2015 Ratio Study for Columbia County

Certification & Analysis of  
Valuation Methods and Procedures

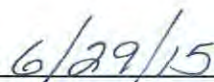

State of Oregon     )  
                                  ) SS.  
County of Columbia )

I, Sue Martin, Assessor of Columbia County, State of Oregon, do hereby certify that I have prepared a ratio study for the current tax year according to ORS 309.200 and guidelines developed by the Department of Revenue, and that the attached is a complete and accurate copy of the original now on file in my office.

I further certify that the ratios and adjustments identified in this study will achieve 100% of real market value for real property and manufactured structures for the current year.

This report is given to the Department of Revenue and will be given to the Clerk of the Board of Property Tax Appeals to provide current knowledge of the adjustment program used by my office.

## 2015 Ratio Study for Columbia County

### Introduction:

The purpose and description of the Ratio Study is:

1. To measure the level of appraised value (RMV) relative to the market value as of the assessment date of Jan 1<sup>st</sup>. For 2015, this is the relationship between the set-up real market values for all re-calculated and re-appraised areas. For those not yet re-calculated or re-appraised, it is the relationship to the prior years real market values and current real market values.
2. To identify the adjustment factors that will achieve 100% of Real Market Value.
3. To document the analysis and decision process.
4. To provide a tool for managing appraisal and adjustment programs.

### Appraisal Areas, Study Areas and Property Classes:

Columbia County is divided into six (6) appraisal areas as illustrated on the County Map located on page 14. These appraisal areas are referred to as Maintenance Areas (MA). Properties within these areas are grouped together for market analysis and adjustment by using study area codes and/or property class codes. Listings of these codes can be found on page 16.

Also referenced on the Area list is Maintenance Area 7. This area is not noted on the County map but is designated for personal property Manufactured Structures located within the County, regardless of location.

### The Ratio Study format:

The format of the Ratio Study is intended to reflect the adjustment program. Most notably are the "Summary of Adjustment and After Ratios" and the "Market Area Conclusion" portions of this study. The remaining sections lend additional support and provide further explanation of the adjustment program.

#### Summary of Adjustments and After Ratios

This summarizes the adjustments by Maintenance Area (MA), Study Area (SA) and Neighborhood (NH). Adjustments are made in general categories by Real Market Value class (RMV class):

1. Residential Urban (RMV class 1XX); Rural Tract (RMV class 4XX or 8XX) - This includes residential land, single family site built dwellings, real property manufactured structures, condominium's, 2-4 unit multi-family properties within the city limits and rural properties which include small rural residential parcels to large farm and forest parcels.
2. Commercial (RMV class 2XX) and Industrial (RMV class 3XX) - This includes

## 2015 Ratio Study for Columbia County

commercial, industrial and multi-family properties appraised by the County in urban or rural locations.

3. Others: this is for properties which do not fit well into any of the categories or may be better reported as a separate group.

### Studies

Following are the essential elements which make up the Ratio Study. They include the individual ratio studies as well as the supporting sales listings and statistics.

1. Market grouping: The assessment system provides for adjusting values by market group using stratification and combination. Stratification means splitting a large group of properties into separate groups based on market differences. Conversely, combination means combining properties from separate groups with similar market characteristics. Study Area (SA) and Property Class groupings are the most common market groupings used in this report. They may define the market by location, type of property or those that have a special use.
2. Study Pages: each study is two or more pages in length and identifies the Real Market Class(es), the Study Areas (SA), shows the calculation of the adjustment and also explains how the factors used in the calculation were selected. Also, each study includes a sales listing with related statistics. The following are the main elements of the first page of the Study:
  - A. Market Identification. This describes the population for which the individual study is done. Typically this is by the RMV class, MA and SA followed by a general description. Most locally assessed properties are identified and a trend conclusion is completed whether or not a sales listing can be generated or a conclusion of "No Trend" is determined.
  - B. Adjustment Calculation Summary. This section identifies the following:
    - (1) The size of the sales sample used.
    - (2) The total size of the population in the study, both in terms of absolute numbers and by percentage.
    - (3) Identifies the values of the population by land RMV, on site development (OSD) RMV, residential improvement RMV and farm improvement (ancillary buildings) RMV as is documented in the Assessor file. These values are shown as dollar amounts and as a percentage of the total RMV for each population by category, both before adjustment and after.
    - (4) The "Selected Ratio from Sales" is the ratio selected from the Mean, Median, Weighted Mean or Geometric Mean. The selected ratio is the ratio which has been determined to provide the "best fit" for the study. Ratio conclusions are based on the following principles:

## 2015 Ratio Study for Columbia County

- a. No one sale should have a large influence on the ratio indications. The objective is to: avoid a Mean distorted by an extreme ratio; avoid a Weighted Mean influenced by high valued properties and to avoid a Median when gaps exist in the middle of the frequency distribution.
- b. Split ratios within a study. Ratios above and below 100 and can be a result of being at or near market. A single trend will result in half the properties being over market and half being under market. A single trend cannot reduce the distribution of ratios within the group.
- c. If an adjustment is clearly needed then it is applied. Likewise, the adjustment with the greatest support is applied.
- d. Reliability is variable: it is dependent on the size of the sample and the variability within the sample. Therefore the ratio indicators (Mean, Median, etc.) lie within a range of reliable conclusions. A useful way to measure reliability is by using confidence interval calculations.

