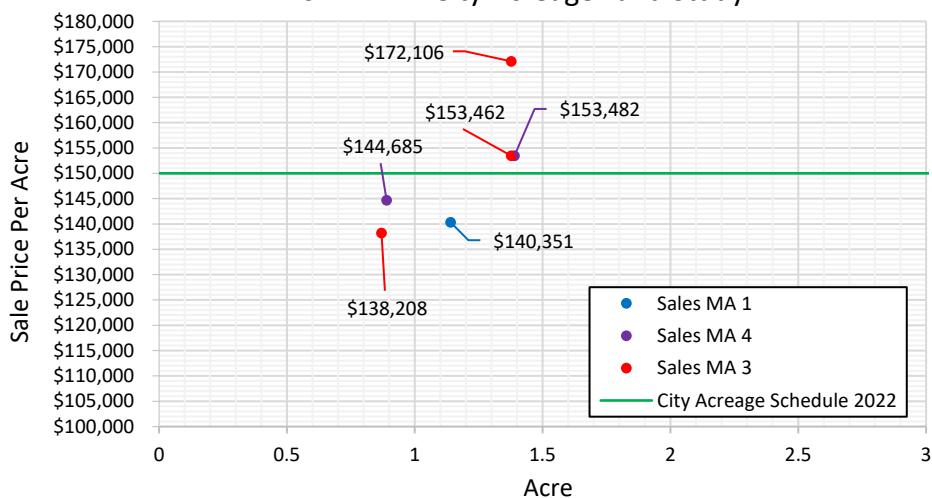

MA 1 City of St. Helens

SA 00 City Acreage

The sales illustrated below reflect a per acre rate for undeveloped city acreage properties within the market area. These sales influenced the creation of a new city acreage schedule for MA 1 SA 00 for 2022.

SA 51 Rural Value Zone 1

For 2022, the graph below shows vacant land sales which support the development of a new vacant land schedule for Rural Value Zone 1 (SA 51) located in Clatskanie.

MA 5 Rural Clatskanie

SA 55 Dike Land

For 2022, the sales plotted on the following graph show the sales price per acre for Dike Land (SA 55). Due to the lack of sales available for this analysis, a further review of supporting and similar neighboring market areas such as MA 4 SA 45 sales were reviewed. The final analysis determined that SA 55, when combined with MA 4 SA 45 sales, fell in line with the MA 4 SA 45 trended land schedule. Therefore, MA 5 SA 55 will follow the following new vacant land schedule.

2022 On Site Development (OSD) Conclusions

The cost figures below are estimates associated with the development of a residential structure within the County. The categories listed below are market related costs and/or system development charges (SDC) required by the owner, or developer, for site development of a new structure.

- Excavation costs include; clearing, driveway, excavation, backfill, grading, & utility trenching. The site development cost is based on an overall typical site size: 5-10k square foot lot for properties within the city limits and a site size of less than an acre for rural properties.
- Power costs are provided by the local governing utility companies. These cost estimates are based on a flat rate fee schedule.
- For city properties, all the necessary SDC fees associated with water, sewer, parks, streets, and storms are only charged at initial development of a site.
- Water is generally provided by drilled domestic water wells on each rural property at an average well depth per local drillers.
- For rural properties, sanitation is generally provided by a private onsite standard septic system. It's known that other alternative septic systems are utilized throughout the county, but the standard septic system is reported to be the typical system as shown below. Columbia County Land Development Services imposes transportation & parks SDC fees, that are charged at initial development of the site.
- Multifamily properties, if available, have the choice to have each unit metered independently for water and sewer for billing purposes. It should be noted that contractors indicated no real increase in excavation costs for the typical up to 4-unit multi-family. These cost figures have been acquired and refreshed annually to keep up with market related development costs of residential.

2022 Local Cost Modifiers (LCM) Conclusions

This study establishes a modifier to be applied to the construction costs found in the Department of Revenue's Cost Factor books for conventional stick-built dwellings, floating properties, manufactured structures, and farm buildings. The cost factors in these manuals reflect the Portland-Metro area; the LCM adjusts these factors to the Columbia County area and to the established base appraisal date.