### C. Adjustment Calculation Summary.

- (1) The selected ratio may be adjusted by the results of the time study and this adjusted ratio is then entered. If the time adjustment is used, the adjustment is identified in the explanation portion of the analysis.
- (2) The "Before Ratio" is a measure of RMV assessment at an established point in time for the tax year before any adjustments are applied.
- (3) Overall adjustment factor. This is the adjustment needed to bring the prior years RMV (or the current years re-calculated RMV) to the statutorily required 100% real market value as of the January 1<sup>st</sup> assessment date of the current year. It is calculated by dividing 1 by the Before Ratio. For improved properties, the overall adjustment factor is separated into the following:
  - a. Land Adjustment Factor: the adjustment by which the land portion of a property is adjusted. It usually is the land adjustment factor used in the analysis of unimproved land within the same maintenance area and study area. However, the adjustment may be from the analysis of the improved classes if an insufficient sample is available.
  - b. OSD Adjustment Factor: the adjustment factor which brings the site improvement portion of the property to 100% of RMV. This value is available as a separate component for improved commercial or industrial properties but is included in the land adjustment.
  - c. Residential Improvement Factor: the adjustment factor needed to bring the residential and associated improvements to 100% of RMV as part of the overall adjustment.

## 2015 Ratio Study for Columbia County

- d. Farm Improvement Adjustment: the adjustment factor applied as part of the overall adjustment that will bring outbuildings and other ancillary structures to 100% real market value.
  - e. After Ratio. This tests the County's ratio study program. It measures the valuation to be sure it meets the 100% real market value requirements as outlined in statute.
- D. Explanation. This is a written statement explaining which of the Central Tendency Indicators were selected in order to determine the ratio used in the analysis. If other factors contribute to the conclusion they may be mentioned here.
- E. Performance History. A historical display of performance (valuation).
- (1) Coefficient of Dispersion (COD): The history of COD, if available, from 2011 through 2015. A COD higher than the maximum for the property class and type is an indication that the property class and/or MA may have a valuation problem. The acceptable measurement of uniformity ranges are when the COD percentages are between 10 to 20.
  - (2) Price Related Differential (PRD): The PRD history, if available, from 2011 through 2015. The measurements for vertical equity are:
    - a. A PRD above 1.00 suggests that high-valued properties are under-appraised and low-valued properties are over-appraised (regressive).
    - b. A PRD less than 1.00 suggests that high-value properties are over-appraised and low-valued properties are under-appraised (progressive).
    - c. A PRD that is within a range of .98 to 1.03 are ideal.
- F. Adjustment (Adjusted Overall Ratio). This is an estimate of the level of appraised value (RMV) relative to the market value as of the assessment date of Jan 1st. This is before adjusting the RMV (trending).

### Performance Measures

To measure valuation, the following studies are performed:

1. For most studies there are sales listings (study listings). Each sale in the listing is identified by MA, SA, Neighborhood and Property Class. Once identified, then additional details are provided which more fully described the individual sale properties. Finally, a ratio is calculated for each sale, then statistics are calculated for the entire group and displayed. The major components are as follows:
  - A. Maintenance Area (MA): one of the seven appraisal areas.

## 2015 Ratio Study for Columbia County

- B. Study Area (SA): market identification code.
- C. Neighborhood (NH): not used at this time, current designation is "000".
- D. Real Market Property Class: a three digit number identifying the type of property.
- E. Building Class: the type of main structure included in the sale.
- F. Sale condition code is also referred to as "Reject code" (RJ). Sales are identified by a code illustrating whether a sale is confirmed or not confirmed. The sales codes are as follows:
  - Code 24 Sale price varies from the RMV in excess of expected parameters but no sales review requested.
  - Code 28 The appraised value reflects the results of processing a sales review request.
  - Code 30 Unconfirmed sale from current sales year (verified by recorded instrument only).
  - Code 31 The sale is from a prior sales year (verified by recorded instrument only).
  - Code 32 Confirmed sale from prior sales year (confirmed by seller, buyer or agent).
  - Code 33 Confirmed Sale from current sales year (confirmed by seller, buyer or agent).
- G. Map Number: the Assessor's map and tax lot number. (Note: more than one tax lot may be involved but not displayed.)
- H. Book: the calendar year in which the document that transferred title to the property was recorded.
- I. Page: the recording number identifying the document that transferred title to the property.
- J. Acres: the land size expressed as acreage, if recorded in the Assessors file.
- K. RMV Land: the prior year appraised/trended land value.
- L. RMV Imp: the prior year appraised/trended improvement value.
- M. Total Value: the sum of the RMV land and RMV improvement. This is usually the total RMV from the assessment records. In some cases it is the value which would have been in the records if the property had not been changed

## 2015 Ratio Study for Columbia County

(remodeled, subdivided, etc.) since the date of sale.

- N. Sales price: the sale price of the property as of the date of sale.
  - O. Sale date: the month and year the property sold.
  - P. Sale Number: within each listing, the sales are arrayed in an ascending order by ratio and each is identified with a number.
  - Q. Ratio: a comparison of the total appraised value to the sale price which is expressed as a percentage without the decimal point (total RMV/Sale price = Ratio). This indicates the level of appraised value relative to the market value of the property.
2. Explanation of statistics: As with all statistical analysis, the accuracy of the conclusions depend on adequate size samples which accurately represent the population. Judgements about grouping properties to get reasonably accurate results are based primarily on creating adequate minimum sample sizes or on Study Areas which have been determined to have moved similarly in the market. The descriptive statistics are found on the second page of each Ratio Study grouping. These are split into "Statistics of Central Tendency" and "Statistics of Distribution".
- A. Statistics of Central Tendency measures the center, middle, or typical element in a group. These are assumed to generally reflect the level of appraised value (RMV) relative to market value. However, they must be analyzed in some detail and context to produce reasonably accurate trend conclusions. These statistics are found in numeric form on the second page of each study are listed with the Statistics of Distribution. The Central Tendency statistics are also presented in graph form near the center of the second page. These central tendency measurements are comprised of the following:
    - (1) Median: the ratio value with the same number of ratios above as below. Those listings which display sizable gaps near their center may have an unreliable median.
    - (2) Mean (arithmetic mean): traditionally called the average, it is the sum of all ratios divided by the number of ratios. The Mean is distorted by extremely high or low ratios.
    - (3) Weighted Mean: the sum of the total RMV divided by the sum of the total sales prices. The sales with relatively high values or prices will have the most effect on this measure.
    - (4) Geometric Mean; the "Nth" root of the product of the ratios, where "N" is the number of ratios in the array.
  - B. Statistics of Distribution: this performance measurement describes how values are distributed within the group. Essentially, how far ratios are from a central

## 2015 Ratio Study for Columbia County

tendency. Distribution characteristics tend to indicate the accuracy of RMV and the consistency of the marketplace. Ratio studies in Columbia County are usually (by necessity) done with a rather limited numbers of sales. Therefore, care must be taken not to “read too much” into the distribution statistics from these studies. Drawing conclusions about distribution from relatively small samples may be unreliable.

- (1) Frequency Distribution: a listing used to visually display the distribution of sale by ratio range. This list appears on the second page of each individual study and is displayed in graph and numeric form.
  - (2) Average Deviation (AD): the average of the differences between each ratio and the Median for the entire group.
  - (3) Coefficient of Dispersion (COD): the average deviation converted to a percentage.
  - (4) Standard Deviation (SD): a measure of deviation from the Mean for a normally distributed population. For this statistic to be useful, the population and the sales sample must meet relatively strict statistical standards. Therefore, it is considered less useful for “typical” appraisal standard analysis than the COD.
  - (5) Coefficient of Variance (COV): the standard deviation converted to a percentage.
  - (6) Price Related Differential (PRD): a measure of “vertical equity”. It is calculated by dividing the mean by the weighted mean.
    - a. Regressive: a PRD of greater than 1.00 indicates that higher priced properties are under appraised relative to moderate or low priced properties.
    - b. Progressive: a PRD of less than 1.00 indicates that lower priced properties are under appraised relative to the moderate or higher priced properties.
    - c. If the PRD is between .98 and 1.03, the degree of bias (vertical equity) is not considered significant.
  - (7) 95% Confidence Interval: a calculation of uniformity used to determine the reliability that the array is representative of the population. This number is expressed as a percentage. The lower the percentage the greater the reliability. Conversely, the higher the percentage the lower the reliability.
- C. Currently, the “working” statistical standards are as follows:
- (1) Real Market Value = 100%

## 2015 Ratio Study for Columbia County

(2) COD standards are:

Vacant Land (property class 100, 400)	20%
Real & Personal Manufactured Homes	25%
Urban Residential (property class 101, 109)	
Homogeneous	10%
Non-homogeneous	15%
Rural Improved (property class 401, 409)	20%
Apartments (property class 701)	12%
Commercial Improved (property class 201)	
Larger/Urban	15%
Smaller/Urban	20%
Industrial	no standard has been set

(3) The PRD standard is from .98% to 1.03%

### Specially processed values

Not all assessed values are adjusted in the manner described in this report. Specially assessed values (Farm or Forest Deferred), certain personal property values and many industrial property values are recalculated or processed specially annually. The ratio study does not report these values. It does however, indicate how the RMV of farm and forest deferred properties will be adjusted.