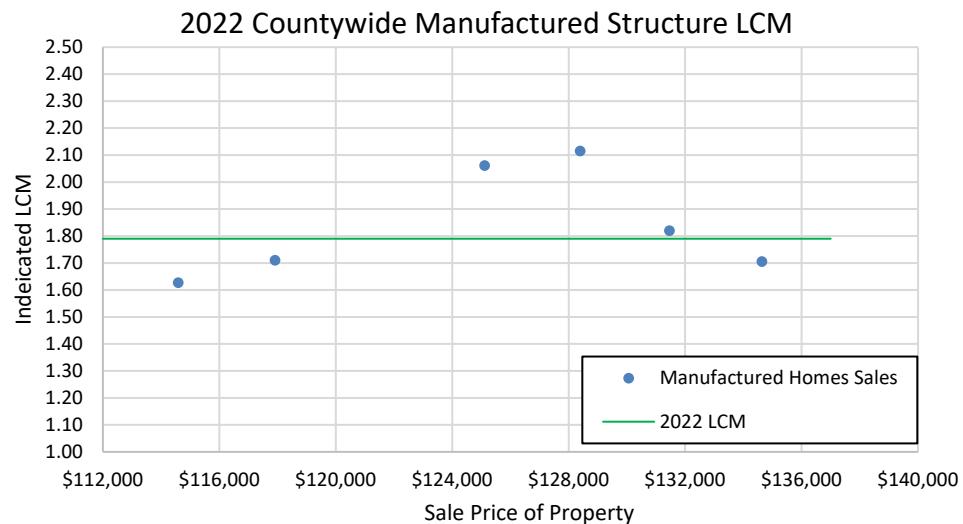

Conventional Built Dwellings LCM - Countywide

For 2022, a local cost modifier of 1.62 was applied to the cost factors for conventionally built dwellings.

Manufactured Structures LCM - Countywide

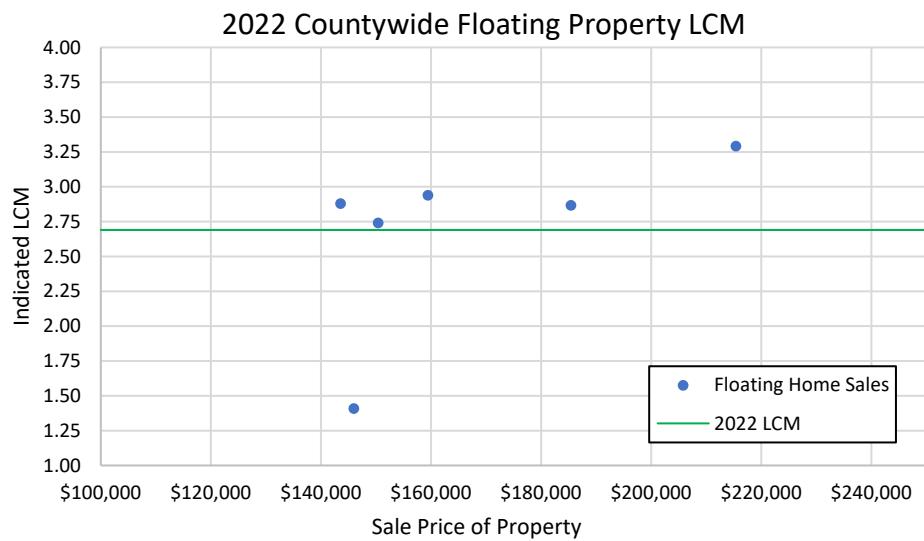

For 2022, the LCM of 1.79 was established for Manufactured Structures and was applied accordingly.

2022 Local Cost Modifiers (LCM) Conclusions continued

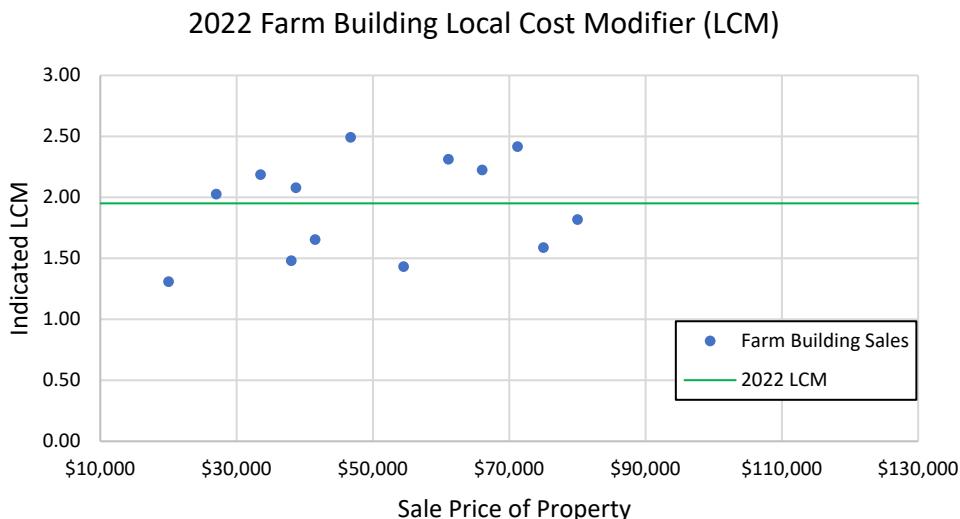

Floating Property LCM - Countywide

The data collected indicates a 2.69 floating property LCM for 2022.

Farm Building LCM - Countywide

For 2022, 1.95 LCM will be applied to the DOR cost factors for farm buildings.

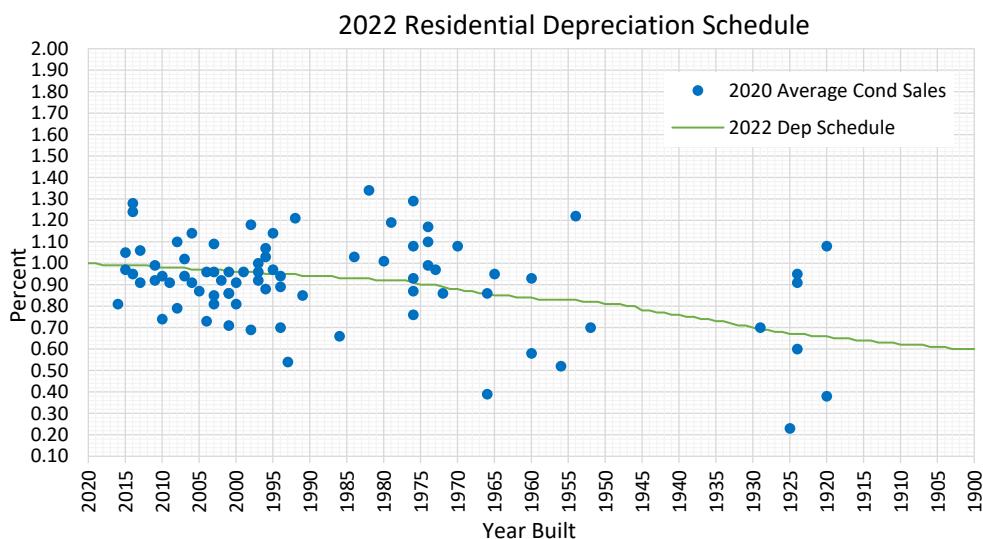

2022 Depreciation Schedule Conclusions

The purpose of the multi-family depreciation study is to determine the accrued depreciation of an improvement. Accrued depreciation is the difference between the replacement cost new and the present value of an improvement.