Status of the Assessor's adjustment program:

The Columbia County Assessor and staff will continue to review market information until the actual changes are made to the roll. It is possible that additional data and further analysis will lead to conclusions different than those contained in this report.

The Assessor must make those adjustments which are indicated by reliable market data to produce the most accurate appraisals possible. Any future modification to the adjustment factors in this report will be reported to the Department of Revenue and will be documented in the modifications section of this study.

STUDY**

## 2015 Ratio Study for Columbia County

Property sales within Columbia County from January 1, 2014 through December 31, 2014 were analyzed to determine an adjustment for change over time (time adjustment). These sales were separated into two groups:

1. RMV class 100, 101, 102 and 109. These are properties located within the city limits of St. Helens & Columbia City (MA 1), Scappoose (MA 2), Vernonia (MA 3), Rainier (MA 4) and Clatskanie (MA 5).
2. RMV class 400, 401, and 409. These properties are located outside the city limits within each maintenance area.

### Conclusions:

The analysis for Urban Residential Property (RMV Class 100, 101 and related classes) indicates an adjustment of 104% is needed for all areas.

For Rural Residential Property in all maintenance areas (RMV Class 400, 401 and related classes), the time study analysis substantiates a 97% adjustment.

Commercial and Industrial property (RMV Class 200, 201, 300 and 301) had too few property sales to provide a reliable indication of change over time. Therefore, no time adjustment is supported for these properties.

The conclusions found on this page for this time adjustment study are supported by the subsequent pages.

### How the conclusion from the time adjustment is applied in the Ratio Study:

1. The indicator of Central Tendency considered most appropriate is selected.
2. Once the Central Tendency is selected, it is then adjusted by the conclusion from the time study.

For example: for MA 1, SA 00, PC 101; the Median of 90 is selected. Next, multiply the adjustment by the conclusion from the time study (104) which then results in 94.

3. The product of this calculation (94) is then entered on the "Selected Ratio From Sales" line found on the first page of each section of the analysis.