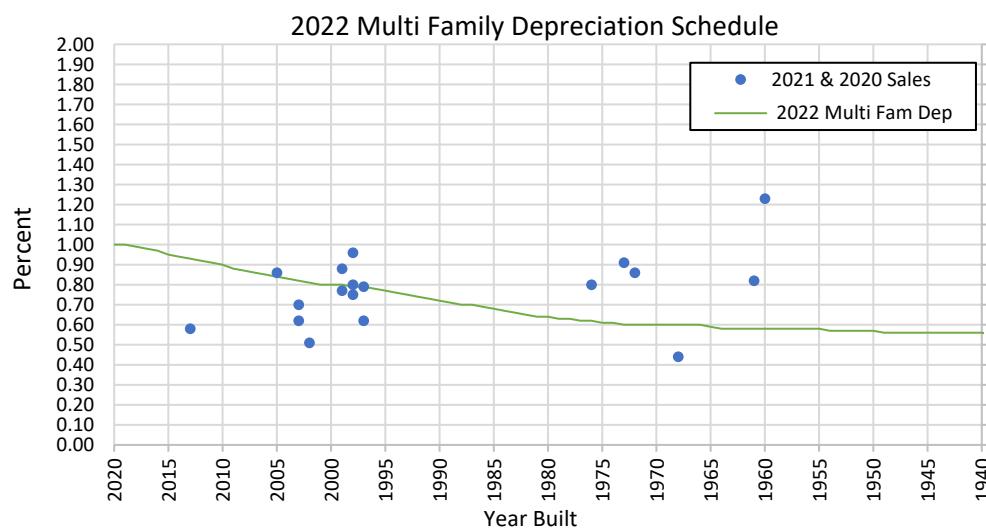

Single-Family Dwellings Depreciation - Countywide

The data collected and analyzed for the depreciation study of conventional single-family dwellings shows an increase from the prior year depreciation schedule. The data was plotted on the following graph and supports the residential depreciation schedule for this year's base setup.

Multi-Family Dwellings Depreciation - Countywide

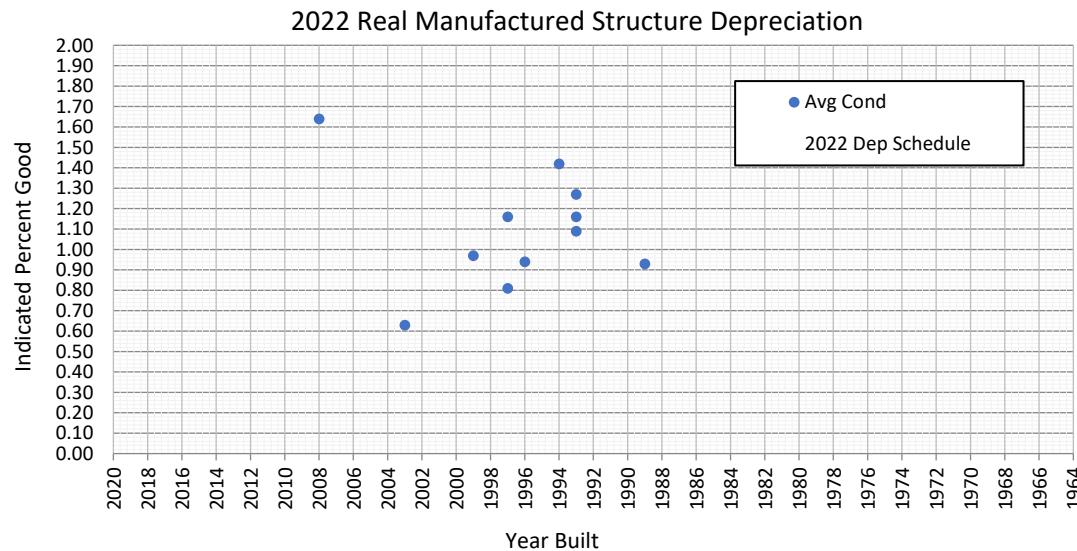

Following is the graph of sales studied to establish the depreciation schedule for multi-family dwellings.

2022 Depreciation Schedule Conclusions continued

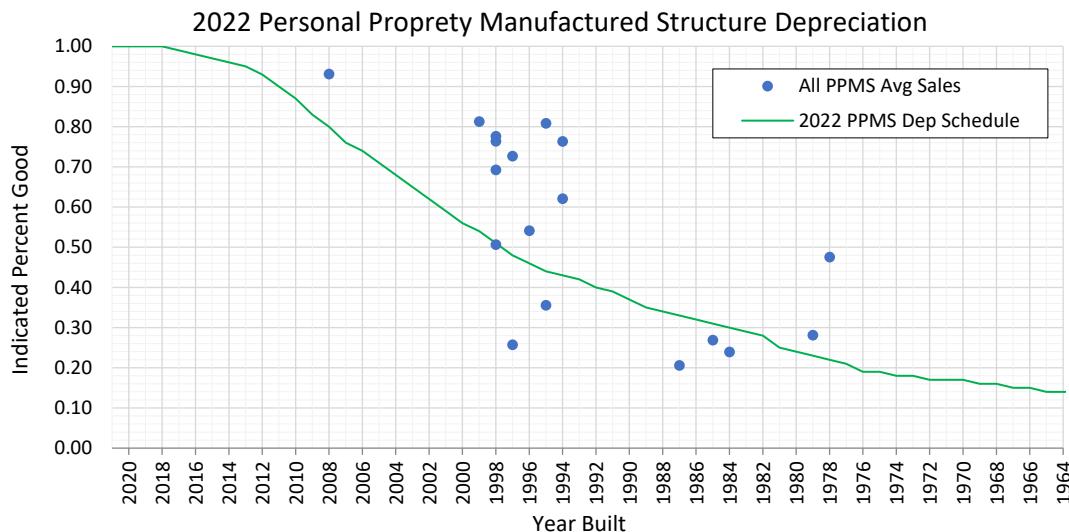

Real Property Manufactured Structures Depreciation - Countywide

Real property manufactured structure sales data was collected, analyzed and a percent good was determined for each sale. Once the percent indicators were determined, they were applied to the following chart and compared to the prior year's depreciation line to see if a change was warranted. The data indicates an increase, therefore a new depreciation schedule for real property manufactured structures was created for this setup year.

Personal Property Manufactured Structures Depreciation - Countywide

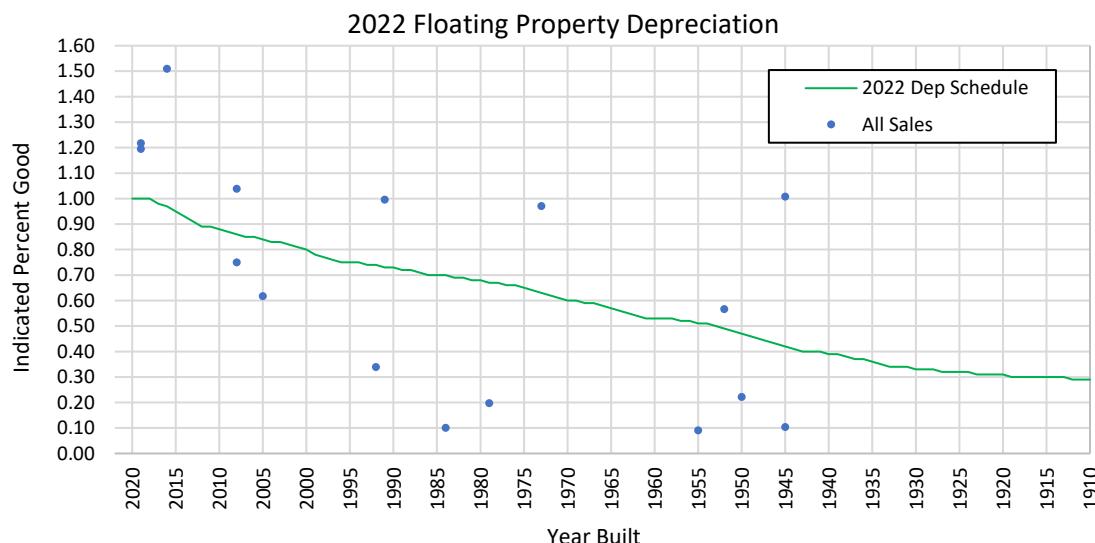

Based on the following chart illustrating the sales data collected, a new depreciation schedule was deemed appropriate for personal property manufactured structures for this setup year.

2022 Depreciation Schedule Conclusions continued

Floating Property Depreciation - Countywide

The data collected and analyzed for developing a depreciation study revealed that newly constructed floating properties held their value while the majority of other aged structures showed a decline. Therefore, for this setup year, a new depreciation schedule was created.