## 2015 Ratio Study for Columbia County

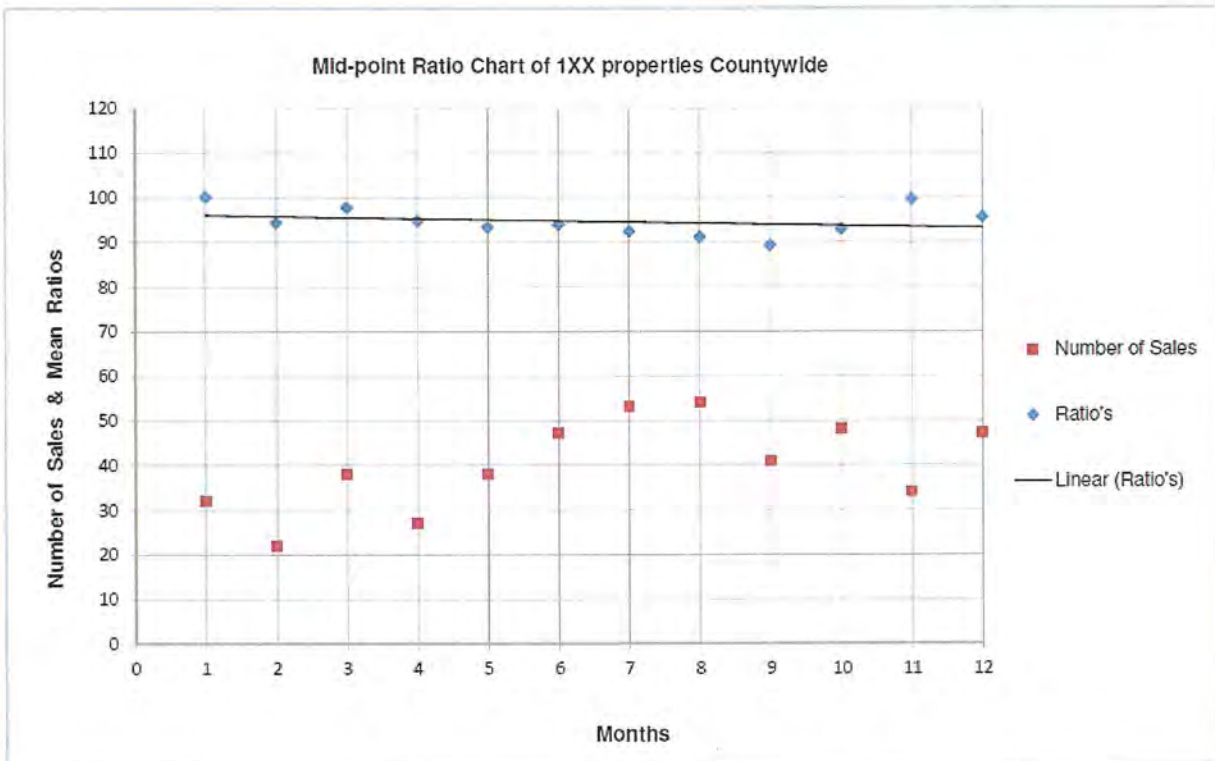

### Historical Time Adjustment Conclusions

Following are the factors used to adjust "mid months" when prior year sales are used.

<u>Time Period</u>	<u>RMV Class 101</u>	<u>RMV Class 401</u>
1997-2005	None	None
2006	96.5%	94.2%
2007	None	None
2008	None	None
2009	92%	None
2010	99%	99%
2011	90%	89%
2012	103%	98%
2013	98%	93%
2014	97%	106%
2015	104%	97%

## 2015 Ratio Study for Columbia County Time Study for RMV Classes 1XX

					Ratio for Month			# Sales	Cumulative Sales for Month		
					Mean	Median	GeoMean				
Quarter 1					1	Jan	100	102	99	32	32
Mean 1	Median 1	GeoMean 1	92	92	2	Feb	94	96	93	22	54
98	97	97			3	Mar	98	95	97	38	92
Quarter 2					4	Apr	95	93	94	27	119
Mean 2	Median 2	GeoMean 2	112	204	5	May	93	94	92	38	157
94	94	93			6	Jun	94	94	93	47	204
Quarter 3					7	Jul	92	92	91	53	257
Mean 3	Median 3	GeoMean 3	148	352	8	Aug	91	88	90	54	311
91	90	90			9	Sep	89	88	89	41	352
Quarter 4					10	Oct	93	93	92	48	400
Mean 4	Median 4	GeoMean 4	129	481	11	Nov	100	96	98	34	434
94	93	93			12	Dec	96	93	94	47	481
Total Sales			481		Total Sales			481			

Analysis: The mid-point of the sales is found to be July (the 7<sup>th</sup> month), with a corresponding Mean ratio of 92. The Jan 1, 2015 (end of Dec. 2014) trend line Mean ratio is 96. Therefore:  $(96-92)/92=.043$  or 4%;  
 $100 + 4 = 104$

Conclusion: The time adjustment for RMV Class 1XX properties is 104%

Mean 3	Median 3	GeoMean 3	43	117	7	Jul	99	101	98	8	82
98	97	96			8	Aug	96	96	93	17	99
Quarter 4					9	Sep	99	97	98	18	117
Mean 4	Median 4	GeoMean 4	42	159	10	Oct	111	107	106	13	130
100	95	96			11	Nov	88	86	85	7	137
Total Sales					159					22	159
										Total Sales 159	

**Analysis:**

The mid-point of the sales is found to be July (the 7<sup>th</sup> month), with a corresponding Mean ratio fo 97. The Jan 1, 2015 (end of Dec. 2014) trend line Mean ratio is 94.