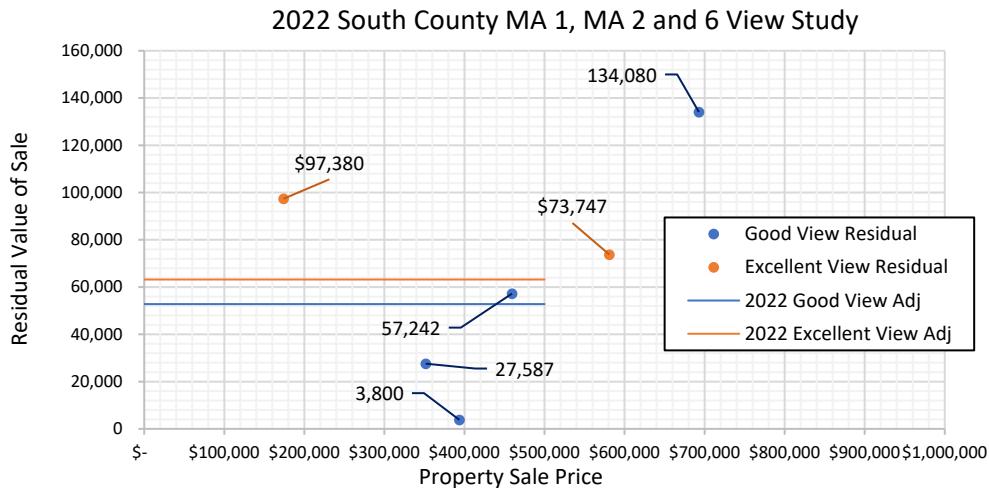

Farm Buildings Depreciation – Countywide

It is not feasible to use an extraction method to determine a market-based depreciation schedule for farm buildings. In most cases, these structures represent a minimal portion of the overall real market value of a property. Farm buildings are depreciated using a straight-line depreciation method and appraiser judgment is used in determining the effective age of the structure.

2022 Land and Miscellaneous Adjustment Conclusions

View Adjustment - South County MA 1, MA 2, and MA 6

The sales with views on the following graph are located in the market area of South County (St. Helens, Scappoose, and Warren). The process of extraction was applied and the value plotted on the graph is of good and excellent views.

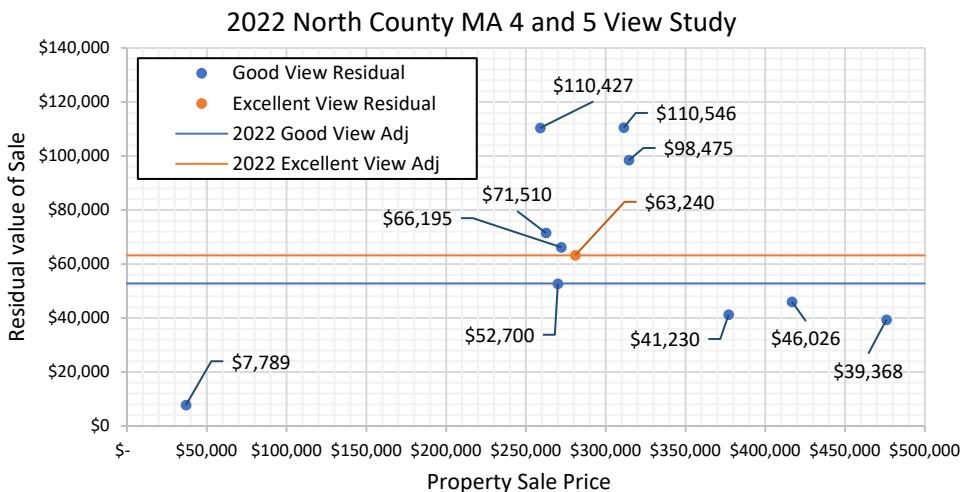

The following indicated adjustments will be applied to view properties located in South County:

Good View	\$55,700
Excellent View	\$85,600

View Adjustment - North County: MA 4 and MA 5

The following graph displays sales within the North County market areas of Rainier and Clatskanie which contain a view. The sales on the graph reflect an extracted value for either good or excellent views.

Based upon the data collected for North County, the following view adjustments will be implemented:

Good View	\$52,800
Excellent View	\$63,200

2022 Land and Miscellaneous Adjustment Conclusions continued

Premium Location Adjustment – Countywide

Due to time constraints, the current premium adjustment value of “0” will be maintained for the 2022 set up.

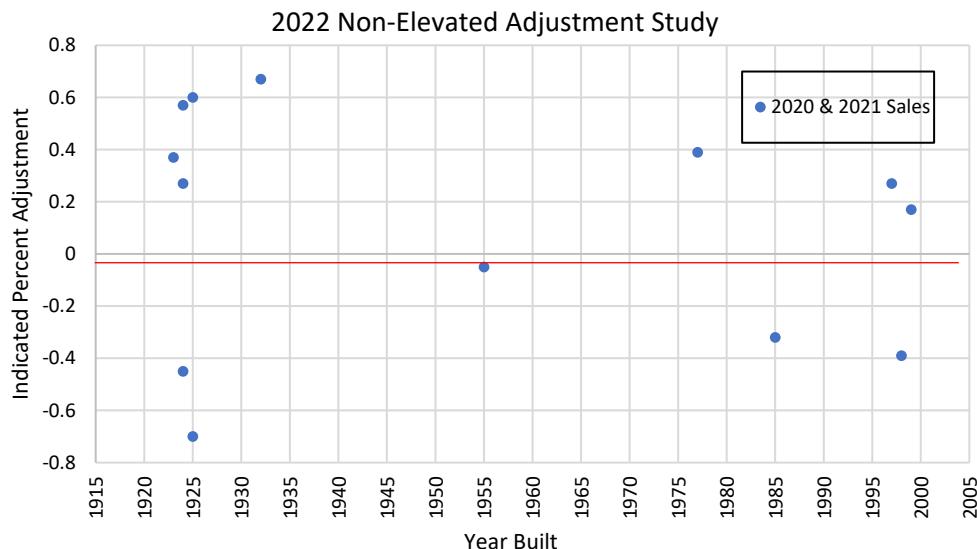

Topography Adjustment – Countywide

Consistent sales data was not found that would indicate credible market driven indicators to analyze for topography adjustments. This may be primarily based on buyers’ personal preferences as well as their own intended use. Due to the lack of data to determine market driven adjustments, topography adjustments are made as judgement calls, on a case by case basis with the following adjustments listed below.

Code	Description	Rate %
411	Topo- Minimal impact	-10%
412	Topo- Low Impact	-20%
413	Topo- Moderate Impact	-30%
415	Topo- Severe Impact	-40%

Non-Elevated Home in Floodplain Adjustment -City of Vernonia SA 03

The following graph displays sales within the floodplain of the Vernonia market area. The indicated market perception of the cost to cure a non-elevated home was inconclusive and therefore the adjustment for this setup year will be “0”.

2022 Land and Miscellaneous Adjustment Conclusions continued

Slide Area Adjustment - City of Rainier

The slide area in Rainier is east of Fox Creek and South of Columbia River Highway. In addition to the Rainier slide area, any piece of land within the city limits that is west of Fox Creek and has a slope of 20% or more is included in this slide area. Due to time constraints, it has been deemed appropriate to apply the 2020 adjustments attributed to the Rainier Slide City fees and Engineering fees for this setup year.

The following adjustments should be applied to all vacant properties in the slide area and to all older improved properties that appear to have problems due to being located within the slide area of Rainier.

Rainier Slide – City Fees	\$500
Rainier Slide – Engineering Fees	\$8,525

Riverfront Adjustment - Rainier, Study Area 47

For this assessment year, SA 47 Rainier Riverfront was combined into the City of Rainier (SA 00). Hence, the previous riverfront adjustment analysis was deemed appropriate and will be carried forward for this setup year.

Rainier Riverfront Adjustment	\$54,000
-------------------------------	----------

Transmission Lines – Countywide

A 50% adjustment is made to the value of the portion of land that lays directly under a major transmission line easement. This adjustment is not based on market sales, but rather is made to recognize the limited use and negative market perception of land that lies beneath major transmission lines.

Over Improvement Adjustment

Based on the sales data analyzed, it is recommended to use the square foot improvement adjustments listed below on all Class 6 or better homes for this setup year.

Over 3,500 square feet	-35%
Under 3,500 square feet	-31%

Creek Adjustment

Busy Street Adjustment

There is no measurable data at to support a percentage or fixed amount adjustment for this area identifiers at this time in the following areas:

MA 01 SA 00	MA 04 SA 40	MA 04 SA 45
MA 01 SA 30	MA 04 SA 41	MA 06 SA 31
MA 01 SA 43	MA 04 SA 42	MA 04 SA 56
MA 04 SA 00	MA 04 SA 44	MA 06 SA 01

2 Parcels/Taxlot, 3 Parcels/Taxlot – Countywide

These adjustments are used on non-platted properties where the highest and best use of the property based on location, zoning and access is to divide the property through the partition plat process and sell each parcel individually.

2 Parcels/Tax lot adds 50% of the land value

3 Parcels/Tax lot adds 90% of the land value

Partition Costs - Countywide

This adjustment is added to all properties that have either a 2 or 3 Parcels per Taxlot adjustment. It reduces the total land value by the typical partitioning costs.

Partition Costs adjustment is -\$10,870.