Therefore:  $(94-97)/97 = -.031$  or -3%

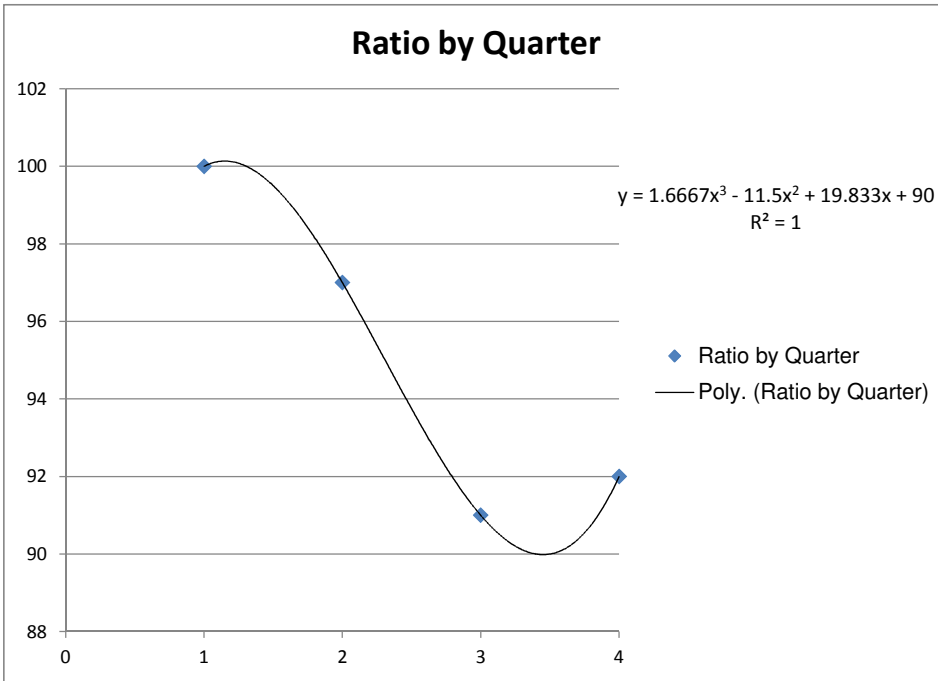

$$100 - 3 = 97$$

**Conclusion:** The time adjustment for RMV Class 4XX properties is 97%

**GROUPING ANALYSIS  
AND  
STUDY AREAS  
LIST**

## 2015 Ratio Study for Columbia County

Maintenance areas as well as some study areas and/or property classes have moved within the market in such a similar manner that they were combined in the individual Ratio Study. Also, other study areas and/or property classes may have been combined to improve the sale samples in order to arrive at a more reliable conclusion.

Study areas and/or property classed were analyzed separately if:

1. The data indicated that an individual study area and/or property class had sufficient data to arrive at a reliable conclusion and
2. The sales within those areas indicated that it would not be reasonable to combine them with another area and/or class.

If study areas and/or property classes are combined, then they have been identified in the individual ratio study.

Study Areas by Maintenance Areas:

### AREA 1 - City of St. Helens and City of Columbia City

00 Undefined (SH)	30 Duplex, Triplex, Fourplex (SH)	60 Island (Columbia River)
01 Undefined (CC)	31 Duplex, Triplex, Fourplex (CC)	78 Large Industrial
15 River Front (SH & CC)	43 TwHse, Row House & Common Wall	95 Floating Homes & Combos
21 McBride Meadows, Sophie Park (CC)	44 TwHse, Row House & Common Wall	97 Boathouses & Misc. Imps

The following Study Area's have been combined into Study Area 00 for 2015:

71-Highway Commercial (SH); 72-Uptown Commercial (SH); 73-Downtown Commercial (SH); 74-Spot Commercial (SH,CC)

### AREA 2 - City of Scappoose and Rural Vicinity (South Warren; Chapman; Dutch Canyon)

00 Undefined	33 TwHse, Row House & Common Wall	79 Keys Landing, Keys Crest
06 Forest Value Zone	41 Sauvie Island (NH 21 values)	80 Columbia River View Estates
21 Value Zone 1 (100%)	45 Dike Land (Sauvie Island)	85 Meersburg PC
22 Value Zone 2 (70-85%)	60 Island (Columbia River)	95 Floating Homes & Combos
23 Value Zone 3 (50-60%)	62 Freeman Road	97 Boathouses & Misc. Imps
25 Dike Land (Scappoose)	63 Columbia Acres	
28 Duplex, Triplex, Fourplex (City)	64 Hillcrest	

The following Study Area's have been combined into Study Area 00 for 2015:

11-Commercial, Havlik Road area (City); 12-Commercial, SW Central Highway (City); 13-Commercial, NW Highway (City); 14-Commercial, East of Highway (City); 15-Spot Commercial (City/County)

### AREA 3 - City of Vernonia and Rural Vicinity (Keasey; Pittsburg; Natal; Mist; Birkenfeld; Fishhawk)

00 Undefined	31 Value Zone 1	39 Roseview Heights
03 Flood Impacted area (City)	36 Fishhawk Lake Estates	39 Heather Park
06 Forest Value Zone	37 Berndt's Creek	40 Duplex, Triplex, Fourplex (City)

## 2015 Ratio Study for Columbia County

**AREA 4 - City of Rainier and Rural Vicinity (Shiloh Basin; Goble; Prescott; Lindberg; Apiary; Fern Hill)**

---

00 Undefined	44 Prescott	60 Island (Columbia River)
06 Forest Value Zone	45 Dike Land	95 Floating Homes & Combos
41 Value Zone 1	46 Riverview Drive, Maple Drive	97 Boathouses & Misc. Imps
42 Value Zone 2	47 Riverview Drive, Maple Drive	

**AREA 5 - City of Clatskanie and Rural Vicinity (Swedetown; Alston; Delena Mayger; Marshland; Woodson)**

---

00 Undefined	55 Dike Land	97 Boathouses & Misc. Imps
06 Forest Value Zone	60 Island (Columbia River)	
51 Rural Value Zone	95 Floating Homes & Combos	

**AREA 6 - Rural St. Helens and Columbia City (Warren; Yankton; Trenholm; Deer Island; Canaan)**

---

00 Undefined & Commercial So. of Col. City	61 Value Zone 1	65 Dike Land
04 Commercial No. of Col. City	62 Value Zone 2	78 Large Industrial
06 Forest Value Zone	63 Value Zone 3	95 Floating Homes & Combos
60 Island (Columbia River)	64 Value Zone 4	97 Boathouses & Misc. Imps

The following Study Area has been combined into Study Area 00 for 2015:

71-Highway Commercial (South SH) and now referred to as "Commercial, South of Columbia City"

The following Study Area has been created for 2015:

04-Commercial (North of Columbia City)

**AREA 7 - Personal Property Manufactured Structures, County Wide**

---

01 PP MS in MA 1 General Area	02 PP MS in MA 2 General Area	03 PP MS in MA 3 General Area
except for the following:	except for the following:	04 PP MS in MA 4 General Area
SA 27-Crestwood Village	SA 30 - Springlake Park	05 PP MS in MA 5 General Area
SA 28-Columbia City Estates	SA 31 - Crown Park	06 PP MS in MA 6 General Area

# SUPPLEMENTAL NOTES

## 2015 Ratio Study for Columbia County

### **Manufactured Home Parks:**

These properties (PC 207) are located county wide and have been appraised based on income.

### **Re-Appraisal of Commercial properties:**

At the time of this report, a re-appraisal of commercial vacant and improved properties is in process. The sales used in the Ratio Study for the Commercial analysis have been re-appraised.

### Explanation

Central tendency selected is the Median of 88 multiplied by the 1XX Time Adjustment of 104 which equals 92 for the Selected Ratio from the Sales Array. The result is an Overall Adjustment Factor of 109.

#### Explanation

Due to having no sales for the Scappoose and Sauvies Island Dike Land area, the selected ratio of 91 and overall adjustment factor of 110 from the undeveloped rural land study was applied here. This conclusion is from the analysis of Study Areas 21 (Rural Value Zone 1), 22 (Rural Value Zone 2), 23 (Rural Value Zone 3), 41 (Sauvies Island), 62 (Freeman Rd), 63 (Col. Acres) and 64 (Hillcrest).

#### Explanation

There were no sales to analyze for the Scappoose Dike Land and Sauvie Island Dike Land area. Therefore, it was determined to use the improved land selected ratio (91) and overall adjustment factor (110) from the Rural land analysis of Study Areas 21 (Rural Value Zone 1), 22 (Rural Value Zone 2), 23 (Rural Value Zone 3), 41 (Sauvie Island), 62 (Freeman Rd), 63 (Col. Acres) and 64 (Hillcrest).

### Explanation

Located within the City of Vernonia, this study area is comprised of vacant land which was impacted by the flood of 2007. Having no sales of undeveloped land in this area, it was determined the conclusion from the Vernonia City general unimproved study would be applied here (Selected 87, Overall Adjustment Factor 115).

### Explanation

Located within the City of Vernonia, this study area is comprised of properties which were impacted by the flood of 2007. Because of the unique nature of how these properties move within the market, it is an area to watch as the market influences change. The Median of 84 was selected and was adjusted by the conclusion from the time study (104).

### Explanation

There were no useable sales for this analysis. Therefore, the conclusion from the Vernonia City general unimproved properties was used (Selected the Median of 84 x 104 = 87)

### Explanation

This area is a small subdivision located in the City of Vernonia and developed using manufactured structures and various accessory items/outbuildings. It is recommended to maintain the current study area to watch for market changes in the future. However, there are too few sales at this time to conduct an analysis for the current year. Therefore, the City of Vernonia general study area Median (93) ratio was used and then adjusted by the conclusion from the time study (104) resulting in a 'selected ratio from sales' of 97.

### Explanation

There are no useable sales available for analysis. The Fishhawk Lake Estates area is distinctive because of the nature of the market: recreational lake properties, vacation properties, second home properties, etc. Because of this uniqueness, the analysis for the Rural Vernonia General area is not representative and not applicable. Therefore, it is decided to use the conclusion from the improved Fishhawk Lake Estates study with having 107 for the Selected Ratio and an Overall Adjustment Factor of 93.

### Explanation

Having no sales available for the improved Berndt's Creek area, the "Selected Ratio from Sales" from the RMV class 401 & 409 SA 00 & SA 31 of 97 was used. The "Land adjustment factor" from the conclusion of the vacant land analysis for Berndt's Creek of 95 was also applied.

### Explanation

There was one sale available for the Rainier Riverfront Estates which is not sufficient for analysis. Therefore the analysis and conclusions from the improved general Rainier City, Riverview Drive and Maple Drive were applied to this area.

### Explanation

The conclusion from the improved property SA 41 and SA 42 analysis is deemed the most reliable for this grouping of unimproved properties due to the limited number of sales available for analysis.

#### Explanation

This study area is comprised of odd lots located within the incorporated areas of Columbia County. They have been identified as having minimal value dues to size and/or shape. The improvement values displayed are for paving and are considered to be of little importance. Therefore, it was deemed no adjustment was warranted for these properties.

### Explanation

There were 6 useable floating property sales for analysis resulting in a 2.15% sample size. These properties have varying uses; from primary residences to second homes and from recreational use to semi-boat storage. Because of this unique nature, there is some difficulty in conducting an analysis. The analysis is further complicated by the manner in which sales are reported (via personal property returns). It has been determined the Median of 118 would be the most reasonable central tendency to apply here.

#### Explanation

These island properties are located on the Columbia River. They have little or no marketability due to access and development limitations. The majority of these properties are owned by governmental agencies and are non-assessable. Therefore, it is recommended not to apply an adjustment to the values for this year due to these issues. Note: the 200 RMV classes in this analysis are the non-assessable properties owned by State or Federal agencies.

### Explanation

This grouping of Highest and Best Use Forestland properties are typically large tracts of land located away from arterial and collector roads. Most will have topography and access limitations which hinder usability. Real Market Values for these properties are applied each assessment year and are based on the Designated Forest Land values provided by the Department of Revenue annually. There is one account which has an improvement on it for equipment storage but is of little value and impact is minimal. Historically little sales activity is associated with these properties and therefore no adjustment is recommend.

DIFFERENTIAL

AREAS OF CONCERN

**COLUMBIA County 2015 Ratio Study**  
**Coefficient of Dispersion**

Following are the Coefficients of Dispersion by Maintenance Area, Study Area and RMV Class from the sales date of January 1, 2014 through December 31, 2014. This is the sales study period used in the 2015 Ratio Report.

**Current COD Standards:**

Type of property (RMV Class)	Maximum COD
Vacant Land (100, 400)	20
Real & Personal manufactured structures	25
Urban residential (101)	
Homogenous	10
Non-homogenous	15
Rural Improved (101, 401)	20
Apartments (701)	12
Other Income (201)	
Large urban	15
Smaller rural	20

**Columbia County's COD areas of concern:**

Maintenance Area	Study Area(s)	RMV Class(es)	COD	Maximum Standard COD	Prior Year COD	Location
All	95 & 97	111	25	Unknown	32	Floating Property, County wide
All	General	019	37	25	23	PPMS
All	All	201	21.23	20	15.07	Commercial Improved, county wide

The Coefficient of Dispersion for the properties listed above have exceeded the current standards. Each of the areas listed have unique characteristics or market influences the need recognition.

Maintenance 1, Study Area 00 is vacant land located in the City of St. Helens. There were 10 useable sales, with characteristics that were similar. However, It is worth noting the sales price of each property varied widely. It is also worth noting there wasn't a COD for the prior year to compare to. The St. Helens area will be re-appraised within the next two years.

There were only 5 useable sales for the the Floating Properties (Floating homes, Boathouses and Combinations) study. This study is comprised of differing improvements which are , at times, complex and unique in nature. Also, change of ownership/sales data is not reliable as it is not provided timely and/or not provided at all.

The personal properties located within the general area county wide are also a unique market to analyze. There were 29 useable sales to study, with varying sales prices which skewed the resulting COD. It is recommended that this area be given closer scrutiny during the 2016 setup.

Currently the Commercial properties are undergoing re-appraisal. There were 12 improved commercial sales this last year. It is anticipated the re-appraisal and the set up will remedy the COD issue.

COLUMBIA County 2015 Ratio Study  
Price Related Differential

Following are the Areas of Concern for the Price Related Differential (PRD) by Maintenance Area, Study Area and RMV Class. This data is from the sales file dated January 1, 2014 through December 31, 2014 and has been used in the 2015 Ratio Report.

Maintenance Area	Study Area	Property Class	PRD	Under .98	Over 1.03	Location
01	00	100	1.11		X	St. Helens City, Vacant Land
03	03	101	1.05		X	Vernonia, City, Flood Area
03	31	400	1.04		X	Vernonia, Rural Value Zone 1, Vacant Land
03	31	401	1.06		X	Vernonia, Rural Value Zone 1, Improved
04	41	401, 409	.97	X		Rainier, Rural Value Zone 1, Improved
ALL	00	201	1.15		X	Commercial County wide, Improved
ALL	ALL	111	1.38		X	Floating Property, County wide
ALL	General	019	1.11		X	PPMS

If the PRD is over 1.03, then the PRD is regressive. This means the low-value properties are overvalued and high-value properties are undervalued.

When the PRD is below .98, then the properties are considered progressive. This means the high-value properties are overvalued and low-value properties are undervalued.
